

EUROPEAN COMMISSION
HEALTH & CONSUMERS DIRECTORATE-GENERAL
Unit 04 - Veterinary Control Programmes

SANCO/3934/2008

Programmes for the eradication, control and monitoring of certain animal diseases and zoonoses

Multi-annual programme for the eradication of Rabies

Approved* for 2009 by Commission Decision 2008/897/EC

Latvia

* in accordance with Commission Decision 90/424/EEC

ANNEX II
Standard requirements for the submission of programmes of monitoring, eradication and control of animal diseases co-financed by the Community

1. Identification of the programme

Member State: LATVIA

Disease(s)¹: RABIES

Year of implementation: 2008-2010

Reference of this document: ERADICATION PROGRAMME OF RABIES CO-FINANCED BY THE COMMUNITY

Contact (name, phone, fax, e-mail): Edvins Olsevsksis, Head of Animal Infectious Disease Surveillance Division, phone +371 7027581, fax +371 7322727, edvins.olsevsksis@pvd.gov.lv

Date sent to the Commission: 30.04.2007.

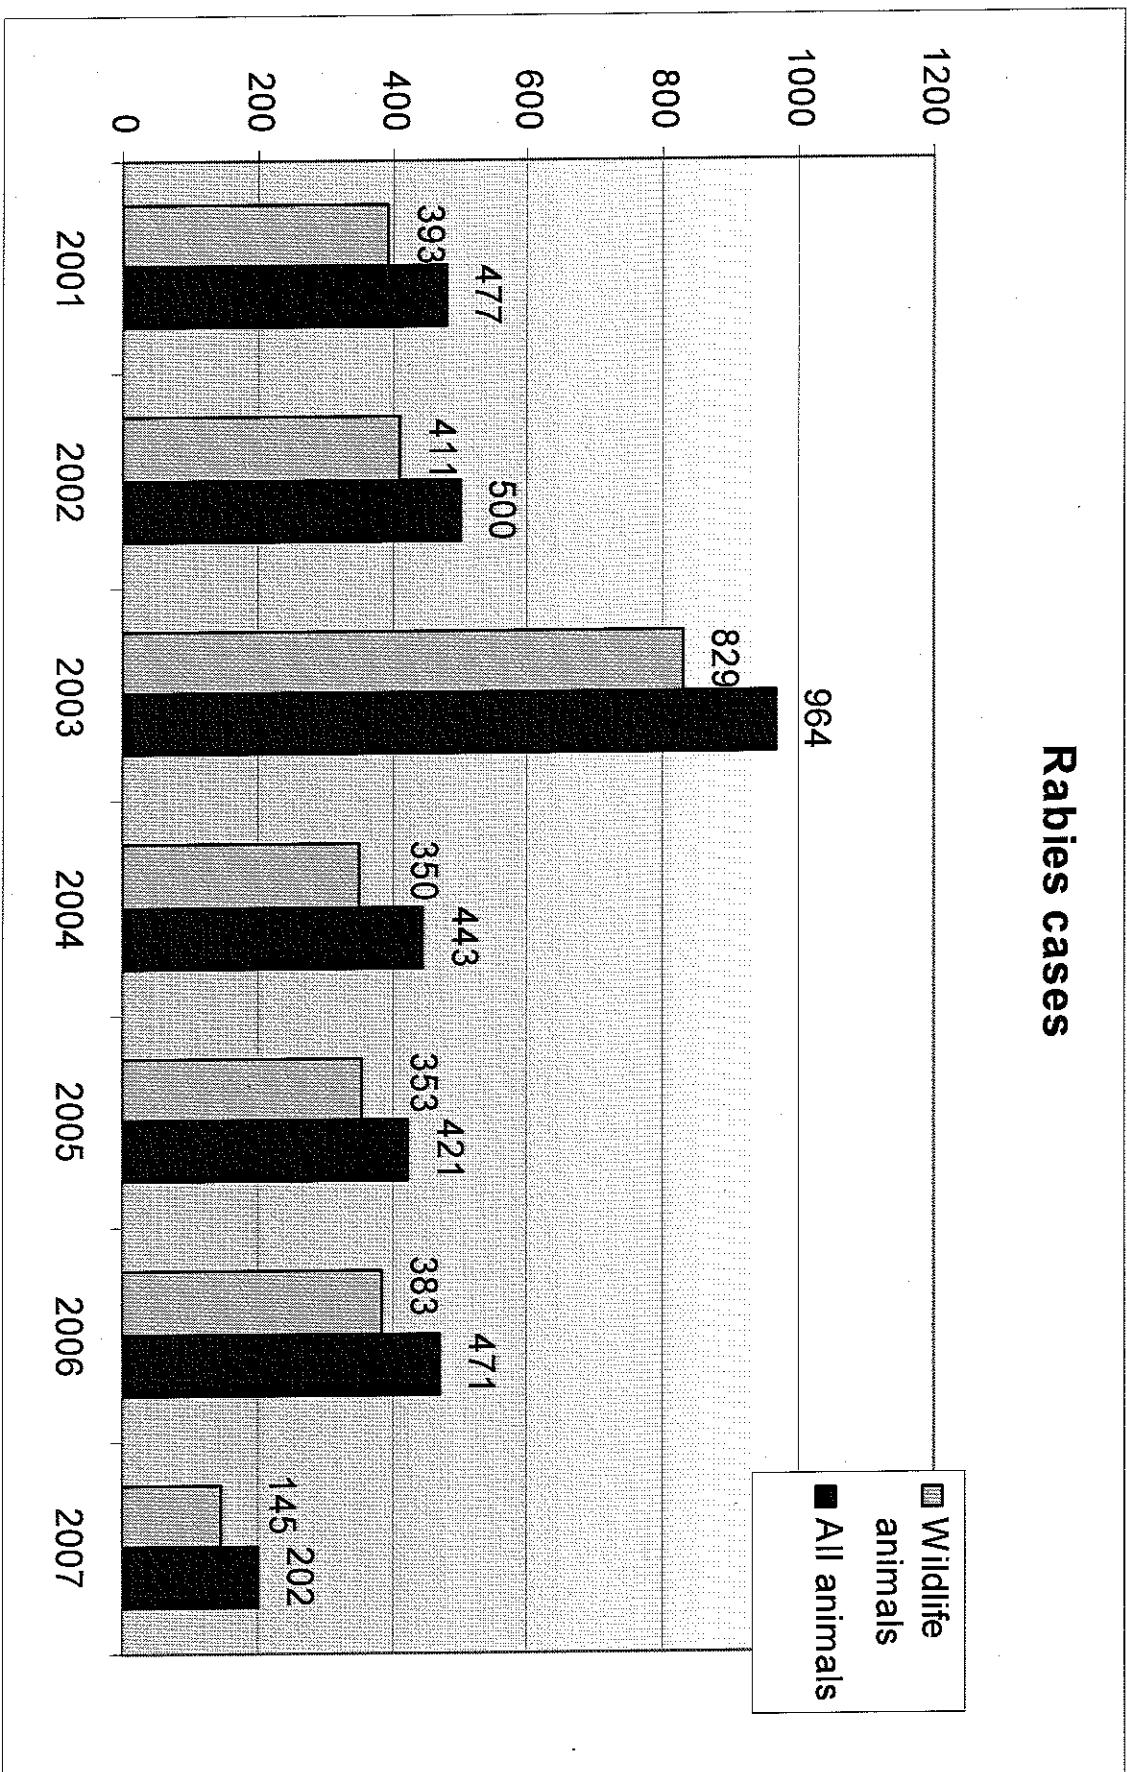

2. Historical data on the epidemiological evolution of the disease(s)²:

Canine rabies was registered in Latvia until 1960, the situation changed in early sixties when most of cases were registered in wild animals - foxes and racoon dogs. The outbreaks of rabies are recorded in all 26 administrative regions. One human case was reported in 2003. To reduce the prevalence of rabies and eliminate the sources of infection in the nature (wild animals) Food and Veterinary Service has started the oral vaccination of foxes since 1991. But because of deficiency of budget resources it was not possible to carry out regular vaccination (each year and in all territory of Latvia) and purchase necessary amount of vaccine. Since 2000 the vaccination was carried out in 17 districts, but since 2001 in all 26 administrative districts, but amount of vaccine baits was insufficient. Vaccination was carried out in autumn and spring by distributing vaccine baits twice with 14 days interval. There was no vaccination in 2004 due to delayed start of PHARE project. In 2005 oral vaccination campaigns were carried out in half of territory – 28 000 km² twice a year, providing 23 baits per 1 km². Staring from 2006 two vaccination campaigns was organized in all territory of Latvia when 23 – 25 baits per km² were distributed.

