

Eradication: Final report for Salmonella 2018

For each approved annual or multi-annual programme Member States shall submit to the Commission by the 30 April each year an annual detailed technical and financial report covering the previous year. That report shall include the results achieved and a detailed account of eligible costs incurred (Art 14 of Regulation (EU) No 652/2014).

This form is for information only, no submission possible.

Reporting period

From: 2018

To: 2020

Year of implementation: 2018

1. Technical implementation of the programme

1.1 Description and evaluation of the evolution of the epidemiological situation, the technical implementation of the activities foreseen under the programme and the cost-effectiveness of the programme.

In Lithuania no flocks of adult laying hens have been detected positive for salmonella during 2018. No outbreaks of egg born salmonellosis have been reported, however, 794 outbreaks of salmonellosis have been detected in humans in 2018 when the source of the infection have been detected only in one case.

1.2 Details on the level of achievement of the targets set in the approved programme and technical difficulties.

The targets of approved programme have been achieved only partly. All holdings under programme with adult laying hens have been inspected and official samples have been taken with negative results. However, the vaccination of flocks against salmonella have not been carried out. The public procurement procedure have been stopped in the final stage due to formal complains of one participant of the public procurement procedure. Some of the holdings have carried out the vaccination on their own expenses. The procedure have been renewed in 2019.

1.3 Epidemiological maps for infection and other relevant data on the disease/activities (information on serotypes involved,...) (Please attach files of data using the PDF attachment feature) Use the textbox below to provide clarifications for the maps you attach, if needed.

There have been no cases of salmonellosis in laying hens in 2018.
