

19 November 2020

# 2019 Annual Surveillance report/New epidemic season of HPAI and Early Warning tool

**Inma Aznar**

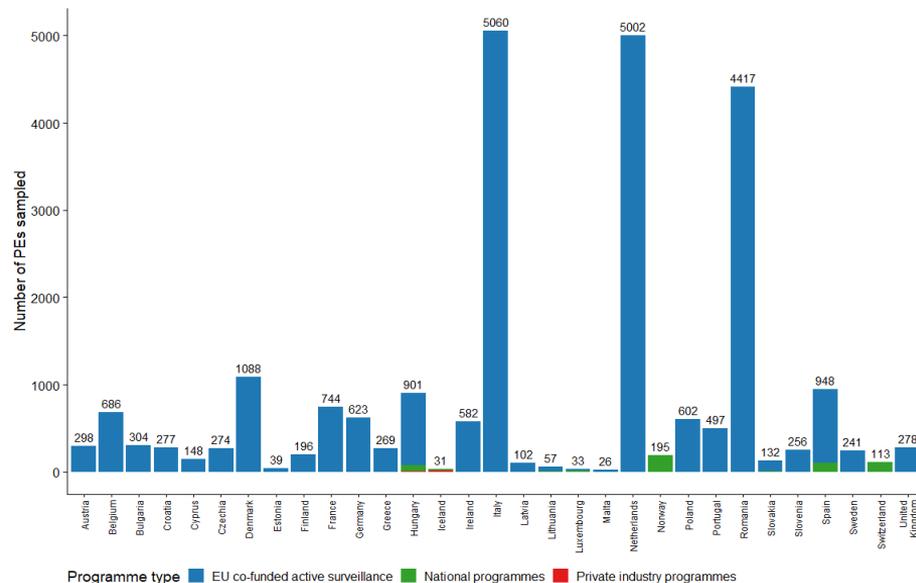

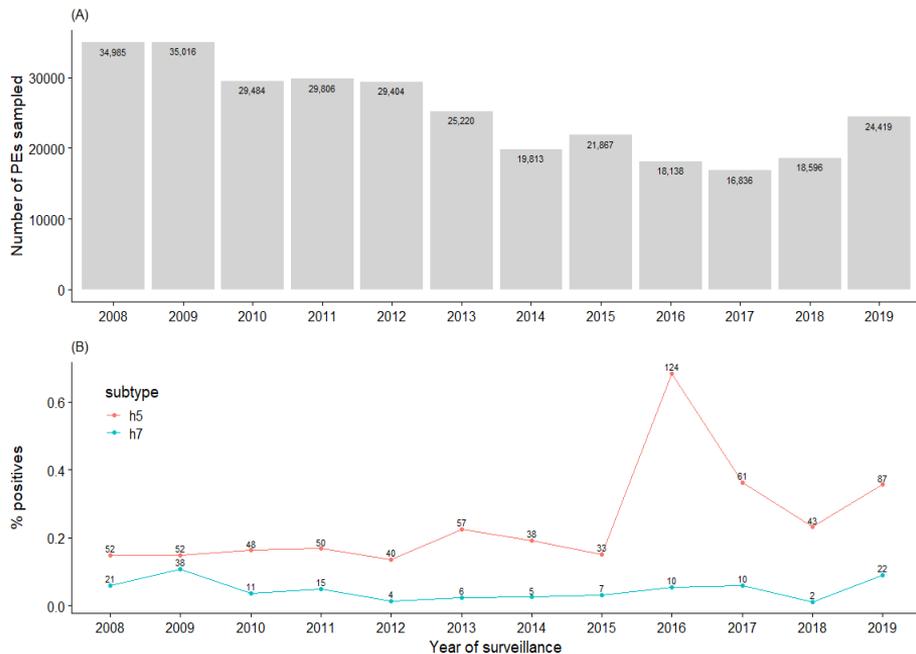