¹ One document per disease is used unless all measures of the programme on the target population are used for the monitoring, the control and eradication of different diseases.

² A concise description is given with data on the target population (species, number of herds and animals present and under the programme), the main measures (testing, testing and slaughter, testing and killing, qualification of herds and animals, vaccination ...) and the main results (incidence, prevalence, qualification of herds and animals). The information is given according distinct periods if the measures were substantially modified. The information is documented by relevant summary epidemiological tables, graphs or maps.

Rabies cases

3. Description of the submitted programme³:

The submitted programme is prepared with the purpose to distribute vaccine baits in whole territory of Latvia ($64\ 635\ km^2$) twice per year (spring and autumn) to immunize the main reservoirs of rabies in our country – foxes and raccoon dogs. **This is a multi-annual program for period 2008 – 2010.**

Total amount of vaccine baits to be used in each year is **3 200 000** for all the territory, distributing in two campaigns. **Totally 9 600 000 baits will be distributed within three year period (2008 to 2010). Vaccine baits will be distributed by airplanes.**

For the purpose to control efficiency of vaccination programme covers investigation of 8 animals (foxes, raccoon dogs) per $100\ km^2$ for antibody titre (using Biorad ELISA test), bait uptake (Detection of tetracycline in mandible tissue using luminescent microscopy) and rabies incidence control by Fluorescent antibody test (FAT).

³ A concise description of the programme is given with the main objective(s) (monitoring, control, eradication, qualification of herds and/or regions, reducing prevalence and incidence ...), the main measures (testing, testing and slaughter, testing and killing, qualification of herds and animals, vaccination ...), the target animal population and the area(s) of implementation and the definition of a positive case.

