

SGPV situation in Spain

PAFF 13th July 2023

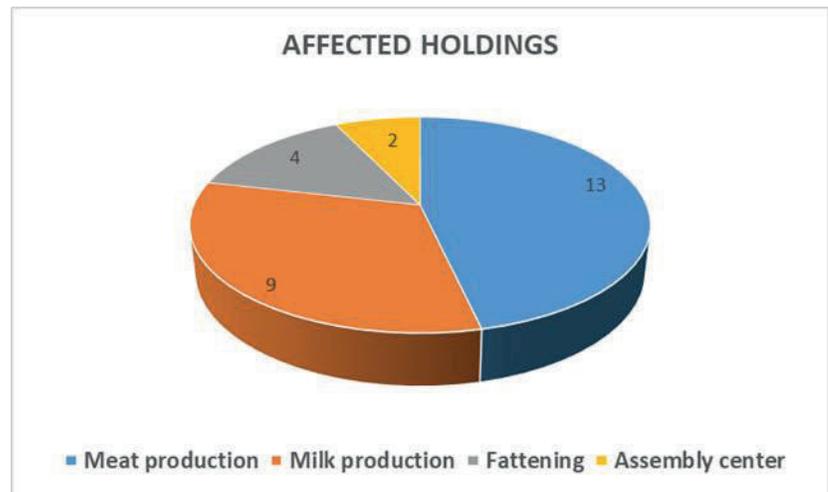

-
- SG Animal Health, Hygiene and Traceability
 - MAPA, Spain

Situation of SGPV in Spain (up to 13.07.2023)

PROVINCE	OUTBREAKS	AFFECTED CENSUS
Granada	12	2,978 sheep + 158 goats
Almería	1	97 sheep + 9 goats
Cuenca	13	34,835 sheep + 338 goats
Ciudad Real	4	13,868 sheep + 260 goats

Total affected census: 51,778 sheep & 767 goats.

Restricted Zone

- **Protection Zone:** municipalities in 10 km (48d, until 20th July).
- **Surveillance Zone:** of municipalities in 30 km (66d, until 7th August)
- **Further Restricted Zone** until 25th September

Situation of SGPV in Spain (up to 13.07.2023)

- Enhanced epidemiological surveillance in all Castilla – La Mancha: First round of visits in all sheep holdings in PZ and SZ for clinical inspection has been implemented, and the second round is being carried out.
 - **No detection of further outbreaks** since the last notified (2023/7; 17th May 2023)
 - Detection of a **total of 15 suspicious cases** (including 3 suspicions in other AACCC), with detection of clinical signs and lesions compatible with SGPV → All tested negative in the NRL (contagious ecthyma, ectoparasites).
- **Implementation of all control measures provided** in Delegated Regulation (EU) 2023/2333 (and modifying delegated regulations)
- **Recommendations made by EU-VET team** have been/are being implemented.

EPIDEMIOLOGICAL SITUATION IS STABLE

Movements of live animals from FRZ

Request for flexibilization of movement conditions of live animals from FRZ to national free zone similar to previous conditions:

- Authorization of movements of live animals **to other holdings of destination apart from slaughter**.
- Mandatory residence of 30 days in the holding of origin (or since their birth if are younger than 30 days) before movement.
- **Clinical inspection** of all animals to be moved at least 48h prior movement, without detection of compatible signs / lesions; or any other zoosanitary guarantee based on a favorable risk analysis.
- Maintenance of a **30-day period of residence** of live animals in holding of destination before new movements (except to slaughter), with enhancement of passive surveillance and no detection of compatible signs or lesions.

Conclusions

- Epidemiological situation of the disease seems to be stable and under control, with no detection of further outbreaks since 17/05/23.
- All control measures have been implemented, as well as the recommendations by EU-VET team (or in process).
- If the situation remains stable, PZ would be lifted on 20/07/23; SZ on 07/08/23.
- According to this favourable situation, request for flexibilization of movements of live animals from FRZ to national free zone, with still strict measures in order to guarantee adequate sanitary conditions.

**THANK YOU VERY MUCH