**Francisca Baldinelli**

Scientific officers, EFSA

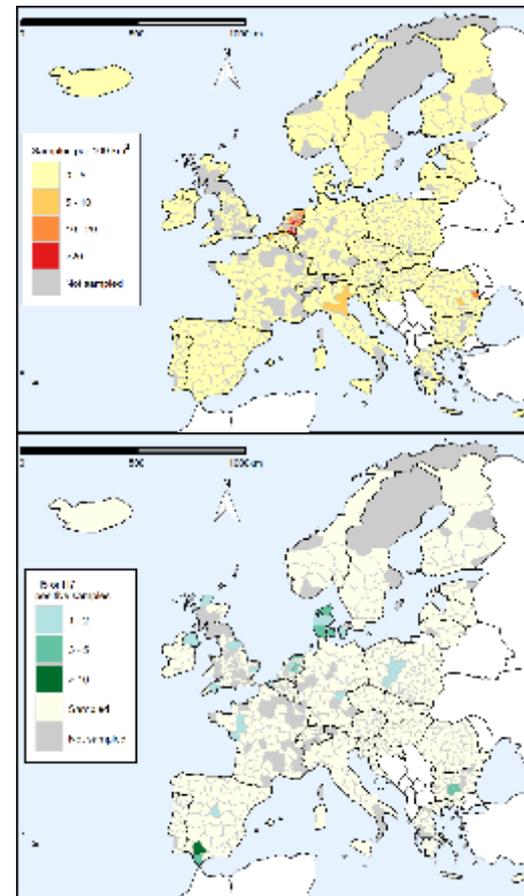

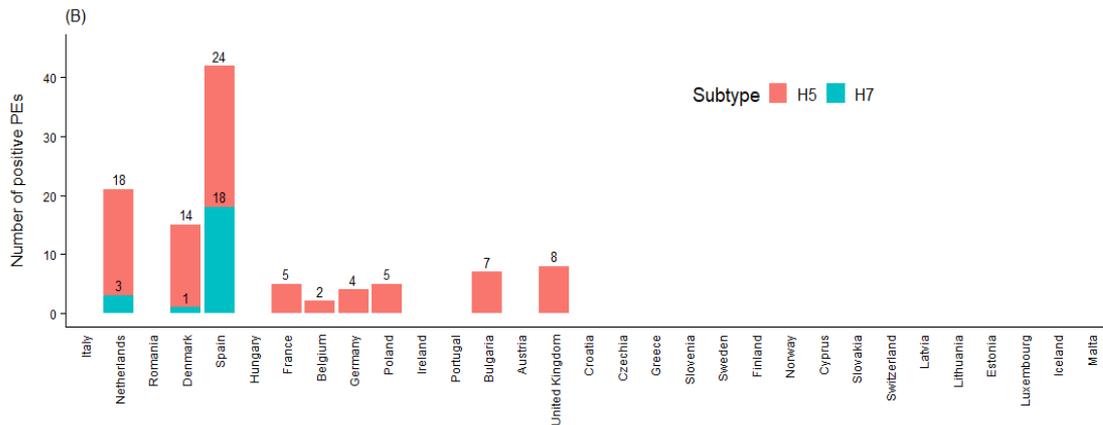

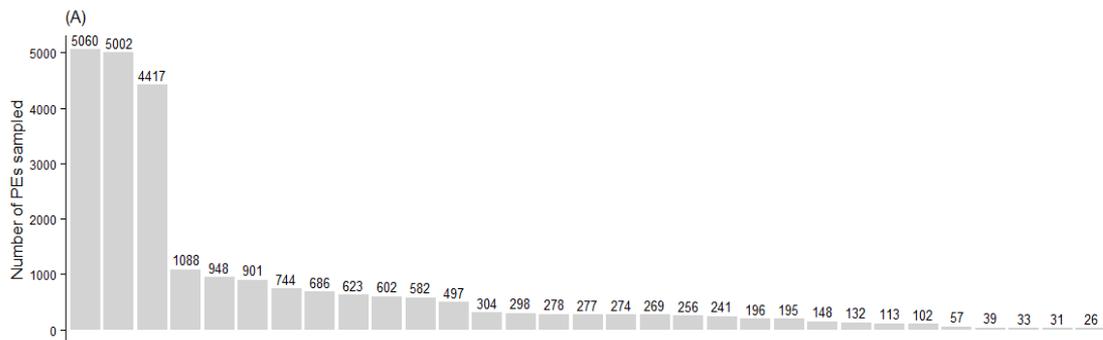

Trusted science for safe food

