and Agriculture

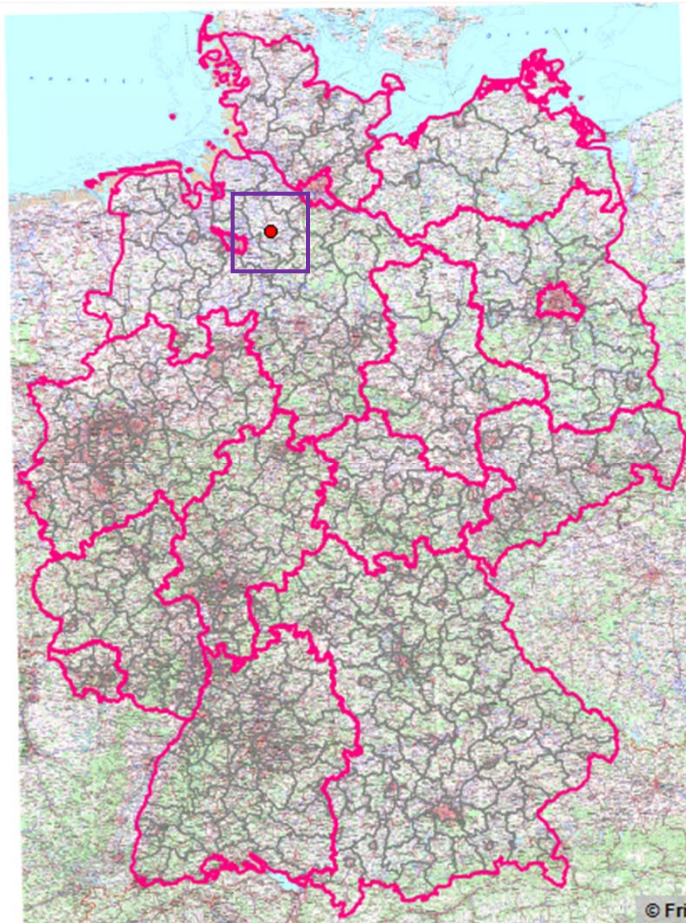

# **Low pathogenic Avian Influenza subtype H5N2 in poultry in Germany**

Standing Committee for Plants, Animals, Food and Feed

30 November / 1 December 2017

## LPAI H5N2 in Germany (Rotenburg-Wümme, Lower Saxony)

© Friedrich-Loeffler-Institut

### Affected Holding:

978 poultry (317 geese, 661 ducks for seasonal slaughter)

### Suspicion:

20.11.2017 (AI-monitoring);  
poultry without clinical signs

### Confirmation:

22.11.2017 (Land Lab + FLI)

Epidemiology: no movement of  
poultry/products outside the affected holding

Restricted zone: no other poultry

Risk analysis of the competent authority:  
no risk of spreading AI-virus → slaughtering  
of all poultry (finished 28.11.2017)
