# Household food waste measurement in Hungary

---

Dr Gyula Kasza

*programme manager*

Maradék nélkül – National Food Waste Prevention Programme

National Food Chain Safety Office

EU Platform on Food Losses and Food Waste  
Monitoring sub-group meeting  
11 May 2023

# Legal background

---

- United Nations SDG 12.3
- Directive 2008/98/EC
  - reduce the generation of food waste /.../ as a contribution to the United Nations Sustainable Development Goal to reduce by 50%
  - Member States shall monitor and assess the implementation of their food waste prevention measures by measuring the levels of food waste on the basis of the methodology established by the delegated act
- Commission Delegated Decision (EU) 2019/1597
  - Establishment of common methodology for measurement

# Hungarian reporting mechanism

---

- Ministry of Energy
- National Environmental Information System – FBOs mandatory reporting
- National Food Chain Safety Office
  - Sharing household FW data
  - Household FW surveys: 2016; 2019; 2021; 2022; (2023)
  - SMP-FOOD-2022-FoodWaste-NCA-Hungary
    - Supporting national reporting exercise
    - Ensuring the continuation of household FW survey data series
    - More details at the end of the presentation

# EU first FW reporting (Eurostat, 2022)

57 million tons

31.3 million tons

Households, EU  
average:  
70 kg/capita/year

■ Households ■ Processing ■ Food service ■ Production ■ Wholesale and retail

# UNEP FW Index (2021) vs Eurostat (2022)

---

Comparing Data from Hungary

Country Name	Reference	kg / capita food waste estimate	Confidence level
Austria	(Environment Agency Austria, 2017)	39	High
Belgium	(Flemish Food Supply Chain Platform for Food Loss, 2017)	50	Medium
Denmark	(Danish Environmental Protection Agency, 2018)	79	High
	(Edjabou et al., 2016)	83	High
Estonia	(Moora, Evelin, et al., 2015)	78	Medium
Finland	(Katajajuuri et al., 2014)	67	Medium
	(Stenmarck et al., 2016)	64	Medium
France	(ADEME, 2016)	85	Medium
Germany	(Schmidt et al., 2019)	75	High
Greece	(Abeliotis et al., 2015)	142	Medium
Hungary	(Kasza et al., 2020)	94 *	Medium
Ireland	(Stenmarck et al., 2016)	55	Medium
Italy	(Giordano et al., 2019)	67	Medium
Luxembourg	(Luxembourg Environment Ministry, 2020)	89	Medium
	(Caldeira et al., 2019)	91	Medium
Malta	(Caldeira et al., 2019)	129	High
Netherlands	(The Netherlands Nutrition Centre Foundation, 2019)	50	High
Norway	(Hanssen et al., 2016)	79	High
Poland	(Steinhoff-Wrześniewska, 2015)	56	Medium
Russian Federation	(Tiarcenter, 2019)	33	Medium
Slovenia	(Republic of Slovenia Statistical Office, 2020)	36	Medium
	(Republic of Slovenia Statistical Office, 2019)	33	Medium
Spain	(Caldeira et al., 2019)	77	Medium
		78	Medium
Sweden	(Swedish Environmental Protection Agency, 2014)	81	High
United Kingdom of Great Britain and Northern Ireland	(WRAP, 2020b)	77	High

Household food waste per capita (2020)	
EU	70
Portugal	124
Italy	107
Malta	92
Luxembourg	91
Greece	87
Lithuania	86
Austria	83
Latvia	82

Poland	60
Netherlands	59
Finland	53
Croatia	53
Ireland	48
Slovenia	36
Spain	30
Bulgaria	26
Norway	78

# Household FW survey - methodology

The methodology complies with  
**EU-FUSIONS** recommendations and **Commission Delegated Decision (EU) 2019/1597**.

**Results**

Annual household food waste per capita is **65.5 kg**.  
In total this is nearly **635 000 tons**.