# POULTRY SEROLOGY

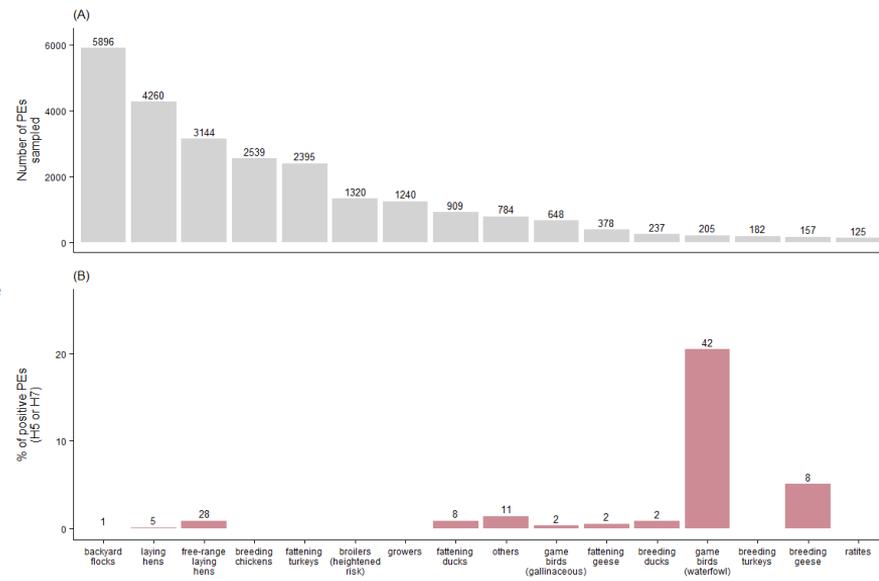

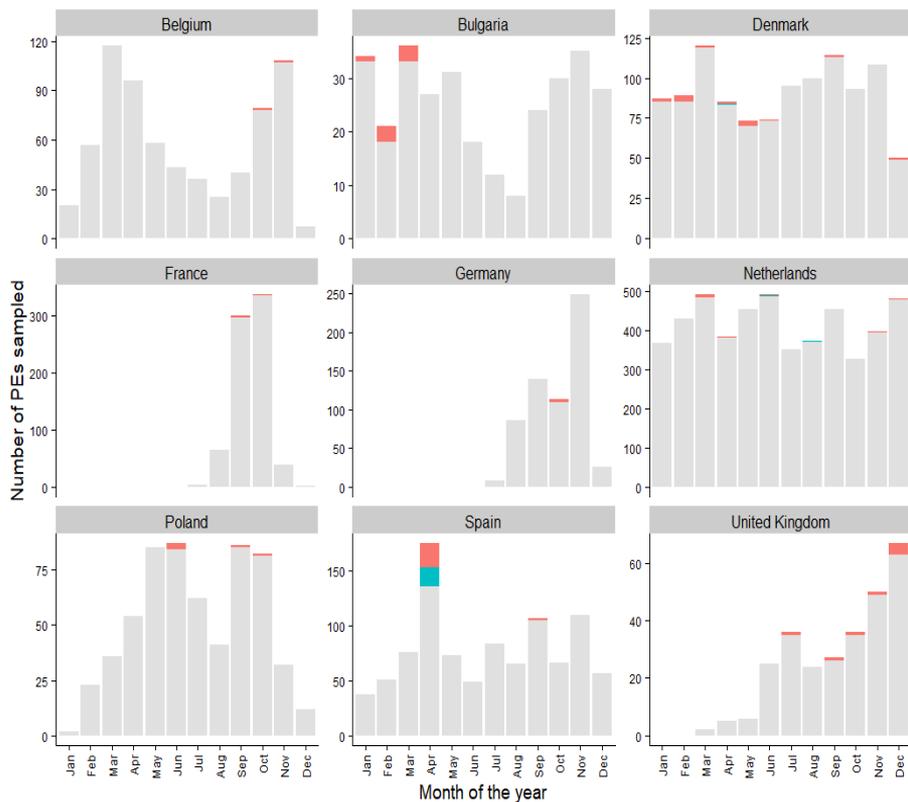

- 31 RC
- 24,419 PE: H5/H7 (0.45% vs 0.24%)
- H5: 0.36% vs 0.23
- H7: 0.09% vs 0.01%

