

Format to report amounts of food waste - concept

Bartosz Zambrzycki

European Commission, DG Health and Food Safety
Unit E1, Food information and composition,
food waste

- **Reporting format will be adopted as implementing act following the voting in the Waste Committee.**
- **Deadline for adoption – 31.03.2019**
- **Reporting format will depend very much on agreed methodology – in particular the scope of monitoring**

Stage of the food supply chain	Food wasted destined to waste treatment operations (composting, biogas, land application, incineration, landfilling)		Food waste removed to sewer/wastewater		Food sent for redistribution (food donation)
	Total	Edible fraction	Total	Edible fraction	
1. Primary Production					
2. Processing and manufacturing					
3. Distribution (including retail)					
4. Restaurants and food services					
5. households					

Grey cells mark the data which are to be reported on voluntary basis.

Further work:

- **We still need to clarify internally to what extent we could include voluntary reporting, especially of non-waste stream (food redistribution)**
- **We would like to ask for your questions and comments**
