

Highly pathogenic avian influenza

Current Situation in Germany

SCoPAFF-meeting on 15-16.02.2023

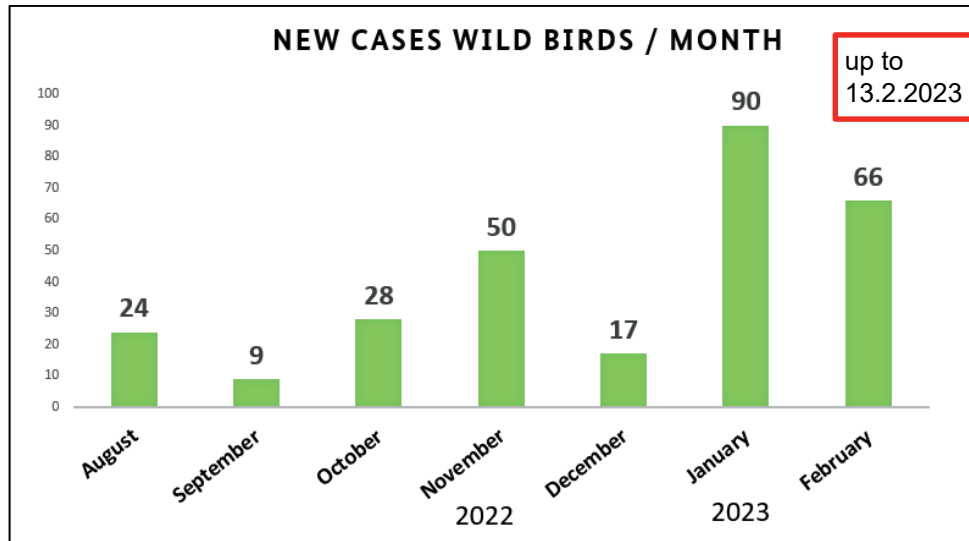

Content

1. Wild birds
2. Poultry and captive birds
3. Summary

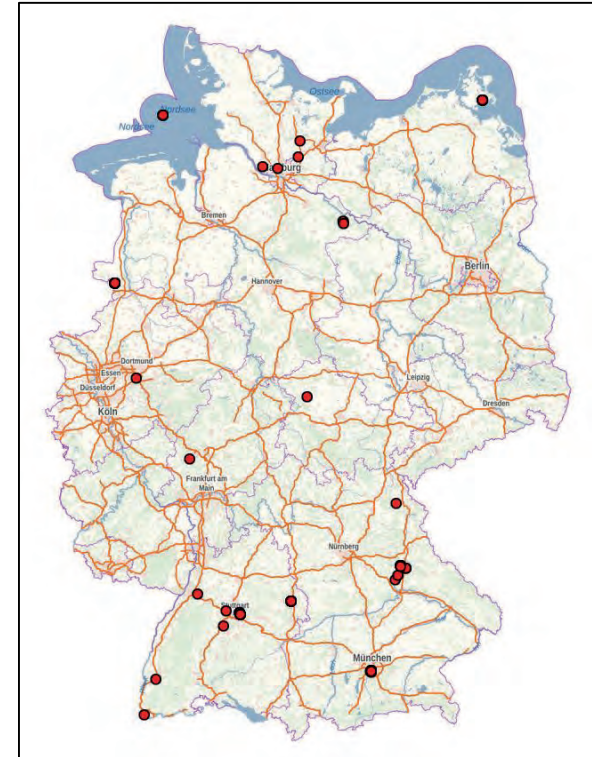

Evolution in wild birds

Increase of HPAI cases in wild birds in January and February

Distribution of HPAI cases in wild birds in February: whole territory of Germany

Situation in **poultry** and **captive birds**

Period		Number of outbreaks						
<ul style="list-style-type: none"> • Active outbreaks on <u>13.2.2023</u> • <i>(Suspicions: 2)</i> 		84						
<ul style="list-style-type: none"> • New outbreaks from 17.1.2023 (last PAFF) until 13.2.2023 <table border="1"> <tr> <td>Poultry (turkeys + ducks fattening)</td> <td>2</td> </tr> <tr> <td>Back yards</td> <td>12</td> </tr> <tr> <td>Zoos</td> <td>4</td> </tr> </table>		Poultry (turkeys + ducks fattening)	2	Back yards	12	Zoos	4	18
Poultry (turkeys + ducks fattening)	2							
Back yards	12							
Zoos	4							
New Season from 15.7.2022 until 13.2.2023:		198 (114 lifted)						

