

Dead wild boars washed ashore on the island of Ærø

SCOPAFF meeting

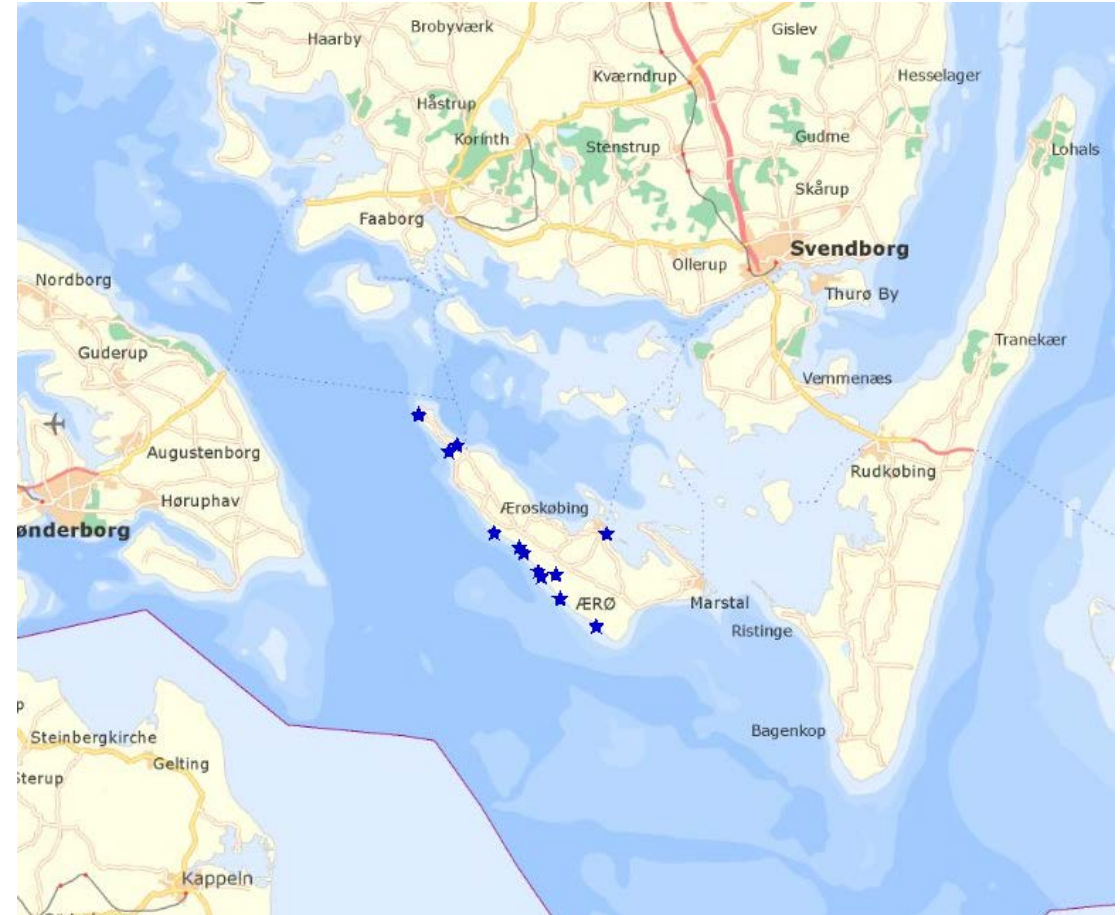

Stig Mellergaard

Sequence of event – The island of Ærø, DK

- 20 October 2019: 2 dead wild boar washed ashore
- 22 October 2019: 3 dead wild boar washed ashore
- 23 October 2019: 1 dead wild boar washed ashore
- 24 October 2019: 1 dead wild boar washed ashore
- 25 October 2019: 1 dead wild boar washed ashore
- 28 October 2019: 1 dead wild boar washed ashore
- 29 October 2019: 1 dead wild boar washed ashore
- 3 November 2019: 1 dead wild boar washed ashore
- 11 November 2019: 1 dead wild boar washed ashore