4.

Measures of the submitted programme

4.1. Summary of measures under the programme

Duration of the programme:

First year: 2008

Control

Last year: 2010
 Eradication

- Testing
- Slaughter of positive animals
- Killing of positive animals
- Vaccination
- Treatment
- Disposal of products

Monitoring or surveillance

Other measures (specify):

4.2. Designation of the central authority charged with supervising and coordinating the departments responsible for implementing the programme⁴.

The **Food and Veterinary Service (FVS) of the Republic of Latvia** is a state administrative institution headed by the CVO and supervised by the Ministry of Agriculture.

The FVS consists of the central body placed in Riga and territorial structural units (the local level) – 26 regional offices and one city (Riga) office. The central body coordinates activities of the local level and ensure a unified implementation of legislation. The local level carries out the official surveillance in accordance with the state surveillance programmes.

The central authority of Food and Veterinary Service elaborates and coordinates the measures of rabies prophylaxis, control and eradication in the Republic of Latvia, registers and analyses rabies epizootic situation, participates at international animal infectious disease reporting systems. FVS also cooperates with specialists from self-governments, the State Forestry Service, National Environment Health centre and other institutions in order to carry out disease control.

⁴ Describe the authorities charged with supervising and coordinating the departments responsible for implementing the programme and the different operators involved.
Describe the responsibilities of all involved.

State Senior Veterinary inspectors and State Veterinary inspectors are responsible on surveillance of epizootic situation concerning zoonoses in the territory, organize, coordinate and control execution of demands determined in state; coordinate involvement of state authorized veterinarians in system of state surveillance of zoonoses.