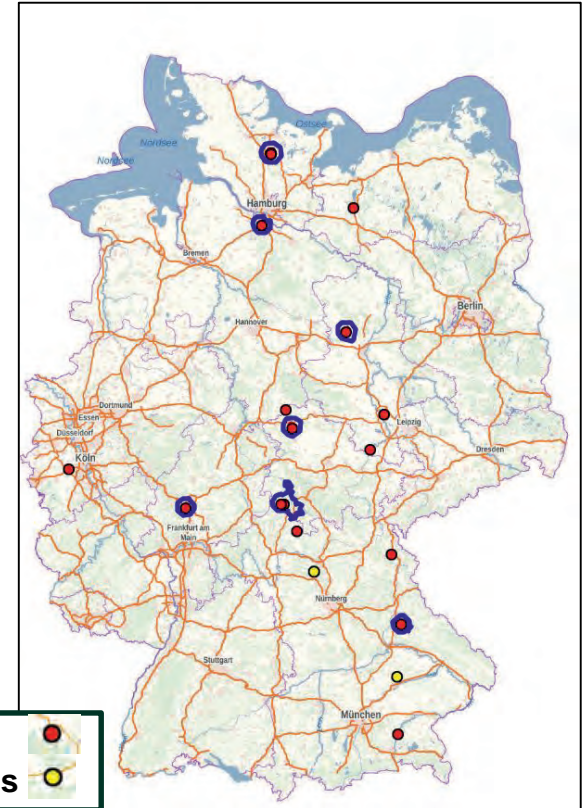

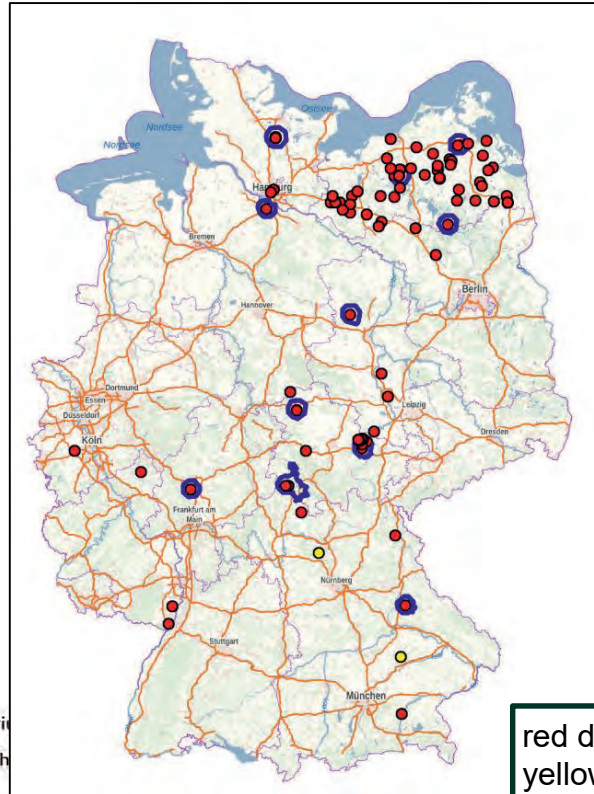

Evolution: Poultry and captive birds

Active outbreaks on 13.2.2023

Outbreaks 17 JAN-13 FEB 2023

In several establishments the lifting of measures takes long due to the period necessary for the final disinfection of manure.

Bundesministerium
für Ernährung
und Landwirtschaft

Evolution: Poultry and captive birds

Infected establishments 15.7.2022 – 13.2.2023

Summary

- Number of cases in wild birds has increased significantly.
- Number of HPAI outbreaks in poultry and captive birds relative low.
- Biosecurity measures in place.
- Still essential: awareness.