Handling of carcasses

- All dead carcasses removed in "body bags" and brought to a rendering plant
- No tests for ASF as it is wild boars of unknown origin

ASF control of Danish wild boar population

- Danish wild boar population limited to 30-40 animals located in an area close to the Danish-German border
- Therefore, unlikely that the carcasses originate from Denmark
- All Danish wild boars both found dead and shot (fenced or not fenced) are tested for ASF
- All carcasses of wild boar of unknown origin removed and disposed of without testing.

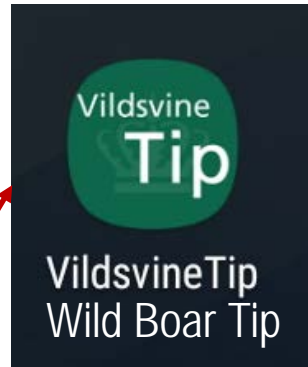

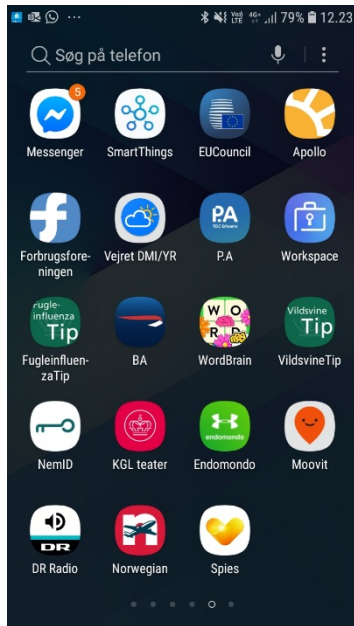

Explanation of event

- Most likely a flock of wild boar
- The flock may have visited a small island along German or Polish coast and have been caught by the current and drowned
- Or fled to the sea during hunting activities
- The event has taken place at the same spot and at the same time as the carcasses has been moved to the same Danish locality within a limited time window