# Serological positive: by country

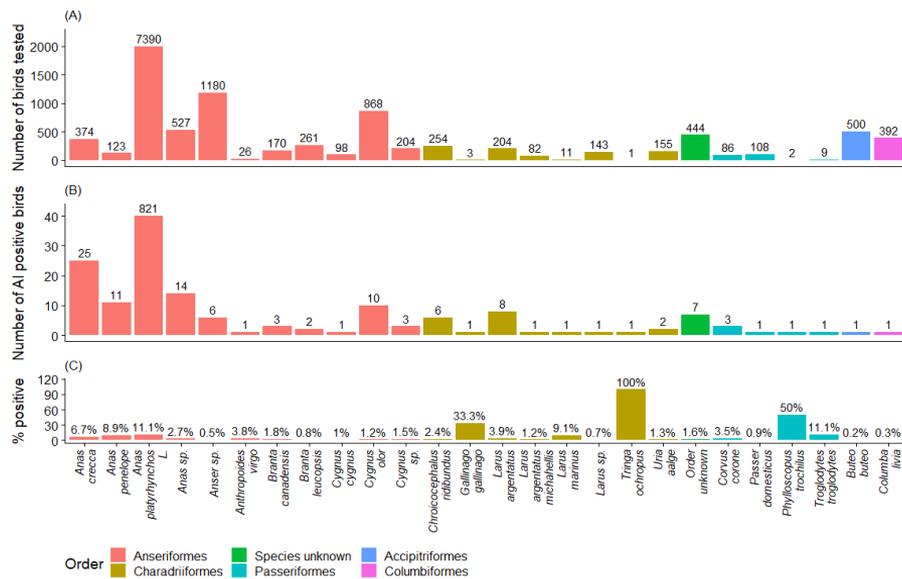

# Serological positive: by month and categories

- 109 PEs with positive serological tests for H5 or H7, samples from 80 PEs were tested for AI viral RNA using polymerase chain reaction (PCR)
- France/Netherlands (non H5/H7) (one each)
- Denmark: H5N1 LPAI (free-range laying hens) and one for H7N7 LPAI (game-purpose mallards). These PEs were also positive in virus isolation