State Authorized Veterinarians carry out several tasks of prophylaxis and eradication of zoonoses determined in legislation and in reglament documentation of FVS. They are involved in Rabies passive surveillance.

4.3. Description and delimitation of the geographical and administrative areas in which the programme is to be implemented⁵:

Program will be implemented in all administrative regions. Total area of republic of Latvia: 64635 km².

Latvia lies on the Eastern coast of the Baltic Sea. The combined length of the national borders is 1862 km. The length of land borders with Estonia - 343 km, the Eastern with Russia - 282 km, the Southeast with Byelorussia – 167 km and the Southern with Lithuania - 576 km. The length of sea border is 494 km.

Taking into account above described situation when rabies has been registered in the whole territory of Latvia, the number of main infection carriers - wild animals - foxes and raccoon dogs is impermissible high and there is no geographical barrier that could limit the distribution of infection, with an exception of the Baltic Sea in the West and the Gulf of Riga in the North.

4.4. Measures implemented under the programme⁶

4.4.1. Measures and terms of legislation as regards the registration of holdings:

4.4.2. Measures and terms of legislation as regards the identification of animals⁷:

4.4.3. Measures and terms of legislation as regards the notification of the disease:

- Regulation of Cabinet of Ministers No 298, 22 April 2006 “Procedures for Prevention and Combating of Such Infectious Diseases as to Which Both Animals and Humans are Susceptible” determines how to carry out prophylaxes and eradication of such infectious diseases (zoonoses) as to which both animals and humans are susceptible.

- . - Food and Veterinary Service Instruction Order No 215, 3 September, 2001 “On prophylaxis and eradication of Rabies”

⁵ Describe the name and denomination, the administrative boundaries, and the surface of the administrative and geographical areas in which the programme is to be applied.
Illustrate with maps.

⁶ Where appropriate Community legislation is mentioned. Otherwise the national legislation is mentioned.
⁷ Not applicable for poultry.

4.4.5. Measures and terms of legislation as regards the different qualifications of animals and herds:

4.4.6. Control procedures and in particular rules on the movement of animals liable to be affected or contaminated by a given disease and the regular inspection of the holdings or areas concerned⁸:

4.4.7. Measures and terms of legislation as regards the control (testing, vaccination, ..) of the disease:

- On the basis of Law on Veterinary Medicine, FVS prepare annual animal infectious disease surveillance plan, including Rabies determining monitoring tests and amount of vaccine to be distributed in wildlife area.

All measures are carried out on basis of following documents:

- Regulation of Cabinet of Ministers No 298, 22 April 2006 "Procedures for Prevention and Combating of Such Infectious Diseases as to Which Both Animals and Humans are Susceptible" determines how to carry out prophylaxis and eradication of such infectious diseases (zoonoses) as to which both animals and humans are susceptible.
- Food and Veterinary Service Instruction Order No 215, 3 September, 2001) "On prophylaxis and eradication of Rabies" Both documents regulate Rabies control measures when rabies is suspected or confirmed.
- Regarding oral vaccination of wildlife, there is Animal Infectious Disease State Surveillance Program, approved annually by CVO, where Chapter on oral vaccination is included. Program defines area to be vaccinated, number of vaccine baits and campaigns per year, as well as efficiency evaluation of vaccination campaigns.

⁸

A short description of the control procedures and in particular rules on the movement of animals liable to be affected or contaminated by a given disease and the regular inspection of the holdings or areas is provided.

5. General description of the costs and benefits⁹:

Total costs of the programme per year are **2 412 079.20 Euro**. The general purpose of the programme is to eradicate Rabies in wild population (foxes and raccoon dogs) by oral vaccination in the whole territory of Latvia ($64\ 635\ km^2$) twice a year.

Total amount of vaccine baits to be used in 2009 is **3 200 000** distributed in two campaigns (spring and autumn). The same strategy will be applied in 2010. During 2010 the current program will be re-evaluated and according to Rabies epidemiological situation in Latvia and neighbouring countries new program will be prepared.

