

EUROPEAN COMMISSION
HEALTH & CONSUMERS DIRECTORATE-GENERAL
Unit 04 - Veterinary Control Programmes

SANCO/3926/2008

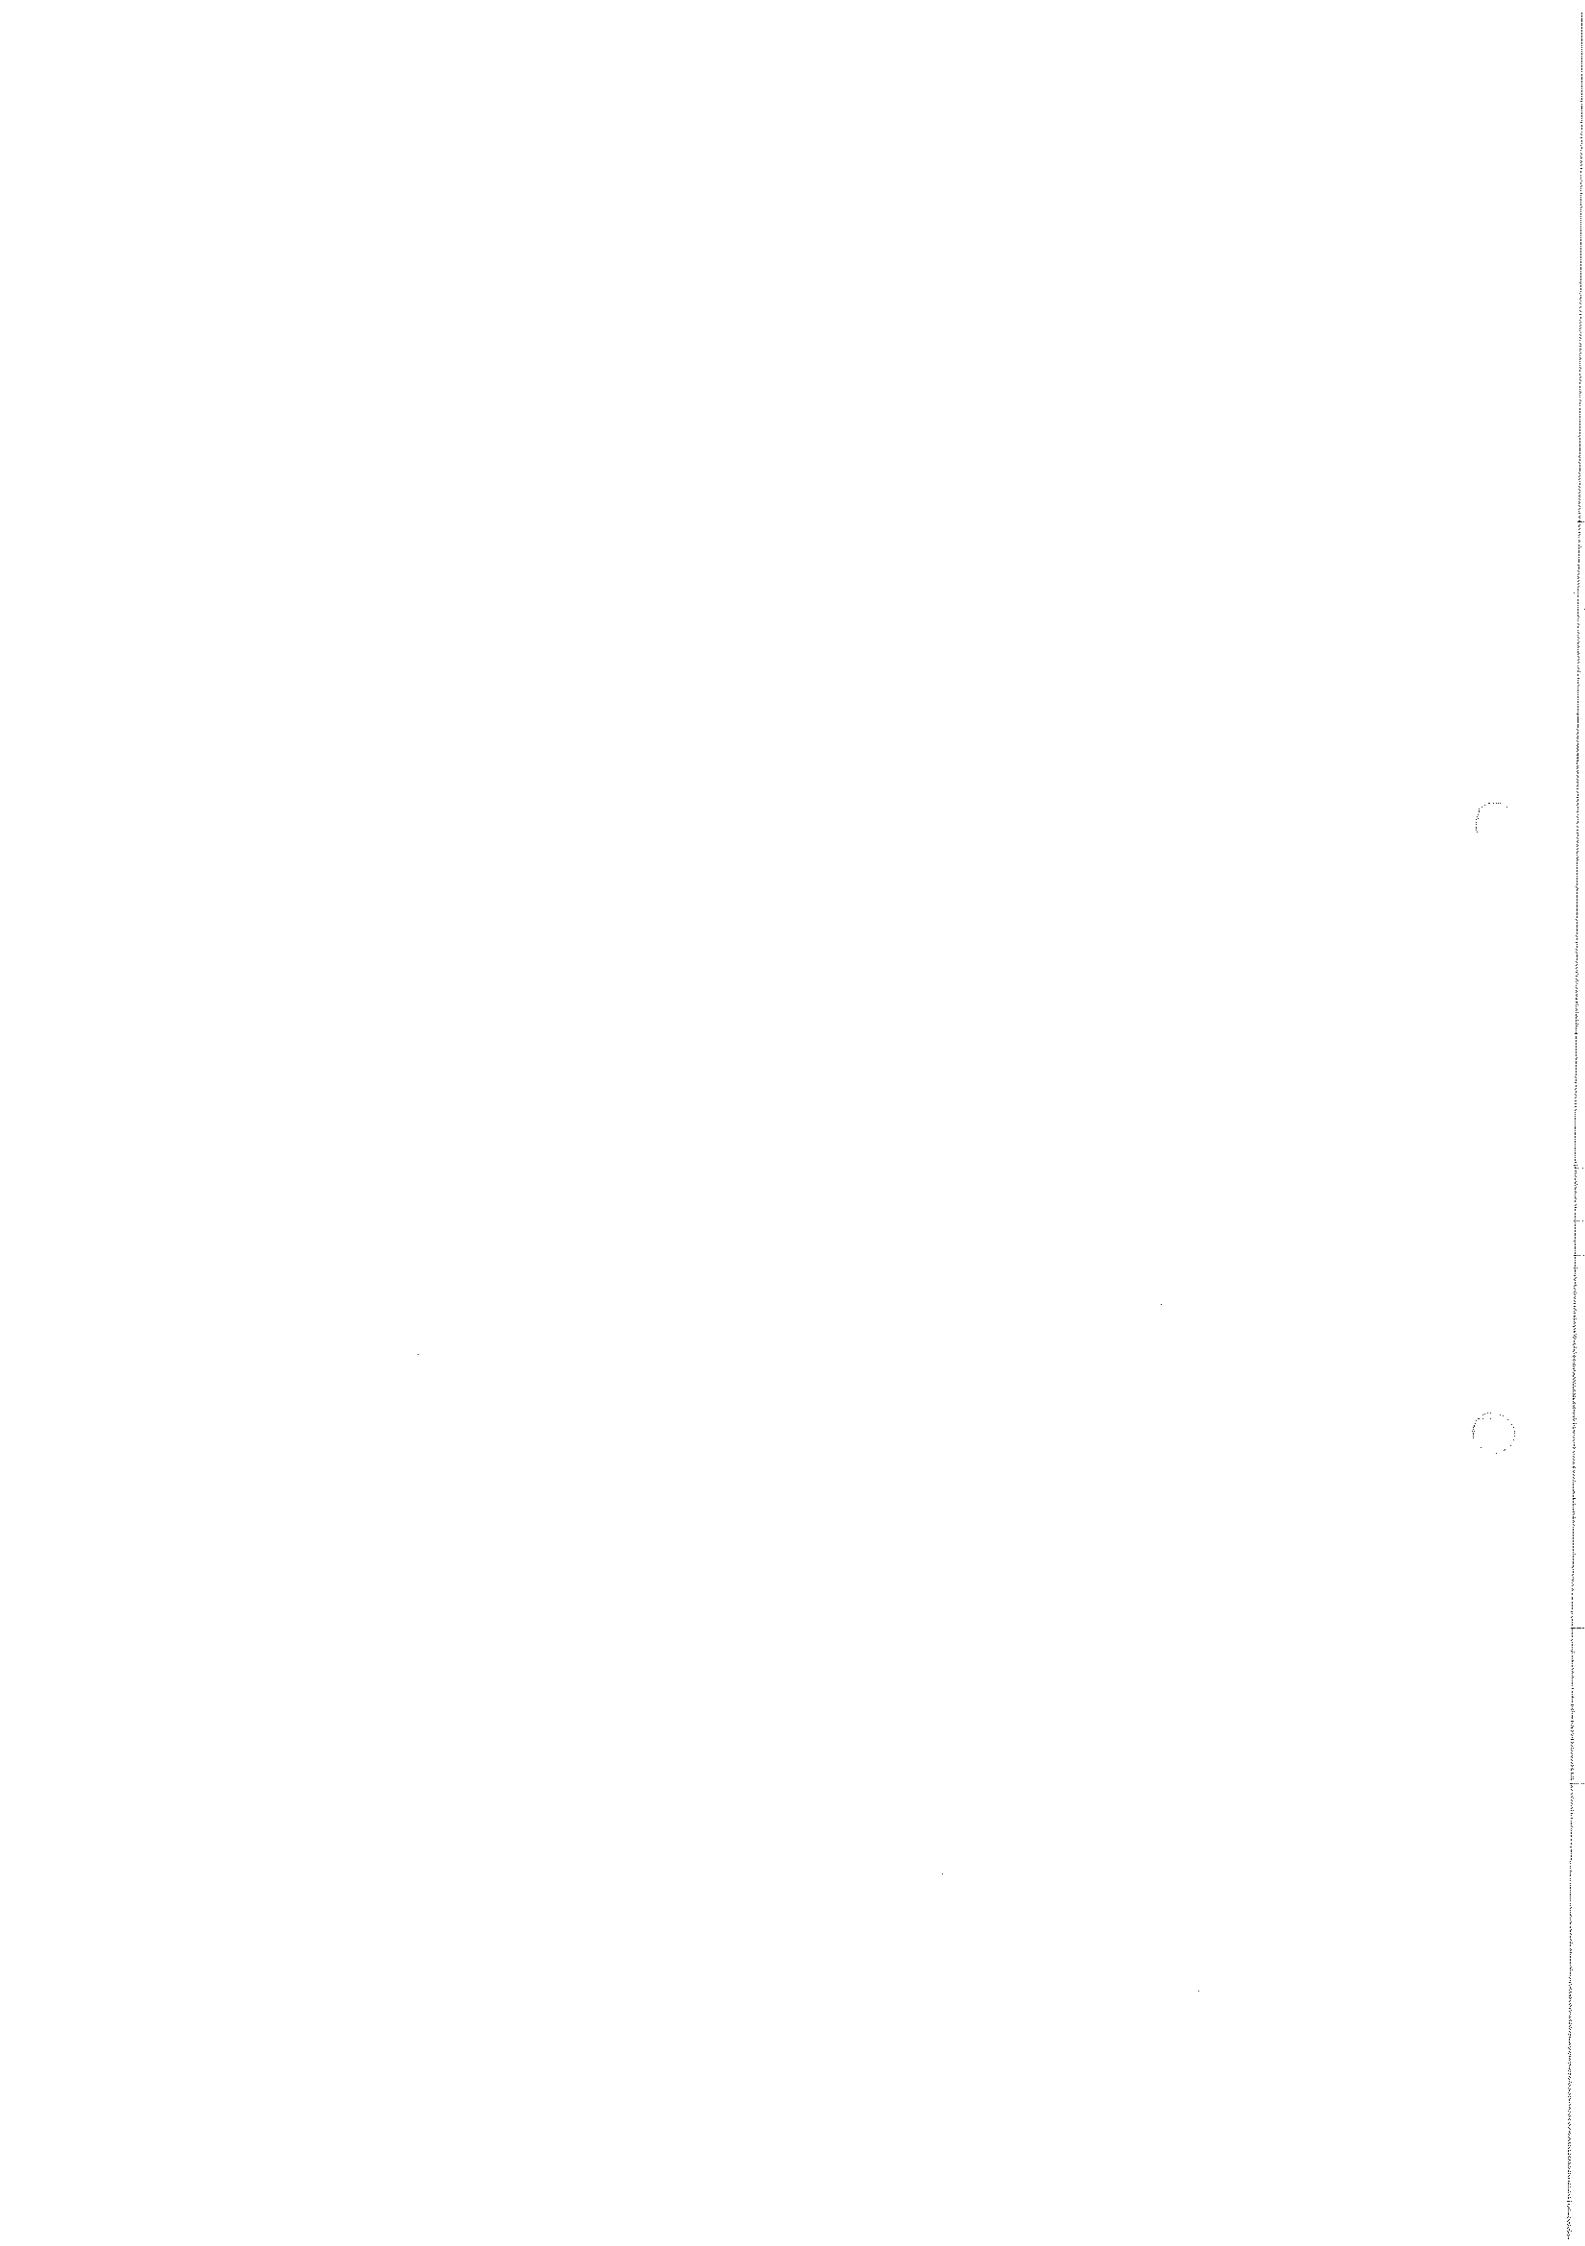

Programmes for the eradication, control and monitoring of certain animal diseases and zoonoses

Eradication programme of Enzootic Bovine Leucosis

Approved* for 2009 by Commission Decision 2008/897/EC

Malta

* in accordance with Commission Decision 90/424/EEC

1. Identification of the programme

Member State:	Malta
Disease:	Enzootic Bovine Leukosis
Year of implementation	2009
Reference of this document	MT-EBL-09
Contact	<p>Dr. Anthony Gruppetta Phone: +356 25905168 Fax: +356 25905182 e-mail: cvo.mrae@gov.mt</p> <p>Dr. Susan Chircop Phone: +356 25905304 Fax: +356 25905182 e-mail: susan.chircop@gov.mt</p>
Date sent to Commission:	30 th April 2008

2. Historical data on the epidemiological evolution of the disease

In 2002, an EU funded epidemiological survey on Enzootic Bovine Leukosis was carried out in the bovine population of Malta and Gozo in accordance with the EU veterinary *acquis*. Serological tests were carried out in EU National Reference laboratory over a one-year period (VLA, Weybridge - UK). Bovines over 2 years of age were tested once during the year 2002.

A relatively small percentage of bovines resulted EBL positive (9.2%); however nearly a quarter of the dairy farms are EBL positive.

The regional distribution of EBL positive herds cannot be taken into consideration due to the close proximity of the farms and the limited overall surface area of the Maltese territory.

After 2002 no more testing for EBL was undertaken. During this time no EBL positive were slaughtered in view of eradicating the disease. The only provision taken at the time was to prohibit the transfer of animals from positive holdings to negative ones.

