

Standard requirements for the submission of programme for eradication, control and monitoring PROGRAMME for ERADICATION : ANNEX I

Member States seeking a financial contribution from the Union for national programmes for the eradication, control and monitoring of animal diseases and zoonosis listed below, shall submit applications containing at least the information set out in this form.

Bovine brucellosis, bovine tuberculosis, ovine and caprine brucellosis (*B. melitensis*), bluetongue in endemic or high risk areas, african swine fever, swine vesicular disease, classical swine fever, rabies.

The central data base keeps all submissions. However only the information in the last submission is shown when viewing and used when processing the data.

If encountering difficulties, please contact SANCO-BO@ec.europa.eu, describe the issue and mention the version of this document: 2014 1.09

Instructions to complete the form: Your current version of Acrobat is: 10.104

- 1) Be informed that you need to have at least the Adobe Reader version 8.1.3 or higher to fill and submit this form.
- 2) To verify your data entry while filling your form, you can use the "verify form" button at the top of each page.
- 3) When you have finished filling the form, verify that your internet connection is active and then click on the submit notification button below. If the form is properly filled, the notification will be submitted to the server and a Submission number will appear in the corresponding field.
- 4) **IMPORTANT:** Once you have received the Submission number, save the form on your computer.
- 5) If the form is not properly filled, an alert box will appear indicating the number of incorrect fields. Please check your form again and try to re-submit it according to steps 3), 4) and 5). Should you still have any difficulties, please contact SANCO-BO@ec.europa.eu.
- 6) For simplification purposes you are invited to submit multi annual programmes
- 7) As mentioned during the Plenary Task Force of 28/2/2014, you are invited to submit your programmes in English.

IMPORTANT: AFTER SUBMITTING THE FORM DO NOT FORGET TO SAVE IT ON YOUR COMPUTER FOR YOUR RECORDS!

Submission date

Friday, September 05, 2014 14:30:59

Submission number

1409916665116-3691

Standard requirements for the submission of programme for eradication, control and monitoring

1. Identification of the programme

Member state: LATVIJA

Disease: Bluetongue in endemic or high risk areas

Species: Bovines and sheep and goats

This program is multi annual: no

Request of Union co-financing
from beginning of:

2015

Standard requirements for the submission of programme for eradication, control and monitoring

1.1 Contact

Name : Edvins Olsevskis

Phone : +371 67095240

Fax. : +371 67322727

Email : edvins.olsevskis@pvd.gov.lv

2. Historical data on the epidemiological evolution of the disease

Provide a concise description on the target population (species, number of herds and animals present and under the programme), the main measures (sampling and testing regimes, eradication measures applied, qualification of herds and animals, vaccination schemes) and the main results (incidents, prevalence, qualification of herds and animals). The information is given for distinct periods if the measures were substantially modified. The information is documented by relevant summary epidemiological tables (point 6), complemented by graphs or maps (to be attached).

(max. 32000 chars) :

No epidemiological data is available. Bluetongue has been never registered in Latvia. In 2012, 235 seropositive animals were detected through the surveillance programme in 54 holdings. However this situation was defined as "vaccine incident" by the European Commission.

3. Description of the submitted programme

Provide a concise description of the programme with its main objective(s) (monitoring, control, eradication, qualification of herds and/or regions, reducing prevalence and incidence), the main measures (sampling and testing regimes, eradication measures to be applied, qualification of herds and animals, vaccination schemes), the target animal population, the area(s) of implementation and the definition of a positive case.

(max. 32000 chars) :

Programme has been developed with the target to carry out monitoring of susceptible animals in all territory of Latvia during vector active period and to vaccinate all susceptible population (bovine, ovine and caprine animals) against bluetongue (most probably serotype 8, but also in case of other BT

Standard requirements for the submission of programme for eradication, control and monitoring

serotype) in 2015 in case of occurrence of the disease. Vaccination (in a case of outbreak) will be mandatory in all territory of Latvia. Programme will include monitoring measures within BT restricted area (in a case of outbreak) and outside restricted area (in a peace time). Serological monitoring with sentinel animals will be used as a tool for virus circulation control. Serological, virological and entomological monitoring also will be carried out in a case of outbreak.