⁹ A description is provided of all costs for the authorities and society and the benefits for farmers and society in general.

6. Stratified data on surveillance and laboratory tests

6.1. Stratified data on surveillance and laboratory tests (one table per year and per disease/species)

Description of the used virological tests: Fluorescent antibody test, OIE Manual,2004, chapter 2.2.5.B.1.c),i), p.331;

Mouse inoculation test; OIE Manual,2004, chapter 2.2.5.B.1.c),i), p.331.

 (b) Region as defined in the approved eradication programme of the Member State

6.3.2. Monitoring of wildlife (one table per year and per disease/species)

Year: 2001-2007

Disease^(a): Rabies

Description of the other used tests:

In 2005 tests for detection of antibody level: ¹FAVN and ELISA² (samples considered positive if antibody level => 0,5 IU/ml). In 2006 only ELISA test was used to detect antibody level (seroconversion).

³Detection of tetracycline in mandible tissue using luminescent microscopy (samples collected from animals hunted in vaccinated territory).

⁴Fluorescent antibody tests (samples collected from animals hunted in vaccinated territory).

Results are provided for period November and December, 2006 although samples were collected also in January, February and March, 2007 to evaluate vaccination campaigns of 2006.

Regarding vaccination efficiency control after campaigns in 2007 – samples were collected during period of October, 2007 till March, 2008. Results are included in the table below.

Latvia	Microbiological or virological tests ⁴		Serological tests		Other tests ³	
	Number of samples tested	Number of positive samples	Number of samples tested	Number of positive samples	Number of samples tested	Number of positive samples

6.3.3.

Data on vaccination or treatment of wildlife

Year: 1999-2007

Disease^(a): Rabies

Animal species: foxes and racoon dogs

Description of the used vaccination scheme: Rabies oral vaccine baits were distributed manually near the fox's caverns till 2003. In 2005 and 2006 baits were distributed using airplanes and helicopters. Distance between flight lines was 1 km. Vaccines were distributed during two campaigns (spring and autumn).

Latvia	Square km	Vaccination or treatment programme		
		Number of doses of vaccine or treatment to be administered	Number of campaigns	Total number of doses of vaccine or treatment administered

7. Targets

7.1. Targets related to testing

7.1.1. Targets on diagnostic tests

7.1.1.1. Number and specification of tests

Disease^(a): RABIES

Animal species: Foxes and raccoon dogs

Period 2009

Region^(b)	Type of the test^(c)	Target population^(d)	Type of sample^(e)	Objective^(f)	Number of planned tests
Latvia	Biorad Enzyme-linked immunosorbent assay (ELISA)	Foxes and raccoon dogs	Serum	Efficiency of vaccination campaign	5 120
	Fluorescent antibody test (FAT)	Foxes and raccoon dogs	Brain tissue	Efficiency of vaccination campaign	5 120
	Detection of tetracycline in mandible tissue using luminescent microscopy	Foxes and raccoon dogs	Mandible	Efficiency of vaccination campaign	5 120
				Total	15 360

Period 2010

Region^(b)	Type of the test^(c)	Target population^(d)	Type of sample^(e)	Objective^(f)	Number of planned tests
Latvia	Biorad Enzyme-linked immunosorbent assay (ELISA)	Foxes and raccoon dogs	Serum	Efficiency of vaccination campaign	5 120
	Fluorescent antibody test (FAT)	Foxes and raccoon dogs	Brain tissue	Efficiency of vaccination campaign	5 120
	Detection of tetracycline in mandible tissue using luminescent microscopy	Foxes and raccoon dogs	Mandible	Efficiency of vaccination campaign	5 120
				Total	15 360

- (a) Disease and species if necessary
- (b) Region as defined in the approved eradication programme of the Member State
- (c) Description of the test (e.g. SN-test, AB-Elisa, RBT, ...)
- (d) Specification of the targeted species and the categories of targeted animals (e.g. sex, age, breeding animal, slaughter animal, ...).
- (e) Description of the sample (e.g. blood, serum, milk, ...)
- (f) Description of the objective (e.g. qualification, surveillance, confirmation of suspected cases, monitoring of campaigns, seroconversion, control on deleted vaccines, testing of vaccine, control of vaccination, ...)