Testing recommenced in July 2007. It was immediately noticed from the new data available that there has been an increase in the prevalence of the disease.

Bovine population of Malta and Gozo (National herd database 31-12-07)

MDP (Milk dairy producers)

Cows over 2 years	Heifers <=1 year	Heifers 1 to 2 years	Calves < 3 months	Breeding Bulls	Fattening Bulls
7999	2740	2552	1881	463	3552

NON-Malta Dairy Products

Bovine animals
2040

Milk Survey in 2007

In July 2007 two surveys on bulk milk samples from all milking farms was undertaken. In the first survey 121 farms were tested using bulk milk samples by ELISA. Out of the 121 bulk milk samples tested, 62 tested positive. In October 2007 all the farms that had tested negative in July were re tested again using bulk milk samples. All the 59 negative farms retested negative.

Tests on bulk milk samples in July 2007

Number of farms tested	Number of Farms Positive	Number of Farms Negative
121	62	59

Tests on bulk milk samples in October 2007

Number of farms tested	Number of Farms Positive	Number of Farms Negative
59	0	59

In December 2007 individual cow testing by ELISA using serum samples commenced. To date 54 farms have been tested. In all 2878 individual animals have been tested, out of which, 530 have tested positive while 2348 have tested negative

Individual cow tests

Number of farms tested	Number of animals tested	Number of animals positive	Number of animals negative
54	2878	530	2348

3. Description of the submitted programme

The main objective of the programme is to control and eradicate EBL from bovine herds in Malta and Gozo, in accordance to Directive 77/391 and Council Directive 64/432. As EBL affects the immune system of cattle, its impact on herd health and agricultural economy are far reaching as infected animals more susceptible to a number of diseases.

Animals which result positive to one serological test will be slaughtered and repopulated with EBL free animals. A herd in which EBL positive animals are found will be classified as EBL positive until all animals tested twice yearly for two years give negative results. Calves of EBL- positive cows will not be slaughtered.

If all animals in a herd test negative to two consecutive tests in the space of 6 months, the herd will be classified as EBL negative. The measures taken in the programme will be testing and slaughter of all cattle found positive to EBL through an ELISA test carried out at the National Veterinary Laboratory. The sampling regime will follow that laid down in EU legislation.

The target animal population will include all bovine animals over 2 years while for control of EBL positive farms, all bovine animals over a year will be tested.

The programme will cover the islands of Malta and Gozo which for the purpose of this programme will be considered as one region.

4. Measures of the submitted programme

4.1. Summary of measures under the programme

Duration of the programme:

First year: 2009

First year:

- | | |
|---|---|
| <input type="checkbox"/> Control | <input type="checkbox"/> Eradication |
| <input type="checkbox"/> Testing | <input type="checkbox"/> Testing |
| <input type="checkbox"/> Slaughter of animals tested positive | <input type="checkbox"/> Slaughter of animals tested positive |
| | <input type="checkbox"/> Killing of animals tested positive |
| | <input type="checkbox"/> Extended slaughter or killing |
| | <input type="checkbox"/> Disposal of products |

4.2. Organisation, supervision and role of all stakeholders¹ involved in the programme:

The Veterinary Regulation, Fisheries Conservation and Control is the Central authority based in Malta is responsible for the administration, sampling, laboratory testing, slaughtering, collection and reporting of all data pertaining to this control and eradication programme. The Ministry of Gozo (Veterinary Division) is only responsible for sampling in Gozo.

The National Veterinary Laboratory:

(i) Senior veterinary officer will be responsible for:

- ensure that samples are analysed in accordance to time frame and methodology as laid down in the programme
- reporting results to the animal health section and CVO
- collecting/ filing all relevant data.

Animal Health Department:

(ii) Veterinary support officer in charge of the bovine section will be responsible for:

- co-ordinating sampling team
- making appointments with the farmers and preparing daily sampling schedules
- collaborating with the senior veterinary officer i/c lab
- organizing on farm investigation in cases of suspect/confirmed positive results
- collaborate in census, movement restriction, eradication and disinfection measures
- collaborate in farm investigations in view of repopulation of farms.