4. Measures of the submitted programme

4.1 Summary of measures under the programme

Duration of the programme : 2015

First year :

- Control
- Testing
- Slaughter and animals tested positive
- Killing of animals tested positive
- Vaccination
- Treatment
- Disposal of products
- Eradication, control or monitoring

Standard requirements for the submission of programme for eradication, control and monitoring

4.2 Organisation, supervision and role of all stakeholders involved in the programme

Describe the authorities in charge of supervising and coordinating the departments responsible for implementing the programme and the different operators involved. Describe the responsibilities of all involved.

(max. 32000 chars) :

The Food and Veterinary Service (FVS) of the Republic of Latvia is a state administrative institution headed by the CVO and supervised by the Ministry of Agriculture.

The FVS consists of the central body placed in Riga and territorial structural units (the local level)- 10 regional offices and one city office. The central body coordinates activities of the local level and ensure a unified implementation and surveillance of legislation. The local level carries out the official surveillance in accordance with the state surveillance programmes and reports to the central body. The State authorised veterinarians report to the respective local veterinary office.

Vaccination will be supervised by Veterinary Surveillance Department of FVS (Central authority).

4.3 Description and demarcation of the geographical and administrative areas in which the programme is to be implemented

Describe the name and denomination, the administrative boundaries, and the surface of the administrative and geographical areas in which the programme is to be applied. Illustrate with maps.

(max. 32000 chars) :

Programme will be implemented in whole territory of Latvia.

4.4 Description of the measures of the programme

A comprehensive description needs to be provided of all measures unless reference can be made to Union legislation. The national legislation in which the measures are laid down is mentioned.

4.4.1 Notification of the disease

(max. 32000 chars) :

Bluetongue is immediately and compulsory notifiable disease in Latvia.

According to Veterinary Medicine law every person handling animals must notify to veterinarian/ FVS inspector about suspected cases. After reception of such information state authorized veterinarians and /or inspectors are obliged to visit possibly affected holding, carry out epidemiological investigation and take samples to confirm or rule out BT. Veterinarians are financed for these activities from FVS

Standard requirements for the submission of programme for eradication, control and monitoring

budget. Since 2006, awareness campaigns and trainings have been organized for veterinarians, inspectors and animal owners, leaflets issued by FVS. Samples are tested by National Reference laboratory (NRL).

4.4.2 Target animals and animal population

(max. 32000 chars) :

Target species will be bovine, ovine and caprine. The number of animals for testing will be determined by National BT surveillance programme.

BT is compulsory notifiable disease in Latvia since 1998.

There are 29 541 herds with 406 488 bovine animals registered in Latvia at the time of preparation of programme.

There are 4 280 sheep herds with 84 849 animals and 2 827 goat herds with 12 620 animals registered in Latvia at the time of preparation of programme.

4.4.3 Identification of animals and registration of holdings

(max. 32000 chars) :

Regulation of Cabinet of Ministers No 650, 16 August, 2011 "Order of registration of animals, herds and holdings and identification of animals" determines order of individual identification of cattle, pigs, sheep, goats and horses and registration of holdings of agricultural animals, bee gardens, fishponds, hatcheries of aquatic animals (Repealing Regulation of Cabinet of Ministers No 712, 16 December, 2003 "Order of registration of animals, herds and holdings and identification of animals"). This regulation is harmonised with Council Directives 92/100/EEC and 90/427/EEC.

Vaccinated bovine animals, ovine and caprine animals as well will be identified with the mark and additional ear tag (in red color).

To ensure common data registration system, Agricultural Data Centre (ADC) maintains central register of animals, herds and holdings. ADC is a state agency under the supervision of the Ministry of Agriculture.

4.4.4 Qualifications of animals and herds

(max. 32000 chars) :

At the moment of preparation of the programme all bovine, ovine and caprine herds are free from BT.

4.4.5 Rules of the movement of animals

(max. 32000 chars) :

All bovine, ovine and caprine animal movements are recorded in National data base. In a case of BT suspects or outbreak movement restrictions will be applied to index holding and linked holdings.

Standard requirements for the submission of programme for eradication, control and monitoring

4.4.6 Tests used and sampling schemes

(max. 32000 chars):

Suspected animals will be tested to BT antibodies using ELISA test. Positive samples will be confirmed with PCR.

Monitoring in a case of outbreak will be carried out using sentinel animals. Bovine animals will be used as sentinel animals and will be tested to BT antibodies before putting in herds. During vector activity season each sentinel animal will be sampled once per month and tested to antibodies using ELISA. Entomological monitoring of Culicoides will also be carried out in BT restricted zone during vector active season.

