CHAPTER 1 INTRODUCTION

Directive 64/432/EEC of 26 June 1964 on animal health problems affecting intra-Community trade in bovine animals and swine¹ provides that a Member State or part of a Member State may be declared officially tuberculosis-free, officially brucellosis-free and officially enzootic-bovine-leukosis-free as regards bovine herds, subject to compliance with certain conditions set out in that Directive.

The lists of regions of Member States declared officially free of bovine tuberculosis, bovine brucellosis and enzootic-bovine-leukosis are set out in Commission Decision 2003/467/EC of 23 June 2003 establishing the official tuberculosis, brucellosis and enzootic-bovine-leukosis-free status of certain Member States and regions of Member States as regards bovine herds².

Article 9 of Directive 64/432/EEC provides that a Member State, which has a compulsory national control programme for one of the contagious diseases listed in Annex E(II) to that Directive, may submit its programme to the Commission for approval. That Article also provides for the definition of the additional guarantees which may be required for trade within the Union.

In addition, Article 10 of Directive 64/432/EEC provides that where a Member State considers that its territory or part thereof is free from one of the diseases listed in Annex E(II) to that Directive, it is to present appropriate supporting documentation to the Commission. That Article also provides for the definition of the additional guarantees which may be required for trade within the Union.

Commission Decision 2004/558/EC of 15 July 2004 implementing Council Directive 64/432/EEC as regards additional guarantees for intra-Community trade in bovine animals relating to infectious bovine rhinotracheitis and the approval of the eradication programmes presented by certain Member States³ approves the programmes for the control and eradication of the infection with the bovine herpesvirus type 1 ('BHV1') presented by the Member States listed in Annex I to that Decision for the regions listed in that Annex, and for which additional guarantees for BHV1 apply in accordance with Article 9 of Directive 64/432/EEC. In addition, Annex II to Decision 2004/558/EC lists the regions of the Member States that are considered free of BHV1 infection and for which additional guarantees apply in accordance with Article 10 of Directive 64/432/EEC.

Commission Decision 2008/185/EC of 21 February 2008 on additional guarantees in intra-Community trade of pigs relating to Aujeszky's disease and criteria to provide information on this disease⁴ contains a list of Member States or regions thereof free of Aujeszky's disease and where vaccination is prohibited in Annex I thereto. Annex II to Decision 2008/185/EC contains a list of Member States or regions thereof where disease control programme for that disease are in place.

The information in Chapter 2 of this Report provides an overview of the status of EU Member States, Norway and Switzerland and regions thereof recognised as officially free from the abovementioned animal diseases at **31/07/2012**.

³ OJ L 249, 23.7.2004, p. 20.

⁴ OJ L 59, 4.3.2008, p. 19.

In accordance with Article 8 of Directive 64/432/EEC, Member States are requested to forward to the Commission, by 31st May each year, details of the occurrence of diseases listed in Annex E(I) to the Directive and of any other diseases covered by the additional guarantees provided for by Union legislation in its territory referred to the year 2011.

On the basis of this Article, Commission Decision 2003/886/EC of 10 December 2003⁵ laid down the format on which this information must be based. Member States should provide the whole required report. However, those Member States which had an approved co-financed programme for a disease (in the reporting period) or those not free of BHV1 infection or without approved programme for the control and eradication of the infection with BHV1 in place do not have to include information on those diseases and on BHV1 infection.

The information in Chapter 3 of this Report presents a summary of the details of the occurrence of diseases listed in Annex E(I) to Directive 64/432/EEC and of any other diseases covered by the additional guarantees provided for by Union legislation and of monitoring or eradication programme (not covered by Decision 2008/940/EC⁶) provided by the Member States for the year 2011.

In addition, within the framework of the Agreement on the European Economic Area⁷ and the Agreement between the European Community and the Swiss Confederation on trade in Agricultural Products⁸ also Norway and Switzerland provide the abovementioned details which are incorporated in this Report.