(iii) Assistant Veterinary Support Officers will be responsible for:

- Ensuring to follow appropriate training
- collecting and transporting samples appropriately
- deliver samples within 24hours from collection to the laboratory
- ensure that accompanying documents are filled appropriately

(iv) Veterinary Officer responsible for by –products:

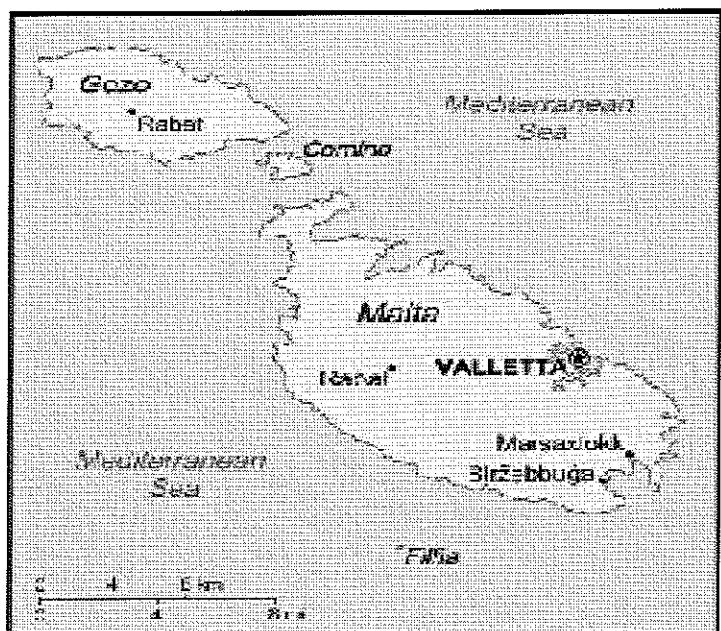

- is responsible of ensuring that biosecurity measures and provisions in Council Regulation 1174/2002 are adhered to during disposal of carcasses and products.

(v) Chief Veterinary Officer

Following recommendations from senior veterinary officer i/c lab and veterinary officer i/c of bovine section the CVO be responsible for:

- Issuing an EBL free status document for the farm.
- Responsible of issuing restriction movement documents
- Issuing document for lifting restriction measures on a farm and /or permitting repopulation.

4.3. The Islands of Malta and Gozo are covered by this programme and are considered as one region. The Veterinary regulation Fisheries Conservation and Control Division administers the whole region.

4.4. Description of the measures of the programme:

4.4.1. Notification of the disease:

Veterinary Services Act, Chapter 437 of the laws of Malta, sections 5 and 6

Legal Notice 314/2005 Chapter 437 of the Veterinary Services Act, "Measures for the Eradication of Brucellosis, Tuberculosis and Leucosis in cattle rules"

Prevention of Disease Ordinance, Chapter 36 of the laws of Malta, section 68

4.4.2. Target animals and animal population:

All bovine animals over 24 months for surveillance purposes and all animals over 12 months for control purposes.

Bovine population of Malta and Gozo (National herd database 31-12-07)

MDP (Milk dairy producers)

Cows over 2 years	Heifers <=1 year	Heifers 1 to 2 years	Calves < 3 months	Breeding Bulls	Fattening Bulls
7999	2740	2552	1881	463	3552

NON-Malta Dairy Products

Bovine animals
2040

4.4.3. Identification of animals and registration of holdings:

Veterinary Services Act, section 7

Milking Animals Regulation S.L. 36.32 section 3

All livestock holdings are registered with the Veterinary Regulation, Fisheries Conservation and Control. Milk producing herds are allotted a unique herd number (churn number), while non milk producing herds are allotted a unique premises number. All the information pertinent to each farm is also kept on the National Herd database. This system covers bovine, ovine and caprine holdings.

European Union Act, Chapter 460 of the laws of Malta, section 3-4

Regulation (EC) No 1760/2000 of the European Parliament and of the Council of 17 July 2000 establishing a system for the identification and registration of bovine animals and regarding the labelling of beef and beef products and repealing Council regulation (EC) No 820/97

Council Directive 92/102/EEC of 27 November 1992 on the identification and registration of animals (amended by OJ L 005 09.01.2004 p.8)

Control of marking of animals regulation S.L. 36.17 sections 2-3

Undulant fever (prevention) regulation S.L. 36.04 section 4

All bovine, caprine and ovine animals are tagged and all the information is stored in the National Herd database. The transfer or movement of animals from one holding to another can only be done with the authorisation of the competent authority.

4.4.4. Qualifications of animals and herds

Qualification of animal herds is in accordance with Council Directive 64/432.