Serological monitoring (to detect virus incursion in country) will be carried out in all territory of Latvia. In a frame of the bluetongue active surveillance in 2015, all susceptible animals according to conditions of the EC Regulation 1266/2007 (Annex I, 2.2.point) will be investigated to detect prevalence of 20% with 95% confidence in one geographical unit. According to Regulation 1266/2007 Annex I, 1.point, FVS defined the geographical unit of around 2 000 km² (45x45km) which is approximately equal with territory of the three-counties (administrative territory) of Latvia (in total 110 counties are in Latvia). Total number of samples to be taken will be divided depending on a number of geographical units and the population size in each of 10 territories of FVS (excluding Riga city) every month during vector active season only blood samples from susceptible animals – cattle, sheep and goats will be tested. Animals subjected to serological testing will be not younger than 6 months at the moment of sampling and not born before January 2013.

4.4.7 Vaccines used and vaccination schemes

(max. 32000 chars):

The vaccination (with inactivated vaccine) against BTV8 or another BT serotype will be carried out in case of BT outbreak. Vaccine will be purchased by Food and Veterinary Service and distributed to territorial structural units of FVS. Vaccination will be provided by FVS authorized veterinarians, in accordance with the producer's instructions.

4.4.8 Information and assessment on bio-security measures management and infrastructure in place in the holdings involved.

(max. 32000 chars):

Inspections will be carried out in all animal holdings with susceptible animals in restricted zone. Detailed inspections will also include assessment of bio-security measures in place and documental checks.

4.4.9 Measures in case of a positive result

Standard requirements for the submission of programme for eradication, control and monitoring

A short description is provided of the measures as regards positive animals (slaughter, destination of carcasses, use or treatment of animal products, the destruction of all products which could transmit the disease or the treatment of such products to avoid any possible contamination, a procedure for the disinfection of infected holdings, the therapeutic or preventive treatment chosen, a procedure for the restocking with healthy animals of holdings which have been depopulated by slaughter and the creation of a surveillance zone around infected holding)

(max. 32000 chars) :

According the Latvian Food and Veterinary Service Order No 96, 22.12.2006. „Instruction on the control and eradication of the Blue tongue” (elaborated in accordance with requirements set in Council directive 2000/75/EC) in case of BT outbreak we are going to:

- 1) retest of all serologically positive animals with PCR tests,
- 2) immediate culling and disposing of all PCR positive animals,
- 3) protect animals against vector attacks (repellents and insecticides),
- 4) serological examination (ELISA) for all sentinels in the farms within the restriction zones,
- 5) entomological surveillance,
- 6) emergency vaccination.

4.4.10 Compensation scheme for owners of slaughtered and killed animals

(max. 32000 chars) :

Regulation of Cabinet of Ministers No 177, 15 March 2005, “Procedure according to which compensations are given or owner of animals receive compensations for losses which have arise due to eradication of epizootics or animal infectious diseases” determines procedure according to which compensations are given or owner of animals receive compensations for losses which have arisen due to eradication or outbreaks of animal infectious diseases, which are under state supervision.

4.4.11 Control on the implementation of the programme and reporting

(max. 32000 chars) :

National Reference laboratory will provide FVS with reports on numbers of tested samples and animals on regularly basis. FVS will check those reports ensuring that number of animals determined in programme is tested. NRL has to notify immediately positive results to FVS.

5. Benefits of the programme

A description is provided of the benefits of the programme on the economical and animal and public health points of view.

(max. 32000 chars) :

The main benefit of the programme is keeping Latvia free from Bluetongue. Control and limit of Bluetongue spreading in Republic of Latvia (in case of outbreak).

For brucellosis (bovine and small ruminants) and tuberculosis, if an annual programme is submitted, please provide also the targets for herd incidence and prevalence , and the animal prevalence for at least 3 years (including the year for which the programme is submitted).

Total					1 838 610,00 €		

Standard requirements for the submission of programme for eradication, control and monitoring

8.2 Co-financing rate:

The maximum co-financing rate is in general fixed at 50%. However based on provisions of Article 5.2 and 5.3 of the Common Financial Framework, we request that the co-financing rate for the reimbursement of the eligible costs would be increased:

- Up to 75% for the measures detailed below
- Up to 100% for the measures detailed below
- Not applicable

8.3 Source of national funding

Please specify the source of the national funding:

- public funds*
- food business operators participation*
- other*

Please give details on the source of the national funding (max 32000 characters)

Funding for programme implementation will be available from state budget
