Reduction of marteilia free area in DK

16-12-01

Historic background

- Bonamia and Marteilia free status 2005 in the Limfjord
- Marteilia free status 2014 in the central Kattegat and Belt Sea
- Bonamia ostreae detected in samples collected november 2014 – free status withdrawn

Problems with maintaining freedom for marteilia

- Industry have to pay for surveillance programme – no benefit
- Impact of marteilia in mussels debatable
- No probability for clarification in near future
- After detection of bonamia - no benefit for maintaining marteilia free status for oyster producers
- Marteilia freedom only for protection of oyster stocks

Surveillance

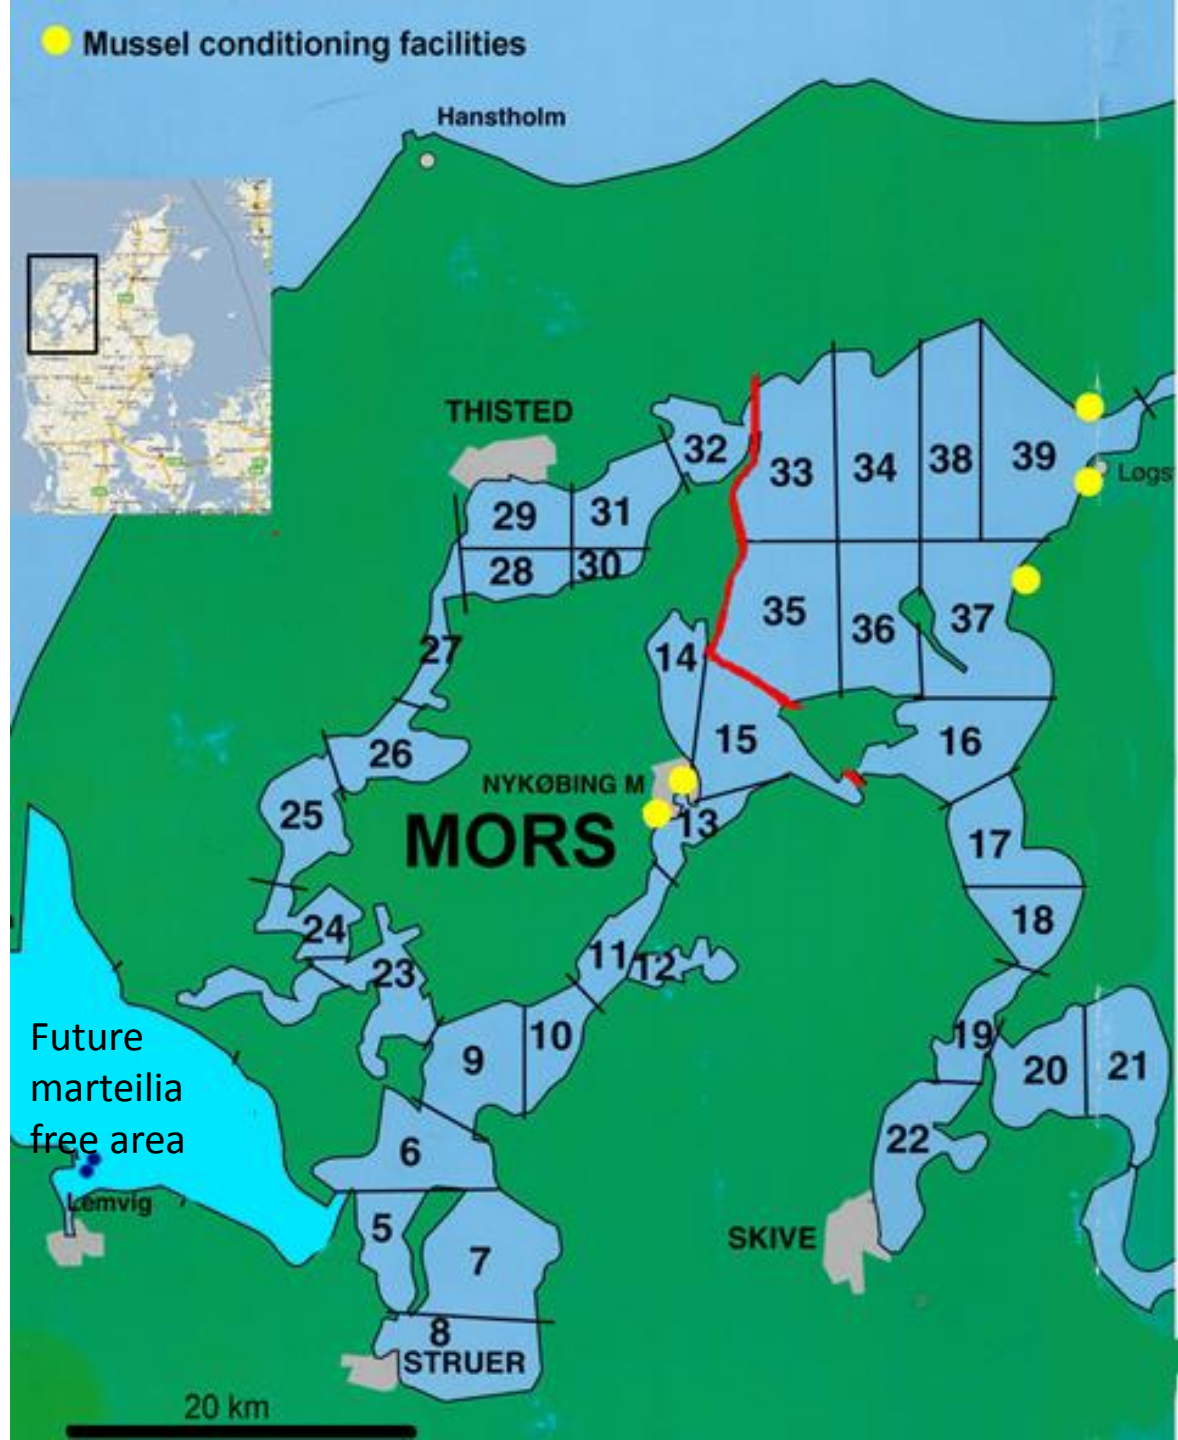

Marteilia

150 oysters/4 years \approx

40 oysters/year

Bonamia

150 oysters/year – first year