Legal Notice 314/2005 Chapter 437 of the Veterinary Services Act, "Measures for the Eradication of Brucellosis, Tuberculosis and Leucosis in cattle rules"

4.4.5. Rules on the movement of animals:

Prevention of Disease among animals S.L. 36.20 sections 16-17

Legal Notice 314/2005 Chapter 437 of the Veterinary Services Act, "Measures for the Eradication of Brucellosis, Tuberculosis and Leucosis in cattle rules"

Foot and Mouth Disease regulation S.L. 36.05, section 4

Control of Foot and Mouth disease regulation S.L. 36.27 section 2

Undulant fever (prevention) regulation S.L. 36.04 section 7

No movement of animals shall be allowed from positive farms, animals from such farms will only be allowed movement if destined for slaughter.

4.4.6. Tests used and sampling schemes:

Testing will be carried out by the National Veterinary Laboratory using ELISA. Sampling will be coordinated by the animal health section and will cover all animals over 2 years for surveillance purposes and animals over 1 year for control purposes. Testing will be carried out in accordance to the provisions laid down in Council Directive 64/432.

4.4.7. Vaccines used and vaccination schemes:

Not applicable.

4.4.8. Information and assessment on bio-security measures management and infrastructure) in place in the holdings involved:

Detailed guidelines for good husbandry practices and biosecurity measures on bovine farms have not yet been compiled. However general guidelines are covered in the Code of Good Agriculture Practice (Cogap).

It covers certain practices such as:

- the guidelines for storage of feed
- the quality of building material
- need for a vehicle disinfection pits
- necessity of a manure clamp

All farms producing manure have to store solid manure in an enclosed place known as the manure clamp, for six months a year (from the 15th October to 15th March). All farms are to have a leak proof cesspit, to collect foul water arising from cleaning etc. The manure clamp is to be connected to the cesspit. The water is kept for 15 days then collected by a bowser. These regulations serve to reduce the environmental pollution and the nitrate level in fields fertilised with manure. However, they also provide a tool to permit biosecurity measures to limit spread of disease.

4.4.9. Measures in case of a positive result

Once a positive animal or herd is identified an order of stop movement is issued by the CVO. This is followed by an on farm inspection where a complete census is carried out and the animals on farm are cross checked with data held in the National Livestock Database. Animals which test positive to the ELISA test shall be sent for slaughter and may be passed for human consumption if deemed fit by the official Veterinarian at the slaughter house.

If the percentage of positive animals within a herd is over 80% the CVO may decide to allow the slaughter of all animals on the farm including those animals that do not react positive to the ELISA test.

A manual of guidelines detailing procedures to limit contamination and the spread of EBL is being compiled. Re stocking with EBL-free animals will be allowed only after an inspection of the holding is carried out to confirm that all identified animals have been slaughtered and all recommended measures for hygiene and proper management have been observed.

4.4.10. Compensation scheme for owners of slaughtered and killed animals:

Legal Notice 314/2005 Chapter 437 of the Veterinary Services Act, "Measures for the Eradication of Brucellosis, Tuberculosis and Leucosis in cattle rules"

Foot and Mouth Disease regulation S.L. 36.05, section 4

Cattle plague regulations S.L. 36.14 section 7

Compensation for slaughtered animals regulation S.L. 36.18 sections 3-6, schedule regulation 4 sections 2, 3, 5.

Beef Herds	Male	Female
0 to 3 months	419.29	232.94
3 to 6 months	559.00	372.70
6 months to 12 months	745.40	559.05
12 months to 18 months	885.16	698.81
Dairy Herds	Male	Female
0 to 3 months	232.94	232.94
6 months to 12 months	465.87	465.87
12 months to 18 months	978.24	931.75
Pregnant cow		2096.44
Milking cow		2329.37

4.4.11. Control on the implementation of the programme and reporting:

Legal Notice 314/2005 Chapter 437 of the Veterinary Services Act, “Measures for the Eradication of Brucellosis, Tuberculosis and Leucosis in cattle rules”

5. Benefits of the programme

As EBL affects the immune system of cattle, its impact on herd health and agricultural economy are far reaching as infected animals more susceptible to a number of diseases. Therefore it is in the interest of the producer to eliminate this disease from the national herd as not only will there be no trade barrier but due to the improved health status of the animals there will be an increase in production. With the growing concern for safer food by the consumer an improved animal health status will result in a better perception of dairy products by consumers.

6. Data on the epidemiological evolution during the last five years²

6.1. Evolution of the disease³