# Composition of household FW

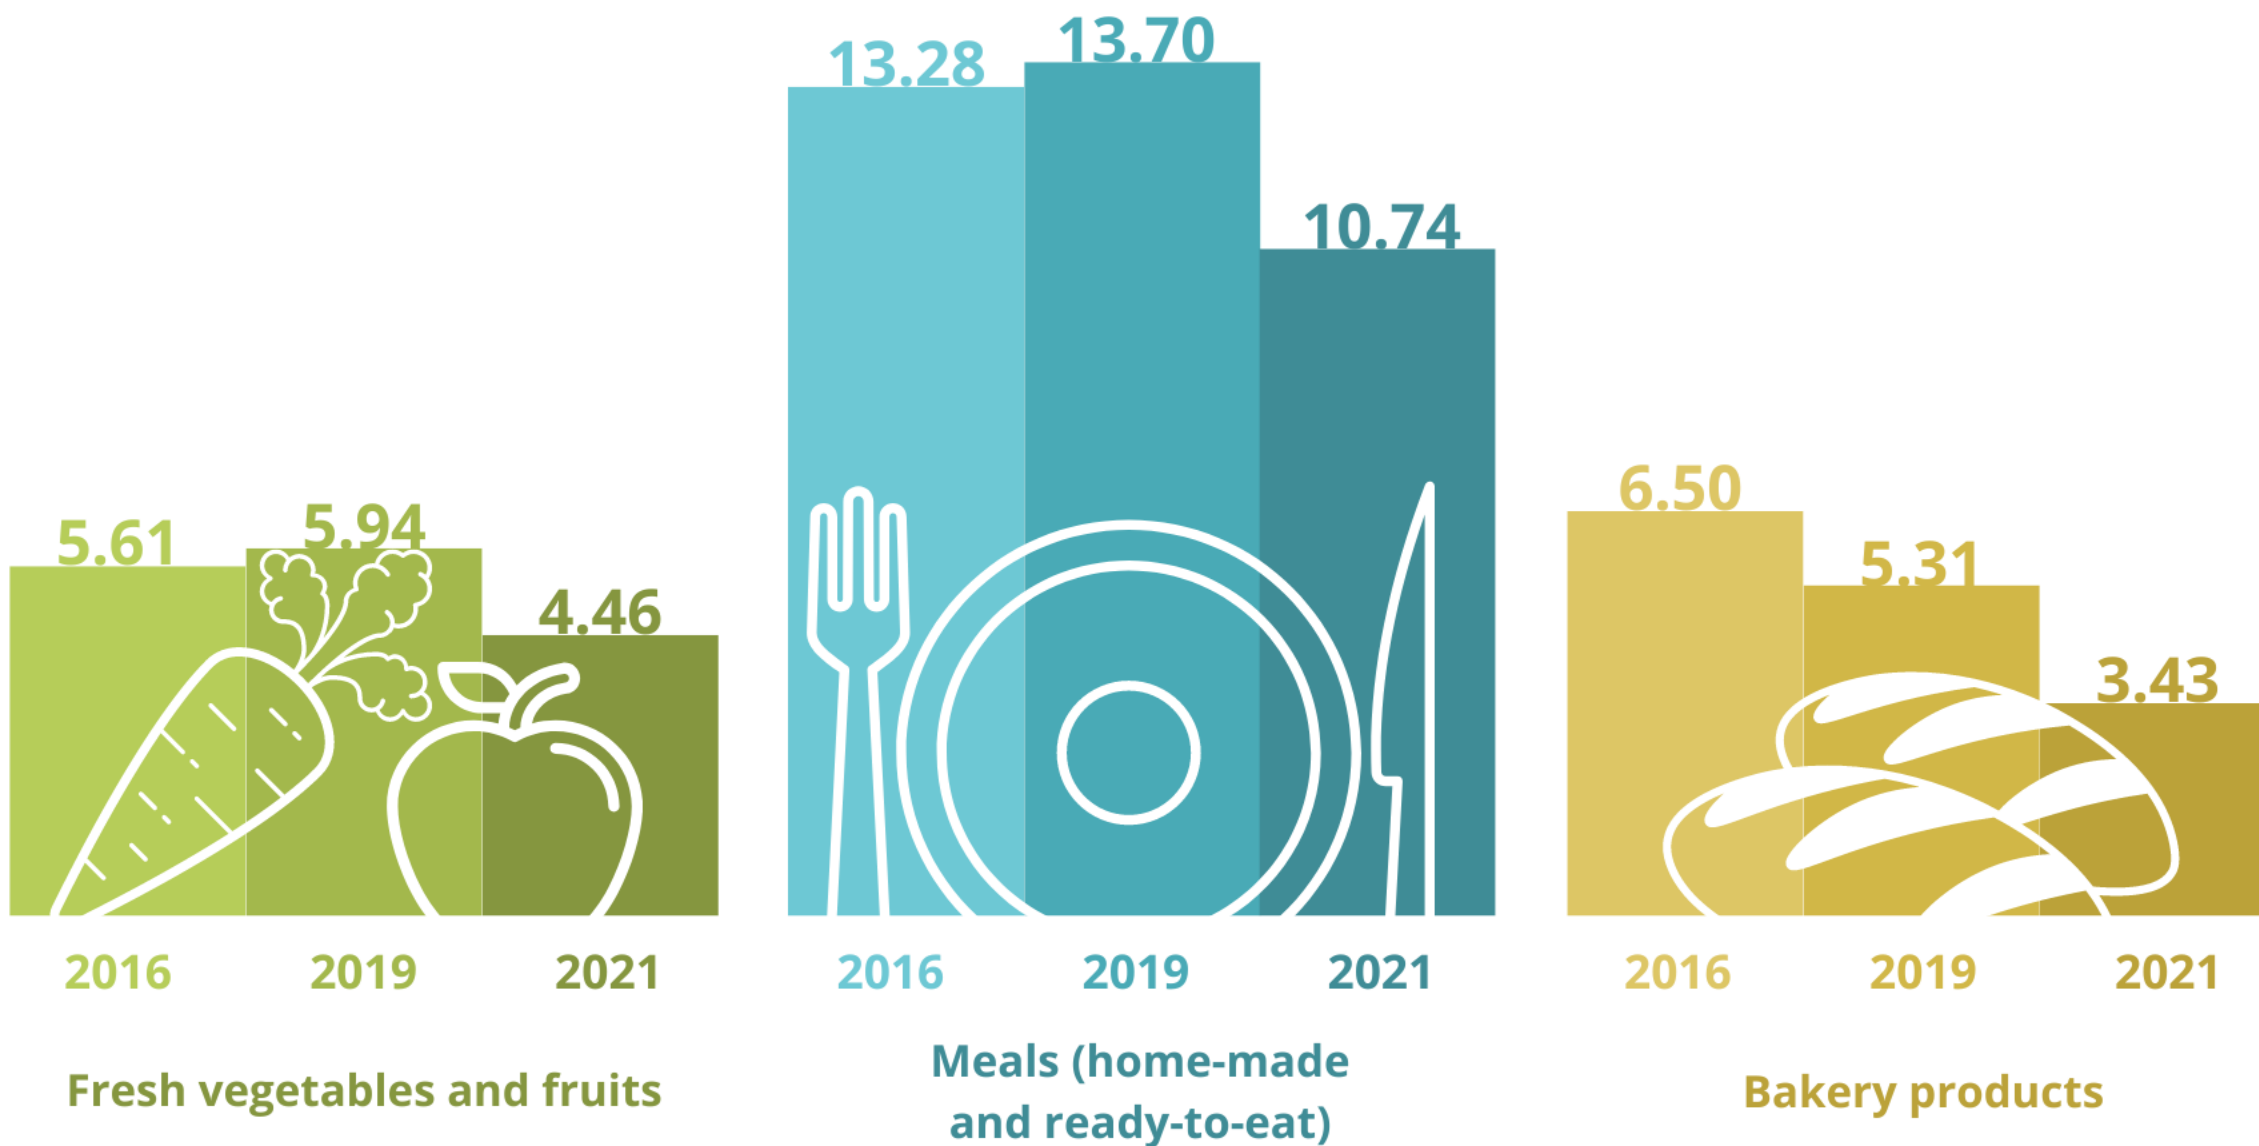

10% of food waste generated in the Hungarian households is liquid

## kg food waste / capita / year

	Liquid	Solid	Total = liquid + solid
Avoidable	5.39	19.80	25.19
Unavoidable	0.94	34.78	35.72
Potentially avoidable	1.01	3.59	4.60
Total	7.33	58.17	65.50

