ADNS 2020/274

- district Vranov nad Topľou , the area very close to part II area, currently included in part 1
- This area is forestry habitat with naturally /normally “life space “for WB, thus we suppose natural spreading of the virus in the population in that area
- Place of finding: district Vranov, municipality Hermanovce nad Topľou
- GPS: 48.96, 21.50
- Date of confirmation: 04.12.2020 by NRL for ASF Zvolen

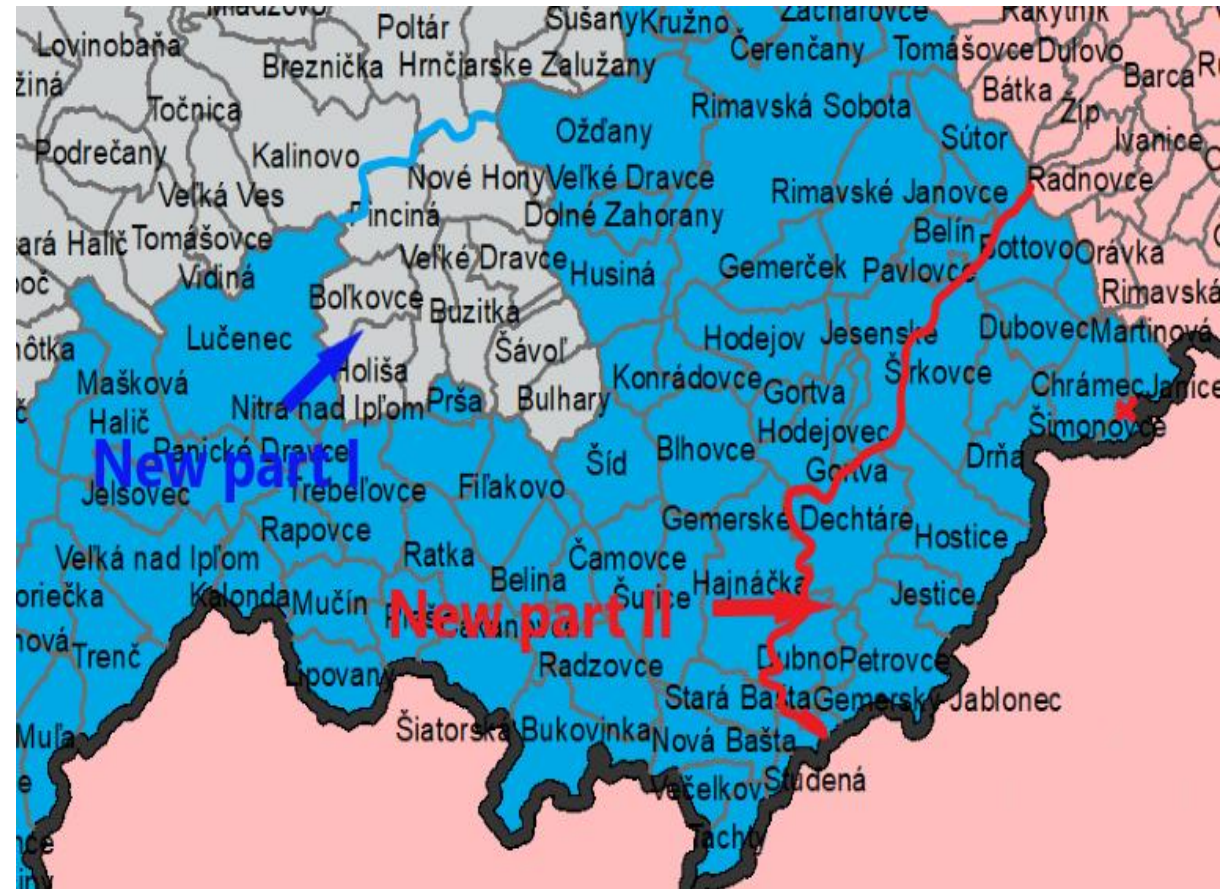

New part II zones

Vranov/Presov – ADNS 2020/274

Rimavská Sobota – ADNS 2020/281

Ongoing activities

- New zoning which mirrors new findings of WBs in current part I proposed/ will be voted at Paff
- New part II - HGs – the adaptation already issued (valid for part II HGs) measures
- New /updated national eradication plan ASF for 2021 – in progress
- Expert group met on 07/12 in Vranov to evaluate the situation and to align further steps amongst infected districts as well as surroundings districts
- In free regions – highlited to provide intensive hunting of WB in order to regulate the density
- Protection /surveillance zones created in relation to ASF in domestic pigs – lifted
- Finlisation the investigations and procedures in order to ask the EC and the MS to change some parts of slovak territory from part III (to revert into part II) - (Non - commercial character of holdings with ASF occurrence in summer 2020 in **Košice – okolie and Rožňava** • More than 3 month period without outbreak • Clustered occurrence • Sufficiently large previously area (never detected ASF before) • Disinfection provided • Examination as prescribed is in a final stage)

Thank you for your attention
