# CSF control strategy in domestic pigs

## Categorization of farms based on bio-security level

- Industrial farms
- Family farms type A (bio-security in place)
- Family farms type B (poor bio-security)
- Backyards (poor bio-security)
- East-Balkan pigs (under special control program of veterinary service)

## Active surveillance

- Clinical surveillance to detect clinical cases of CSF as early as possible and submission of check lists data into the national database;
- Serological and virological surveillance

## Passive surveillance

# Surveillance in domestic pigs in 2014

## At herd level- active surveillance (clinical examinations and check lists)

Region	Total number of herds	Total number of herds under the programme	Number of herds checked	Number of positive herds	Indicators			
					Number of new positive herds	Number of herds depopulated	% positive herds depopulated	% herd coverage
BG	28 143	28 143	8 311	0	0	0	0	29,53

## At individual level – serological testing

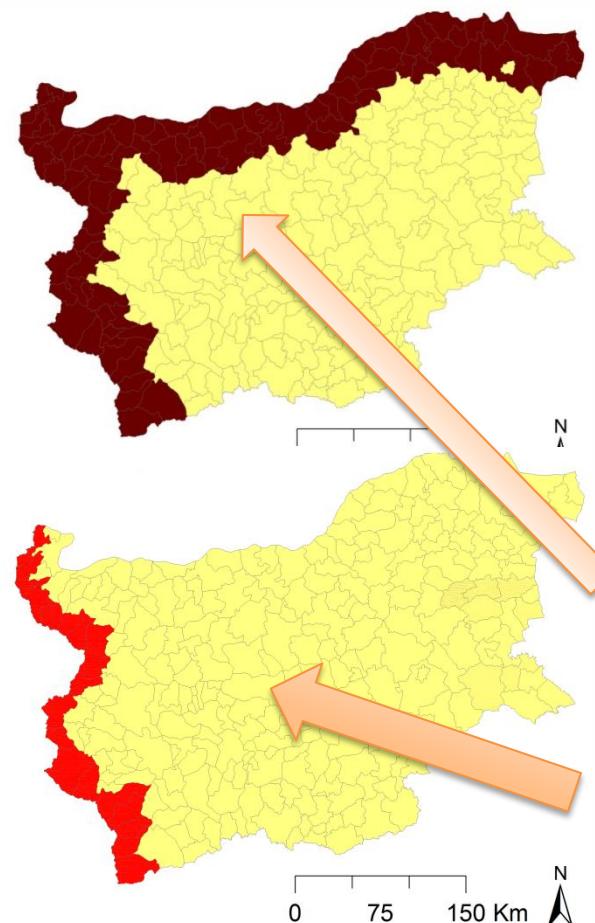

Region	Total number of herds	Number of animals tested	Number of animals tested individually	Number of positive animals	Slaughtering		Indicators		
					Number of animals with positive results slaughtered	Total number of animals slaughtered	% coverage at animal level	% positive animals - prevalence	
BG	28 143	526 426	7 227	7 227	0	0	0	1,37	0

# CSF control strategy in wild boar

## Oral vaccination of wild boar

- ❖ **2005 – 2008** – Two vaccination campaigns with 2 bites distributions in 14 days for each per year. Only the last vaccination campaign in 2008 was carried out within 40 km zone along the west and north borders of the country
- ❖ **2009 – 2012** - Three vaccination campaigns with 2 bites distributions in 14 days within **40 km zone along the west and north borders** of the country
- ❖ **2013 – 2014** - Three vaccination campaigns with 2 bites distributions in 14 days within the **municipalities along the west and north borders** of the country
- ❖ **2015** - Three vaccination campaigns with 2 bites distributions in 14 days within the **municipalities along the west borders** of the country

## Surveillance for CSF in wild boar

Testing of organ and blood samples from shot/found dead wild boar for presence of CSF field virus and antibodies induced by vaccination.

# Surveillance in wild boar in 2014

Animals tested serologically									
Region	Approximate number of herds	Estimated number of animals to be tested under the programme	Number of animals tested*	Number of animals tested individually	Number of positive animals	Slaughtering		Indicators	
						Number of animals with positive results	Total number of animals slaughtered	% coverage at animal level	% positive animals - prevalence
BG	5 325	6 178	3 829	3 829	375**	0	0	61,98	9,79

\*\*animals found sero-positive due to vaccination in vaccination areas

Animals tested by PCR									
Region	Approximate number of herds	Estimated number of animals to be tested under the programme	Number of animals tested*	Number of animals tested individually	Number of positive animals	Slaughtering		Indicators	
						Number of animals with positive results	Total number of animals slaughtered	% coverage at animal level	% positive animals - prevalence
BG	5 325	6 178	6 506	6 506	0	0	0	105,31	0