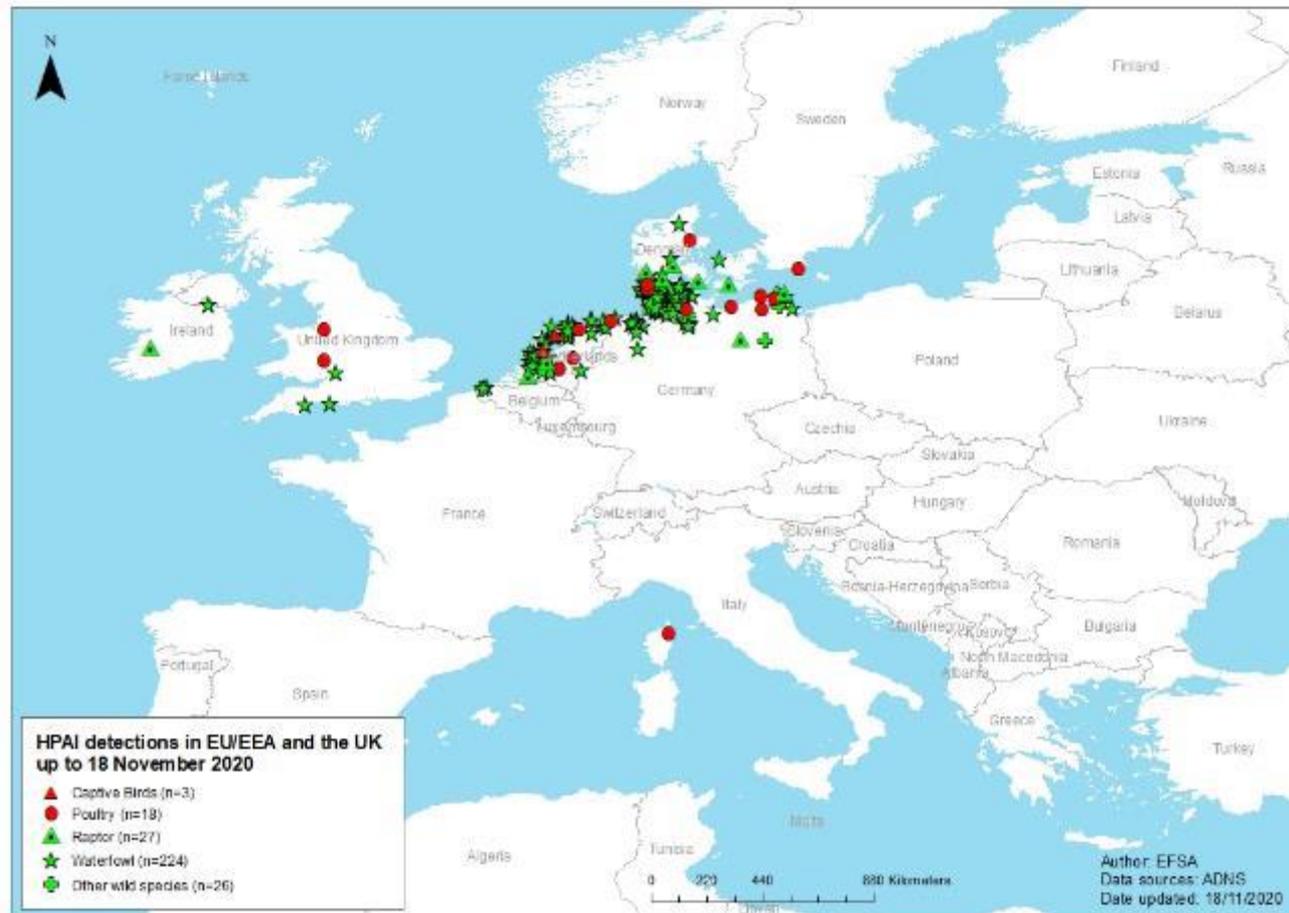

# Wild birds

# Rapid Risk Assessment and Tool

Geographical distribution of HPAI outbreaks up to 18 November 2020 (n=298)