Additional information:

AT: *3 herds positive for *M. caprae*. Measures applied like in case *M. bovis*.

BE: *All bacteriological positive animals belonged to the tuberculosis breakdown herd of end 2010; **intensive testing by tracing-back and tracing-on in case of an infected herd or follow up testing of infected herd.

BG: *1 herd in Sredets, Burgas region. Follow-up and investigation of all cattle which entered the herd over the past five years were carried out. There are no agents in the herd of origin of animals. Epidemiological studies continue. Burgas region is free from tuberculosis in 1995

CZ: * Single tuberculin test on:

all imported females (except for slaughter) older than 6 weeks of age from third countries.

all removed females (except for slaughter) older than 6 weeks of age and breeding bulls older than 6 weeks of age from Member States which have not the officially TB free status.

all breeding bulls

DE:* 2 herds in Bavaria, 3 herds in Lower Saxony.

DK:* Bulls at semen collection centres are subjects to serological test for bovine brucellosis before entry to the centres and once a year. Furthermore, some bovine animals are tested before export.

ES: 2008/940/EC

FI: * intradermal tuberculin tests were done on bulls standing at the semen collection centres or new bulls introduced to the centres.

FR: *officially free herds (mentioned in the relevant column) include 123 herds suspended on 31/12/2011 and suspension was removed between 1/1/2012 and 1/2/2012; **Moreover the % of officially free herds was superior or equal to 99.9% from July to November 2011, on 1 November 2011 it was 99.9% (232027/232258).

BE: in consequence of a brucellosis breakdown in November 2010, all dairy herds (9,640) were tested by an ELISA of tank milk in 2011. Finally 13 dairy herds had a positive result by analyze of the tank milk and were subsequently analyzed by serology. All serological analyses were negative except for one bovine that had to be test slaughtered. The bacteriological examination of this animal was also negative.

CY: 2008/940/EC

DK: *Bulls at semen collection centres are subjects to serological test for bovine brucellosis before entry to the centres and once a year. Furthermore, some bovine animals are tested before export.

EE: *total number of herds(as in many cases from the same herd both serological and bulk milk samples are taken).

ES (Canary Islands); other regions: 2008/940/EC

FI: *Abortions in cattle are as such not notifiable in Finland, if there is no reason to suspect a notifiable disease. The number indicates the number of abortions, from which samples were submitted to the laboratory on a voluntary basis to clarify the reason for the abortion, and where a *Brucella*-examination was carried out among other examinations.

(1) Programme under the supervision of the competent authority.

(2) Pig holdings where serological tests for AD have been carried out with negative results in accordance with an official AD programme and where vaccination has been applied during the previous 12 months.

(3) Pig holdings which fulfil the conditions of Article 1(c).

(4) By means of clinical, serological, or virological investigations.

AT: By Decision 97/423/EC of 30 June 1997 Austria was granted additional guarantees in accordance with Article 10 of Directive 64/432/EEC. Therefore, since June 1997 Austria has been recognised as an Aujeszky's disease-free Member State. In order to maintain that status a yearly monitoring programme is carried out. Moreover, in Austria vaccination is forbidden. In addition, in 2011, 11,434 pigs in 4,143 herds were tested. No positive result was found. Since 1997 and also in 2011 Austria has been free of Aujeszky's disease.

BE: In total 282,450 sera of pigs in holdings and semen collection centers were analysed for Aujeszky's disease. All results were negative.

CY: In 2011, 993 blood samples were tested from 44 pig holdings. These figures were randomly chosen based on a 5% prevalence among holdings and confidence interval of 95%.

DK: In the serological surveillance 50,251 samples have been tested (slaughter, export, semen collection centres).