7.1.1.2. Testing scheme(s)¹¹:

According to Order, issued by Chief Veterinary Officer, determining number of samples and area where to collect animals for investigation.

Efficiency of vaccination campaigns is evaluated in all regions where vaccines are distributed and 8 animals per 100 km² should be submitted to laboratory for testing. Samples are collected in collaboration with hunters and FVS territorial units are responsible for receiving and sending of samples to the laboratory.

¹¹ Describe the testing scheme according the different categories if appropriate (which herds and animals, the number of animals per herd, the frequency and the interval of sampling) with reference to the national and Community legislation where appropriate.

Disease^(a):Rabies

7.2. Targets on vaccination or treatment¹² of wildlife

Animal species: Foxes and racoon dogs

It is planned to distribute vaccine baits evenly in all country for the next two years (2009 – 2010), because Rabies is still endemic in all regions in Latvia. During 2010 we will evaluate situation and if necessary elaborate new vaccination strategy (separate regions, different distance between flight lines, bait density etc.) taking into account Rabies situation within three next years.

Period 2009

		Targets on the vaccination or treatment programme		
Region ^(b)	Square km	Number of doses of vaccine or treatments expected to be administered in the campaign	Expected number of campaigns	Total number of doses of vaccine or treatment expected to be administered
Latvia	64635 km ²	1 600 000	2	3 200 000
Total	64635 km²	1 600 000	2	3 200 000

Period 2010

		Targets on the vaccination or treatment programme		
Region ^(b)	Square km	Number of doses of vaccine or treatments expected to be administered in the campaign	Expected number of campaigns	Total number of doses of vaccine or treatment expected to be administered
Latvia	64635 km ²	1 600 000	2	3 200 000
Total	64635 km²	1 600 000	2	3 200 000

¹² Data to provide for Bovine brucellosis, Ovine and caprine brucellosis (*B. melitensis*), Aujeszky's disease, , African Swine fever, swine vesicular disease, endemic classical swine fever, Rabies, Echinococcosis and trichinellosis and agents thereof.

- (a) Disease and species if necessary
- (b) Region as defined in the approved eradication programme of the Member State

8. Detailed analysis of the cost of the programme¹³ **Period 2009**

Costs related to	Specification	Number of units	Unitary cost in €	Total amount in €	Community funding requested (yes/no)
1. Testing					
1.1. Cost of the analysis					
Test: BIORAD ELISA		5 120	16,83	86 169,6	Yes
Test: FATT		5 120	10,74	54 988,8	Yes
Test: Detection of tetracycline in mandible		5 120	7,62	39 014,4	Yes
1.2. Cost of sampling					
Hunting and delivery costs (foxes and raccoon dogs)		5 120	15,00	76 800,0	Yes
Storage of vaccine		12 months	712,2	8 546,4	Yes
2. Vaccination or treatment					
2.1. Purchase of vaccine/treatment					
Vaccine baits		3 200 000	0,50	1 600 000	Yes
Vaccine aerial distribution		128 000 km ²	4,27	546 560	Yes
2.2. Distribution costs					
2.3. Administering costs					
2.4. Control costs					

¹³ Fixed costs should not be included. All amounts are VAT excluded.

3. Slaughter and destruction			
3.1. Compensation of animals			
3.2. Transport costs			
3.3. Destruction costs			
3.4. Loss in case of slaughtering			
3.5 Costs from treatment of products (milk, eggs, hatching eggs, etc)			
4. Cleaning and disinfection			
5. Salaries (staff contracted for the programme only)			
6. Consumables and specific equipment			
7. Other costs			
		TOTAL	2 412 079.20

Period 2010