# Most wasted foodstuffs

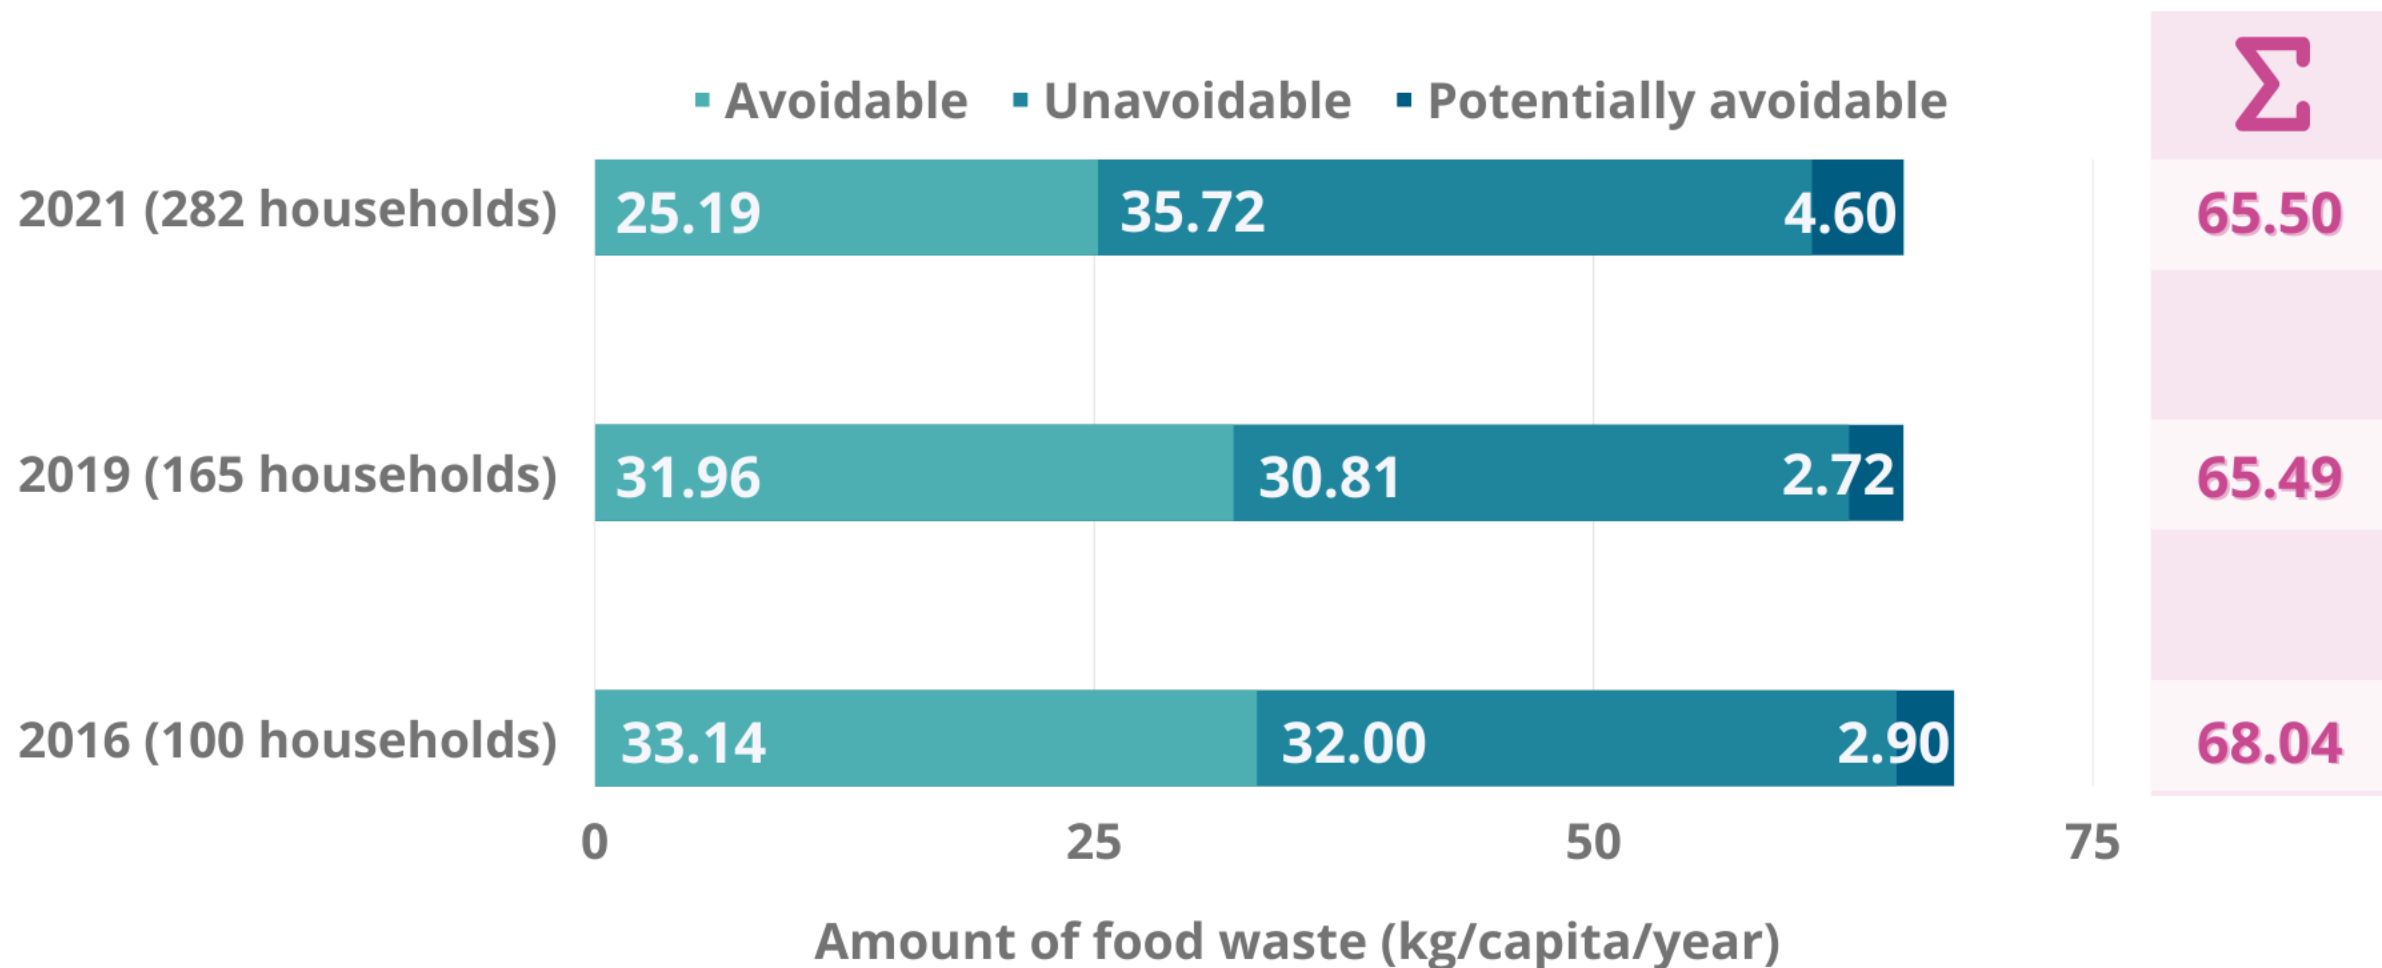

# Treatment of FW within the household

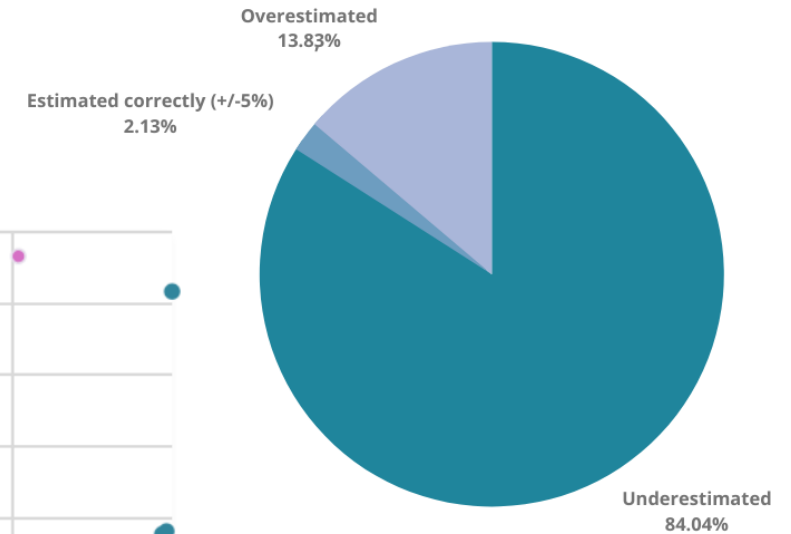

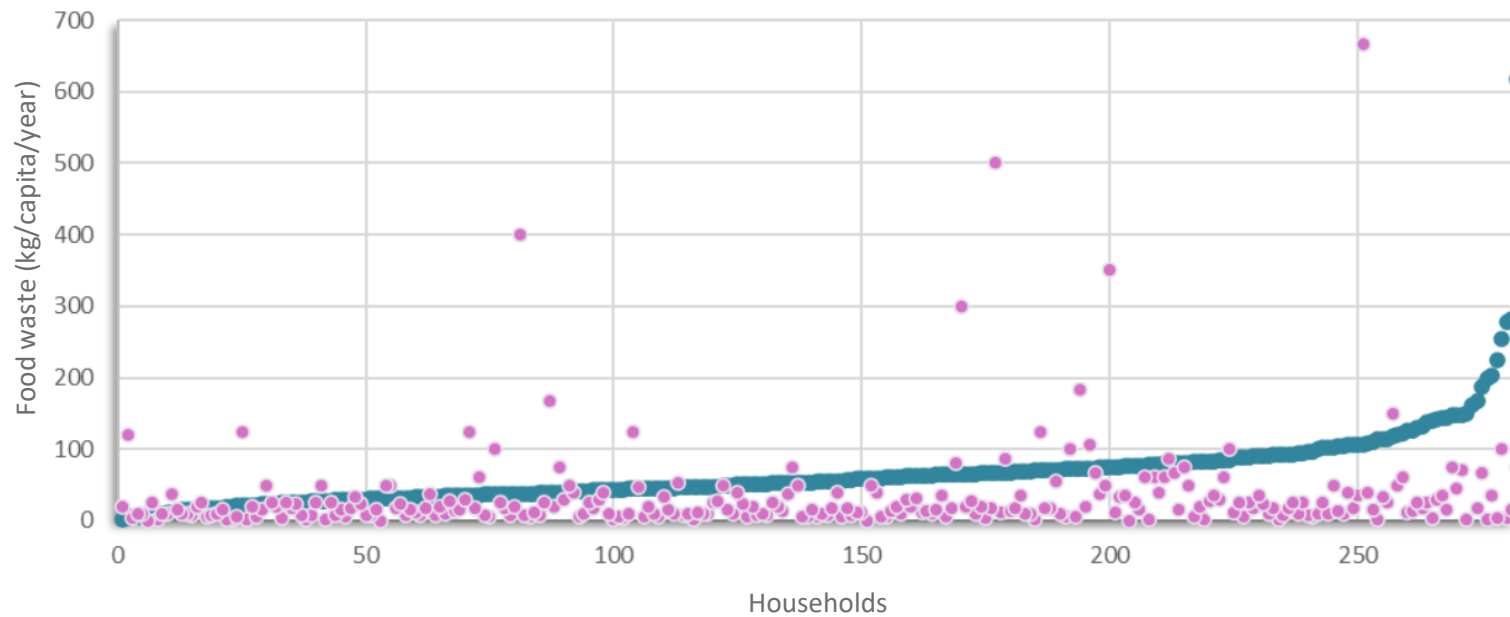

# Household FW trends (2016-2021)

Real wastage (the avoidable fraction) has decreased by **24%** since 2016

# Preliminary estimation by households

Amount of food waste estimated by households is **33.7 kg/capita/year** which corresponds to an average underestimation of **48.5%**.

# Consumer perspectives on FW reduction

*Would your household be capable of cutting food waste levels?*

**More than 3/4 of the households would be able to reduce food waste.**

# Household FW survey 2022

---

- Sample size: 522 households
- Data processing in progress