FI:

- 1) Annual monitoring from samples collected from slaughterhouse: Total number of samples collected was 1,033, out of which 927 were analysed for Aujeszky's disease and 1,031 for TGE and 1,033 for CSF and PRRS, all with negative results.
- 2) Artificial insemination activities: Total number of samples collected was 1,945, out of which 1424 were analysed for Aujeszky's disease, all with negative results. Samples

were also analysed for other diseases as follows: 1,425 for CSF, 1,125 for TGE, 1,108 for SVD and 1,945 for PRRS, all with negative results.

- 3) Finnish SPF (specific pathogen free) herds: The total number of samples collected was 427,403 samples were analysed for TGE and 427 for PRRS, all with negative results.
- 4) Altogether 2,079 samples in semen collection centres and SPF herds were analysed for *Brucella suis*, all with negative results.
- 5) Wild boars: The total number of samples collected from wild boars was 8. All these samples were analysed for Aujeszky's disease and CSF and 10 for ASF, all with negative results.

FR (départements: Ain, Aisne, Allier, Alpes-de-Haute-Provence, Alpes-Maritimes, Ardèche, Ardennes, Ariège, Aube, Aude, Aveyron, Bas-Rhin, Bouches-du-Rhône, Calvados, Cantal, Charente, Charente-Maritime, Cher, Corrèze, Côte-d'Or, Creuse, Deux-Sèvres, Dordogne, Doubs, Drôme, Essonne, Eure, Eure-et-Loir, Gard, Gers, Gironde, Hautes-Alpes, Hauts -de-Seine, Haute-Garonne, Haute-Loire, Haute-Marne, Hautes-Pyrénées, Haut-Rhin, Haute-Saône, Haute-Savoie, Haute-Vienne, Hérault, Indre, Indre-et-Loire, Isère, Jura, Landes, Loire, Loire-Atlantique, Loir-et-Cher, Loiret, Lot, Lot-et-Garonne, Lozère, Maine-et-Loire, Manche, Marne, Mayenne, Meurthe-et-Moselle, Meuse, Moselle, Nièvre, Oise, Orne, Paris, Pas-de-Calais, Pyrénées-Atlantiques, Pyrénées-Orientales, Puy-de-Dôme, Réunion, Rhône, Sarthe, Saône-et-Loire, Savoie, Seine-et-Marne, Seine-Maritime, Seine-Saint-Denis, Somme, Tarn, Tarn -et-Garonne, Territoire de Belfort, Val-de-Marne, Val-d'Oise, Var, Vaucluse, Vendée, Vienne, Vosges, Yonne, Yvelines).

LU: 171 samples from 11 holdings.

NL: The breeding pig holdings (300) have to test 12 blood samples every month. The other pig holdings (7,667) have to test 3 blood samples every 4 months. In total 135.204 blood samples were taken and serological monitored by a gB-test in 2011. All the pig holdings sampled were negative.

SE: Sweden has been recognised free from Aujeszky's disease by Commission Decision 96/725/EC, does not carry out vaccinating against that disease and has been granted additional guarantees in accordance with Art. 10 of Directive 64/432/EEC (as required and listed in Annex I in Commission Decision 2008/185/EC).

Six clinical suspicions of Aujeszky's disease were investigated (passive surveillance). In most cases other diseases included in the Act of Epizootic Diseases were included in the investigation. Following investigation including sampling, all six herds were declared negative for Aujeszky's disease. Samples originating from pre-testing for export and at breeding centers were all negative for Aujeszky's disease.

2,270 samples originating from 757 herds sampled at slaughter and analysed within the active annual surveillance program. All these samples were negative regarding antibodies to Aujeszky's disease virus.

At our two porcine semen collection centers, a total number of 2,187 samples (1,485 animals) have been investigated. All samples were negative.

SI: The Republic of Slovenia was recognised as an Aujeszky's disease free Member State by Commission Decision 2010/434/EC and included in Annex I to Commission Decision 2008/185/EC.

In the frame of monitoring programme for maintaining Aujeszky's disease free status, 3,834 animals were tested in 768 herds.