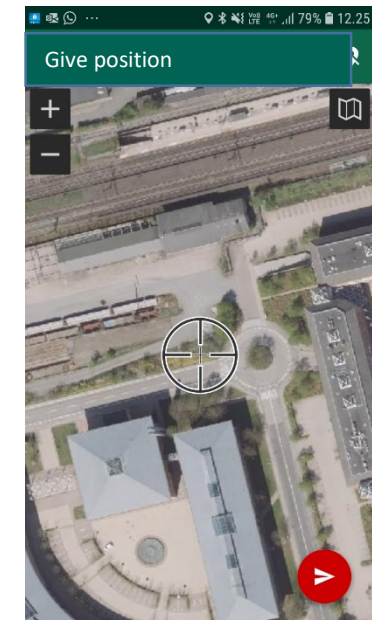

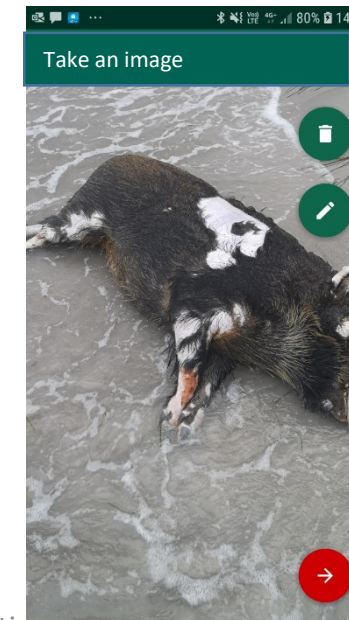

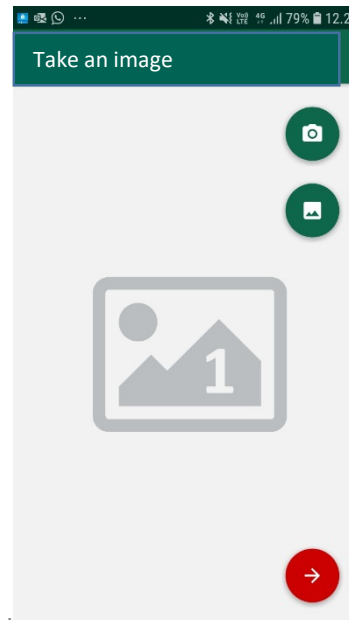

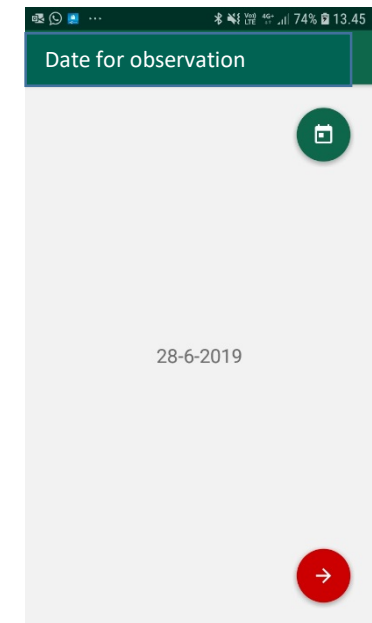

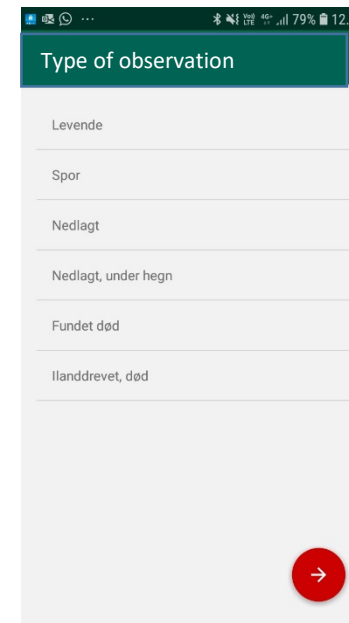

Sea currents in the Baltic Sea

Wild boar app

Public reporting of observations of live and dead wild boars

Public access to wild boar observations and test results for ASF, CSF, Aujeszky's disease and trichinella at DVFA homepage

The screenshot shows the homepage of the Danish Veterinary and Food Administration (DVFA) website, 'Vildsvin'. The page is titled 'Du er ikke logget ind' (You are not logged in). The main content area is divided into two sections: 'Prøveresultater for vildsvin' (Test results for wild boar) and a map of Denmark.

Prøveresultater for vildsvin

Vælg år

På denne side vises resultatet af de prøver, som Veterinærinstituttet har udført eller er ved at udføre, samt fund af levende vildsvin og spor efter vildsvin, som ikke kan undersøges i laboratoriet.

Der er til dato set eller undersøgt 170 vildsvin, som er fundet i 2019. Tabellen er senest opdateret den 24. oktober 2019.

Opsummeringen viser som standard det seneste år, der findes analyserede prøver fra - men du kan vælge et eller flere tidligere år i listen herunder.

Levende Døde Både levende og døde

Map of Denmark

The map shows the location of various wild boar observations in Denmark. The legend indicates the status and type of findings:

- Status**
 - Afrikansk svinepest (Red square)
 - Klassisk svinepest (Pink square)
 - Aujeszky's sygdom (Orange square)
 - Trikiner (Yellow square)
 - Ikke smittet (Green square)
 - Endnu ikke undersøgt (Grey square)
 - Undersøges ikke (Blue square)
 - Flere sygdomme (Cross symbol)
- Fundtyper**
 - Levende (Black circle)
 - Spor (Black footprint)
 - Nedlagt (Black square)
 - Nedlagt under hegn (Black diamond)
 - Fundet død (Black triangle)
 - Fundet død under hegn (Black inverted triangle)
 - Ilanddrevet død (Black star)