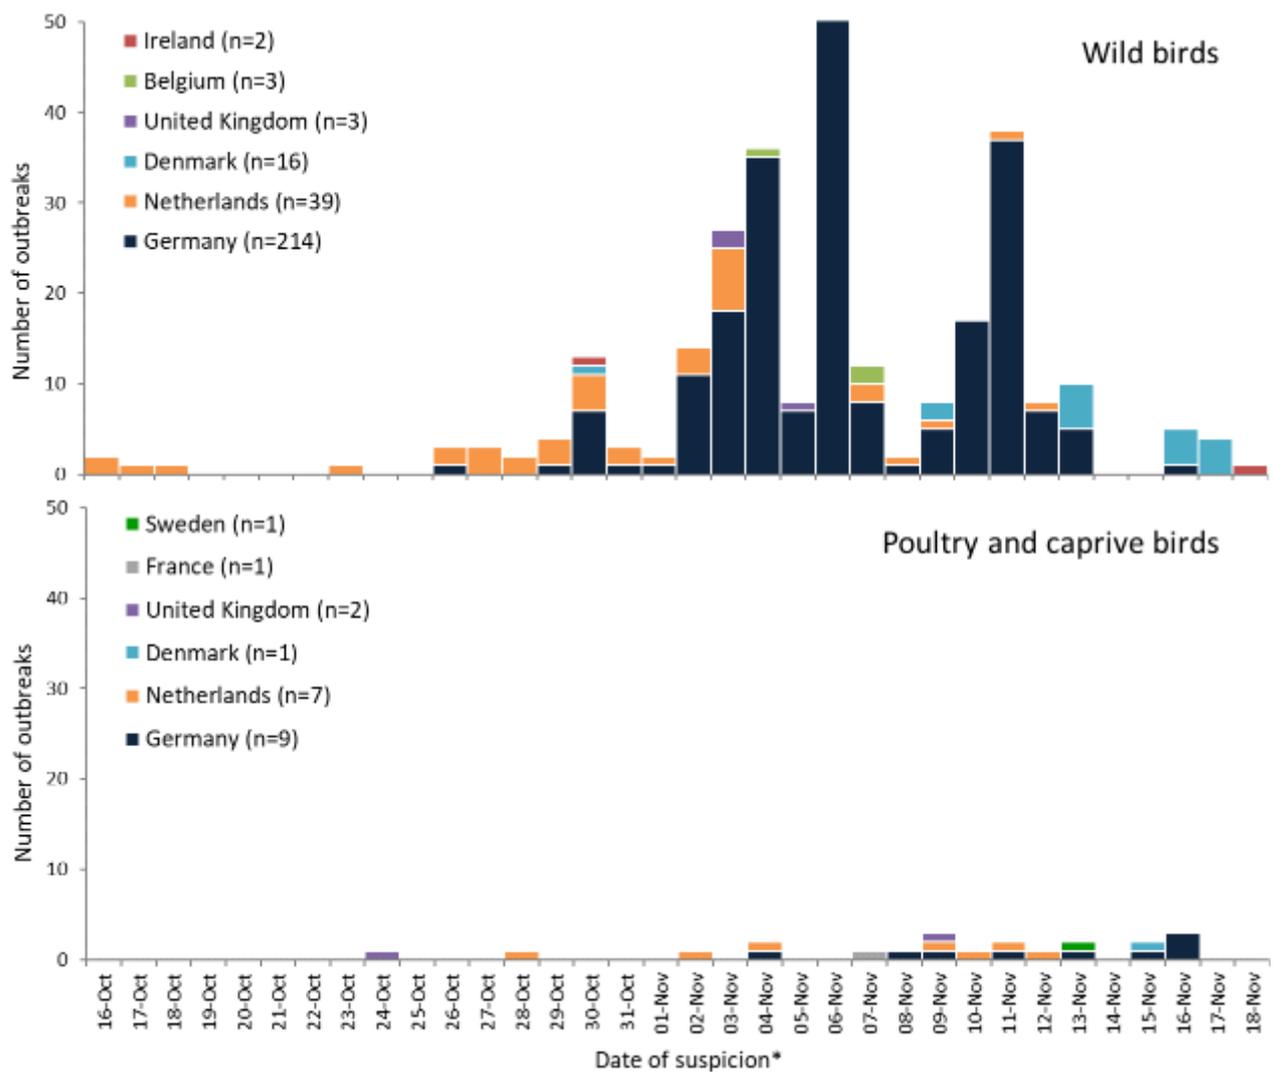

# Genetic characterisation of HPAI viruses

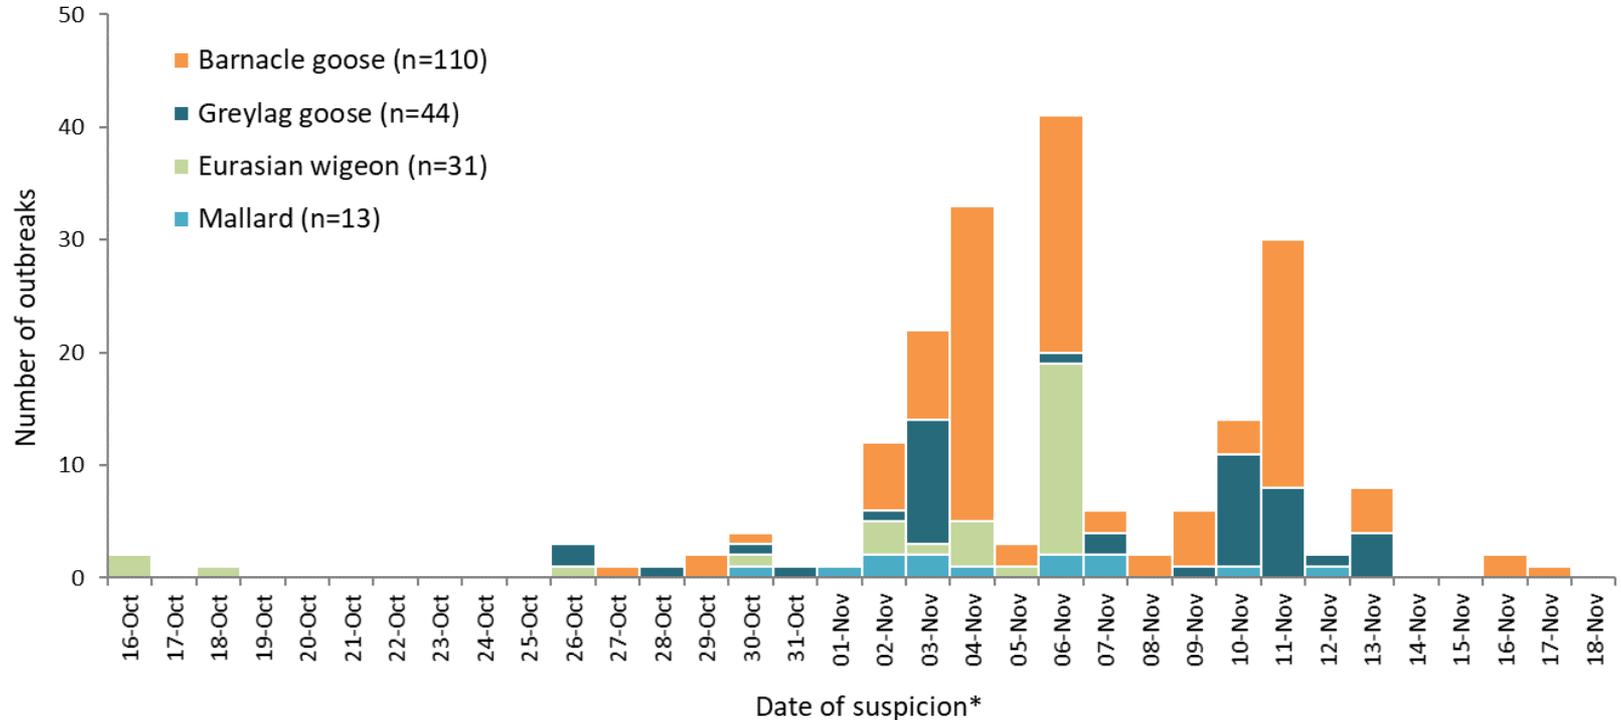

HPAI A(H5) genotypes identified in Eurasia since May 2020 and their geographic detection based on the available sequences