- Expected release of the results:
  - July 2023 publication of preliminary results
  - End of 2023 scientific publication
  - Possible presentation of the results on EU FLW Platform meeting
- Assessment of the effect of inflation on food waste levels
  - Actual food waste trends
  - Specific questionnaire addressing the impact of the inflation on FW

# SMP-FOOD-2022-FoodWaste-NCA-Hungary

---

- Cooperation with national authorities of Member States responsible for the measurement of food waste and the implementation of food waste prevention programs
- Granting authority: Health and Digital Executive Agency (HaDEA)
- Beneficiary: Food Chain Safety Centre Hungary
- Exploring alternative ways (possibly in-depth methods as set out in (EU) 2019/1597) for the measurement of food waste
- Stakeholder involvement
- National guide development on FW measurement in compliance with (EU) 2019/1597
- Targeted sectors:
  - Households (funding for regular HH survey in 2023)
  - Hospitality and food services
  - Retail
- Results will be published and presented in 2024 in EU FLW Platform meetings and FLW Prevention Hub

**Funded by  
the European Union**

# Lessons learnt

---

- Household FW has still the largest share in total FW
- Sound measurement methods are necessary to support MS reporting exercise
- Monitoring all FW material streams is important for comprehensive evaluation (e.g. animal feed and sewage, even if legally not regarded as waste)
- Dedicated EU funding schemes are highly beneficial for policymakers, researchers and citizens to foster national programmes
- Horizontal EU initiatives, such as ECFWF and Citizens' Panel on Food Waste are extremely valuable
- National programme has been successful – actual wastage decreased by 24% since 2016 in Hungarian households
- Education (especially in young age) should be a key element in national programmes
- Consumers underestimate their food waste levels
- Consumers are capable of reducing FW in the household only to a limited extent
- EU common reduction targets should be rationally defined, in accordance with research findings and evidence from practitioners (i.e. avoidable vs total FW)

# Thank you very much for your attention
