We – the European GMO-Free Citizens and the Ekopark Foundation in Lelystad (the Netherlands) – do not wish to eat this genetically modified maize. We want to eat unsprayed food that has not been genetically manipulated. This is also better for the environment.

Nor do we want genetically modified maize as animal feed. And we do not want you to put it on the EU market. If you were to approve it (which we would regret), we would want every product and every end product to be labelled as a GMO, even if GMOs can no longer be

detected in an end product.

See all our comments on GM maize of an earlier date.

Hi,

You ask our advice on a stacked GMO. The more stacking there is, the more pollutions there will be. Since we do want to know what we eat we may not agree with such an authorization.

Moreover we do contest the advice of EFSA. let me explain why. This institution is sometimes considered as a scientific one. Yet even though it is made of scientists, it is headed by administrative ones (even if they used to be researchers). Why it is different ? Because a scientist doubts of himself (in his lab ... less when in a workshop and even less before TV). He tests his assumptions. An expert asserts Truth. He is the grand-priest of our modern religion : Science.

And it happens that, based on the very same files, the French equivalent does advise to reject up to 80% the GMOs while the European EFSSA advises to accept up to 70%. So, even with the very same files, the "scientists" can disagree.

Let me stress that you are also weakening the authority of science, paving the way for complotism ... The Commission and the way it uses the EFSSA is spoiling the confidence one may have in Science. Who will we believe if there is no more authority ?

Faking our food will also fake our policies and even our politics. In the meanwhile it fakes our words. I've read an article saying Ec wants to regulate new GMOs while it intends to deregulate almost all of them.

Sincerely