Herd based sampling scheme is designed to detect a 1% level of sero-positive herds with 95% confidence (149 pig herds), and detection of within-herd prevalence of 5% with 95% confidence in breeding and mixed herds, combined with risk based components (purchased breeding pigs; pigs with health problems). In addition to this, all boars are tested for Aujeszky's disease as well.

UK (GB): *Data refer to 2010 for England (7,789) and 2011 for Scotland (1,304) and Wales (1,167).

HU: *out of which 782 are large pig holdings and 50,323 are small pig holdings. In Hungary in the reporting period there were 8 porcine semen collection centres where 614 serological tests for Aujeszky's disease have been carried out, in each case with negative results.

IE: *vaccination prohibited on all holdings.

Additional 9,744 Aujeszky's disease tests for other purposes carried out in 2011.

PL: During 2011 on the territory of Poland were 3,071 pig herds with a positive serological result for Aujeszky's disease, including 444 new positive herds. 2,528 herds were eliminated, which gives 543 herds with a positive serological result for Aujeszky's disease at the end of 2011 (401 herds with the last positive result and 142 free herds suspended due to positive result).

Total number of non infected herds on the territory of Poland at the end of 2011 was 298,506 herds, including:

- 1) 272,287 herds complying with the criteria of Article 1(3) of Decision 2008/185/EC,
- 2) 26,219 herds obtained negative results in the last serological tests for Aujeszky's disease carried out within the framework of national programme for eradication of Aujeszky's disease, introduced by Regulation of the Council of Ministers of 19 March 2008 *on introduction of programme for eradication of Aujeszky's disease in pigs* [Dz. U. of 2008, No 64, item 397, as amended].

The remaining herds are: infected herds (401), suspended herds (145) and herds with unknown epizootical status (91,891). Amongst the latter, around 99.5 % were so called "empty herds", i.e. herds qualified for the programme based on central database on animal identification and registration in which no animals were kept at the visit of the official veterinarian.

EE: number of Aujeszky's disease free holdings, which are not officially free of Aujeszky's disease accordance with Article 1(3) of Commission Decision 2008/185/EC and vaccination is prohibited.

Since 1999 every year the Veterinary and Food Board (VFB) establishes the 'State Program for the Control of Animal Infectious Diseases'. The program is enforced with directive of the General Director of the VFB according to §30(2) of the Infectious Animal Disease Control Act.

Samples for detection of Aujeszky's disease are collected in breeding farms by following scheme to detect 20% prevalence of disease with 95% confidence.

No of sows in unit	No of samples collected

All boars in the semen collection centres and used in natural mating are tested for Aujeszky's disease. Additionally, 1% of slaughter pigs are tested for Aujeszky's disease. In 2011 there were 881 blood samples tested serologically and all results were negative.

FR (Guadeloupe, Martinique, Guyana and Corsica)

UK (NI): *includes: 2 holdings which have completed first test towards proving freedom from AD; 8 holdings with unknown status; **239 holdings which had previously vaccinated pigs. The majority of these had ceased vaccination with approximately 20 large commercial holdings continuing until July 2010 when a government and industry agreed administrative cessation of vaccination commenced. A vaccination ban comes into force when new legislation is enacted during March 2012

- GR No outbreaks of Aujeszky's disease reported in 2011.
- LT: Total number of pigs in the country: 518,456 out of which 10,733 breeding pigs were tested for Aujeszky's disease in 2011.
- LV: According to “Animal infectious disease State surveillance plan for 2011” laboratory tests (serology – ELISA) for Aujeszky`s disease are carried out in all semen collection centers on all donor boars once per year. Vaccination is carried out on holdings where positive serological results are found. 15,110 pigs were vaccinated during 2011 in 70 holdings. 12,510 animals in 162 holdings were tested for Aujeszky`s disease during 2011 (mostly in holdings which export live pigs to the Russian Federation).
