About this dossier

Output on: 2021/02/01 15:51 Status: closed (submitted) (Europe/Luxembourg) Created: 2020/05/12 16:42

Last updated: 2021/01/29 16:04

Eradication: Final report for African Swine Fever 2019

For each approved annual or multi-annual programme Member States shall submit to the Commission by the 30 April each year an annual detailed technical and financial report covering the previous year. That report shall include the results achieved and a detailed account of eligible costs incurred (Art 14 of Regulation (EU) No 652/2014).

This form is for information only, no submission possible.

ID: 20200512-EGWER6PW

Country code: PL

Reporting period

From: 2019 To: 2019 Year of implementation: 2019

1. Technical implementation of the programme

1.1 Description and evaluation of the evolution of the epidemiological situation, the technical implementation of the activities foreseen under the programme and the cost-effectiveness of the programme.

In 2019 in Poland, there were 48 outbreaks of ASF detected in pigs. ASF outbreaks were recorded in Mazowieckie, Lubelskie, Podlaskie and Warmińsko-Mazurskie voivodships.

In 2019 ASF there were no outbreaks in pigs in previously ASF-free voivodships. Also there were no more outbreaks in Podkarpackie voivodship in comparison to 2018.

In comparison with previous year the total number of outbreaks decreased significantly from 109 to 48. In every outbreak the epidemiological investigation was performed, pigs in outbreaks and protection zones were sampled.

In 2019 cases of ASF in wild boars were first confirmed in Dolnośląskie, Lubuskie and Wielkopolskie voivodships.

In comparison with previous year the total number of ASF cases in wild boars decreased significantly from 3347 to 2477.

In order to limit the possibility of transferring diseases sanitary hunting was carried out in the following voivodships: Dolnośląskie, Kujawsko-Pomorskie, Lubelskie, Lubuskie, Łódzkie, Małopolskie, Mazowieckie, Opolskie, Podkarpackie, Podlaskie, Pomorskie, Świętokrzyskie, Warmińsko-Mazurskie and Wielkopolskie.

Due to the spread of the occurrence of ASF virus, the boundaries of the protection zone, danger zone and restricted areas have changed throughout 2019. There is a clear tendency of expansion of the abovementioned zones towards the west.

1.2 Details on the level of achievement of the targets set in the approved programme and technical difficulties.

As a part of the implementation of the ASF program for 2019, training was conducted for farmers and hunters as well as stakeholders conducting supervised activities related to the production of food of animal origin and fodder.

In order to limit the existence of the virus in the environment, dead feral pigs removal was carried out. In order to reduce the population of wild boars, sanitary hunting and selective hunting of female boars was made.

In connection with intensive sanitary culling, the number of containers for storing carcasses of shot boars planned for 2019 proved to be insufficient.

1.3 Epidemiological maps for infection and other relevant data on the disease/activities (information on serotypes involved,...) (Please attach files of data using the PDF attachement feature) Use the textbox below to provide clarifications for the maps you attach, if needed.

Map – the range and specifics of zones valid for the day of 31.12.2019 can be find under following link: https://bip.wetgiw.gov.pl/asf/mapa5/

2. Tables for SWINE DISEASES PROGRAMMES monitoring outcome of the year VERY IMPORTANT: Please fill out the following tables with figures corresponding to measures performed during the implementing period (1/1 to 31/12)

Table A - DISEASE SURVEILLANCE IN DOMESTIC PIGS

Region	Number of clinical examined holdings	Number of farms sampled	Type of farm	Number of animals sampled	Number of farms with serologically positive result	Number of farms with active infection detection	Number of outbreaks
