SUBJECT Protection of animals during transport - report for 2011

Dear Director-General,

Please find enclosed the annual report on the protection of animals during transport (regulation 1/2005) for the year 2011.

Inspections during transport by road: 33 vehicles have been inspected during missions of the FASFC (Federal Agency for the Safety of the Food Chain) in cooperation with the police. 3 of these vehicles were found to be in non-compliance. The number of animals present in these vehicles is not noted during these missions. These figures concern only the inspections that were organised by the central level of the FASFC. In addition, there are also roadside inspections by the provincial units of the FASFC, also in cooperation with the police. No statistics are recorded concerning the inspections by the provincial units, but the target is one vehicle a month.

Inspections at the place of destination: These are the inspections that are carried out at the slaughterhouses. Transport checks at slaughter house are executed by private veterinarians that have a contract with the FASFC. At least 5 % of all incoming trucks (with a minimum of 1 truck a day) are inspected. Because of the large amount of checklists these are not put in the electronic system individually, but each fortnight the veterinarians send a summary to the FASFC which is put in instead.

Inspections at markets: There are no markets for pigs, domestic birds or rabbits that take place in Belgium.

Markets employ a veterinarian who is tasked with verifying that the legislation is complied with. These veterinarians also report to the FASFC. The infringements that are reported are those that are noted by these veterinarians. They concern notably animals that were not fit for transport.

Inspections at the place of departure: All animals destined for export for which a certificate is mandatory, are inspected at their place of departure by a private veterinarian that has a contract with the FASFC. If any infringements are detected the animals are not allowed to leave. There is no record keeping of the cases for which a certificate was refused.

Inspections at staging points: There were no inspections in 2011.

Inspections at transfer points: There are no transfer points in Belgium

The official inspectors from the FASFC also carry out a supervision of the work of the veterinarians in the field, during which time they also complete checklists that are put in the electronic database. However, the results of these inspections were not put into the table because it was not noted whether these inspections have taken place at a slaughterhouse, an assembly centre or somewhere else. This checklist is now adapted, so it should be possible to include this information in the table next year.

Total number of vehicles inspected: 827

	Bovine	Porcine	Small ruminants	Equidae	Poultry and rabbits
Number of vehicles inspected	461	257	18	11	80

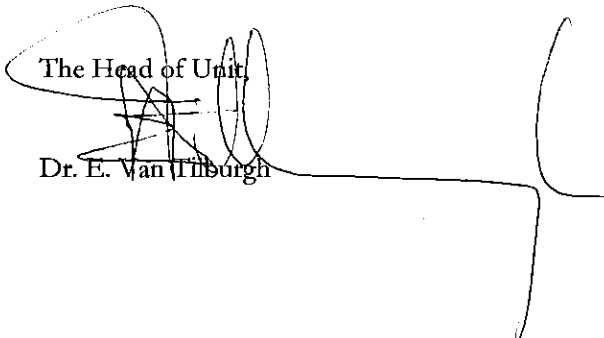

Total number of vehicles with infringements: 94

	Bovine	Porcine	Small ruminants	Equidae	Poultry and rabbits
Number infringements concerning documents	105	15	5	10	8
Number of infringements concerning the vehicle	33	7	1	4	6
Number of infringements concerning loading	9	0	0	0	0
Number of infringements concerning fitness for transport	4	0	1	1	0

Actions for the future:

- A training on the welfare of animals during transport was organized for the inspectors of the FASFC in June 2012 in Dutch and will be repeated in September 2012 in French. This training included the following subjects: general concepts of animal welfare during transport, requirements of the vehicle, fitness for transport, driving and resting times and the use of the satellite navigation system. In a follow-up to this training written guidance will be issued on the satellite navigation system and the ventilation in the vehicle.

Yours sincerely,

The Head of Unit  
  
Dr. E. Van Tilburg
