1. Technical implementation of the programme

1.1 Description and evaluation of the evolution of the epidemiological situation, the technical implementation of the activities foreseen under the programme and the cost-effectiveness of the programme.

There were no positive cases found in susceptible population in Latvia during 2019. At the beginning of 2019 (February) the age limit for bovine animals was increased from 24 month to 48. The program can be considered as cost-efficient as tests are focused only to risk category animals.

1.2 Details on the level of achievement of the targets set in the approved programme and technical difficulties.

In general, targets of the program are achieved in a good level. As a result of awareness campaign in 2019, we were able to increase the number of risk bovine and ovine animals subjected to laboratory testing. We still have some difficulties to get notifications from goat owners on animal death in order to take sample for testing to TSE. Information is provided to sheep and goats breeding associations to facilitate notification and improve the sampling system.

1.3 Epidemiological maps for infection and other relevant data on the disease/activities (information on serotypes involved,...) (Please attach files of data using the PDF attachement feature) Use the textbox below to provide clarifications for the maps you attach, if needed.
