

Eradication: Final report for Avian Influenza 2018

For each approved annual or multi-annual programme Member States shall submit to the Commission by the 30 April each year an annual detailed technical and financial report covering the previous year. That report shall include the results achieved and a detailed account of eligible costs incurred (Art 14 of Regulation (EU) No 652/2014).

This form is for information only, no submission possible.

ID: 20190422-2V9GLXME

Country code: ES

Reporting period

From: 2018

To: 2018

Year of implementation: 2018

1. Technical implementation of the programme

1.1 Description and evaluation of the evolution of the epidemiological situation, the technical implementation of the activities foreseen under the programme and the cost-effectiveness of the programme.

During 2018 no notifiable Avian Influenza has been detected through the surveillance programme. 1 sample have proved positive to non notifiable subtypes in wild birds of avian influenza virus, but these results have not epidemiological relevance.

1.2 Details on the level of achievement of the targets set in the approved programme and technical difficulties.

The targets set in the approved programme have been achieved in chicken breeders, free range laying hens, laying hens, fattening ducks, turkey breeders, fattening turkeys, farmed game birds (gallinaceous) and geese breeders in which it have been tested the number of samples planned.

1.3 Epidemiological maps for infection and other relevant data on the disease/activities (information on serotypes involved,...) (Please attach files of data using the PDF attachment feature) Use the textbox below to provide clarifications for the maps you attach, if needed.

Not applicable.

2. TECHNICAL IMPLEMENTATION OF THE PROGRAMME ON AVIAN INFLUENZA

VERY IMPORTANT: Please fill out the following tables with figures corresponding to measures performed during the implementing period (1/1 to 31/12).

In the column "Total number of samples taken", please put 0 if the same samples have already been counted for another laboratory analysis (example : for HI-H5 and HI-H7 test, only 1 sample should be counted).