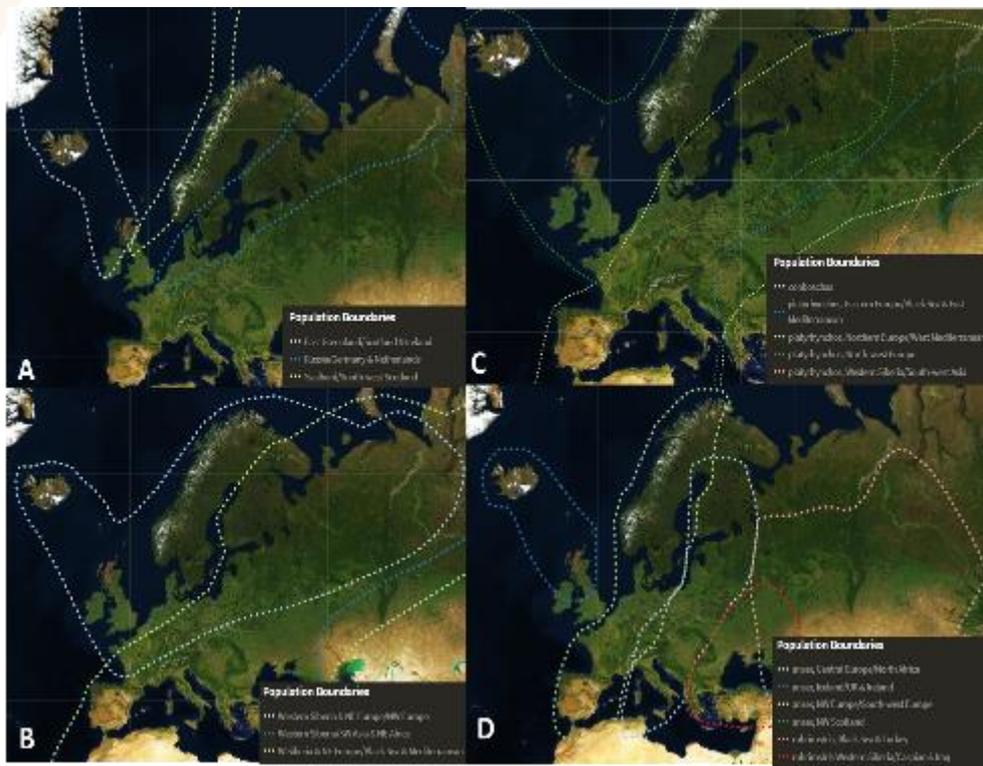

# HPAI in Europe

Distribution of number of HPAI detections in Europe by date of suspicion for wild birds (n=277), and poultry and captive birds (n=21)

Number of detections in the four most affected wild birds species, by date of suspicion, 17 November 2020 (n=198)

- **Greylag goose** moving south from Scandinavia (or relatively local birds)
- **Barnacle goose:** Arctic Russian and Baltic (migratory) and NL/BE/DE/DK (sedentary) breeding populations
- **Eurasian wigeon:** returning from breeding and passage areas in Russia and Eastern Europe
- **Mallard:** mixture easterly migrants and sedentary populations

Data source: Critical Site Network Tool 2.0 (A) flyways for barnacle goose; B) flyways for wigeon; C) flyways for greylag goose; D) flyways for mallard)

# Migration Mapping tool: update by EFSA

Migration Mapping Tool home page

Last Update

## Migration Mapping Tool

This tool provides a summary of the movements of 21 species of wild bird to and from the area you select using radio rings of ringed birds.

### To use the tool:

First select an area of interest (e.g. Spain and Portugal) from the drop down menu to the right - then you can either -

**A. Choose 'Search by location'** if you want to look at all movements between a particular location and your area of interest and you:  
- know the co-ordinates of the location;  
- can find the location by using the Google Map provided.  
You will be provided with a list of species that pass through your chosen location, to or from your area of interest, after specifying the month of interest. You can then choose a species to see the migration maps.

**B. Choose 'Browse species'** if you wish to see migration routes to and from your area of interest for a particular species.

**C. Choose 'View sites'** if you wish to see details of sites in particular countries.

Ukraine	.	.	.	.	.	.	.	2	.	.	.	.

- The **risk of zoonotic transmission** of AI viruses to the general public in Europe remains **very low**
- The HPAI viruses currently show a high genetic variability:
  - **reassortment** events with LPAI virus **before arriving in Europe**
  - **more than one introduction from Asia**
- **High risk of further introduction** of HPAI (H5) viruses in European countries

- **HPAI (H5)** viruses will continue to spread due to shorter-distance movements of infected birds. Multiple species may be involved
  
- The **risk of virus spread from wild birds to poultry is high**

## REPORTS

- Rapid risk assessment released on **Friday morning**
- Surveillance Annual report published end of November
- Quarterly EFSA report early released (early December)
- **Other activities**
- EuroBird Portal (EBP)+ EURING tool released in July next year (old tool and EBP portal data available)
- Several projects: EARLY WARNING (including closing gaps of knowledge at source)
