# ASF in Sardinia

- During the last seven years, the number of ASF outbreaks in Sardinia has drastically reduced in all the involved populations (i.e., domestic pigs, wild boar and illegal free-ranging pigs).
- The last PCR+ in domestic pig farms dates to September 2018.
- In 2019 the last PCR+ in free-ranging illegal pigs (February) and in wild boar (April)

# ASF outbreaks (seropositive) in domestic pigs notified in 2022

N. outbreak (SIMAN)	Location code	Specie	Municipality	Data of suspicion	Data of confirmation	Data of extinction	Cases

# Piedmont and Liguria: cases in wild boar at 13/12/2022

Samples in Piedmont Part II: 595

Positives in Piedmont: 131

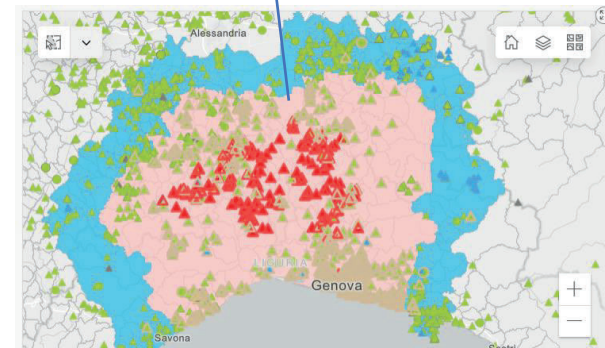

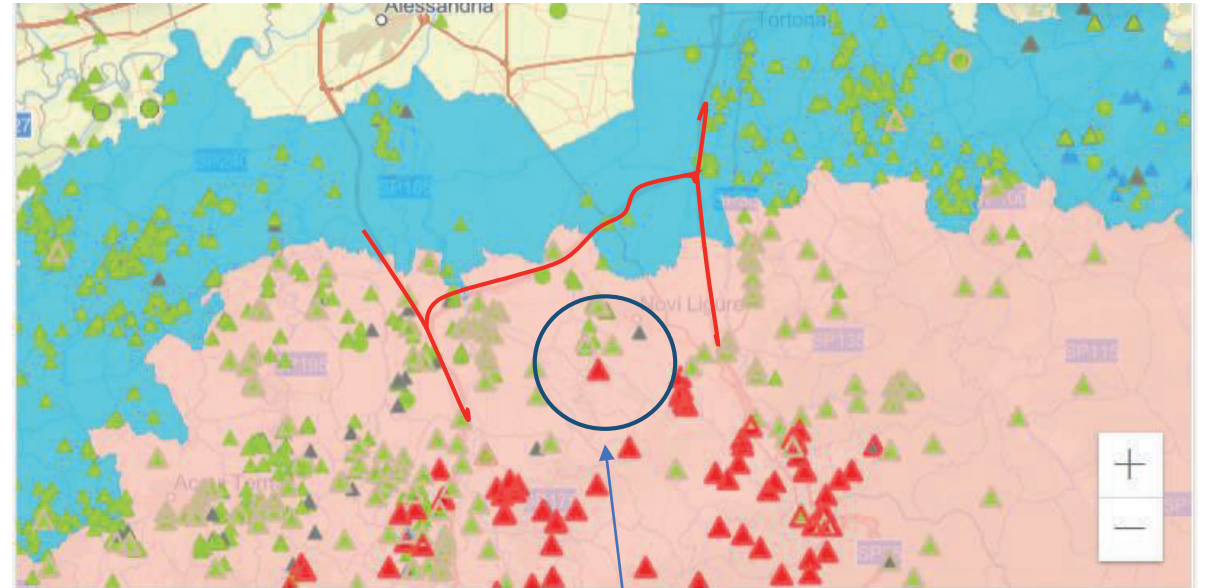

Samples in Liguria Part II: 729

Positives in Liguria: 70

# Piedmont

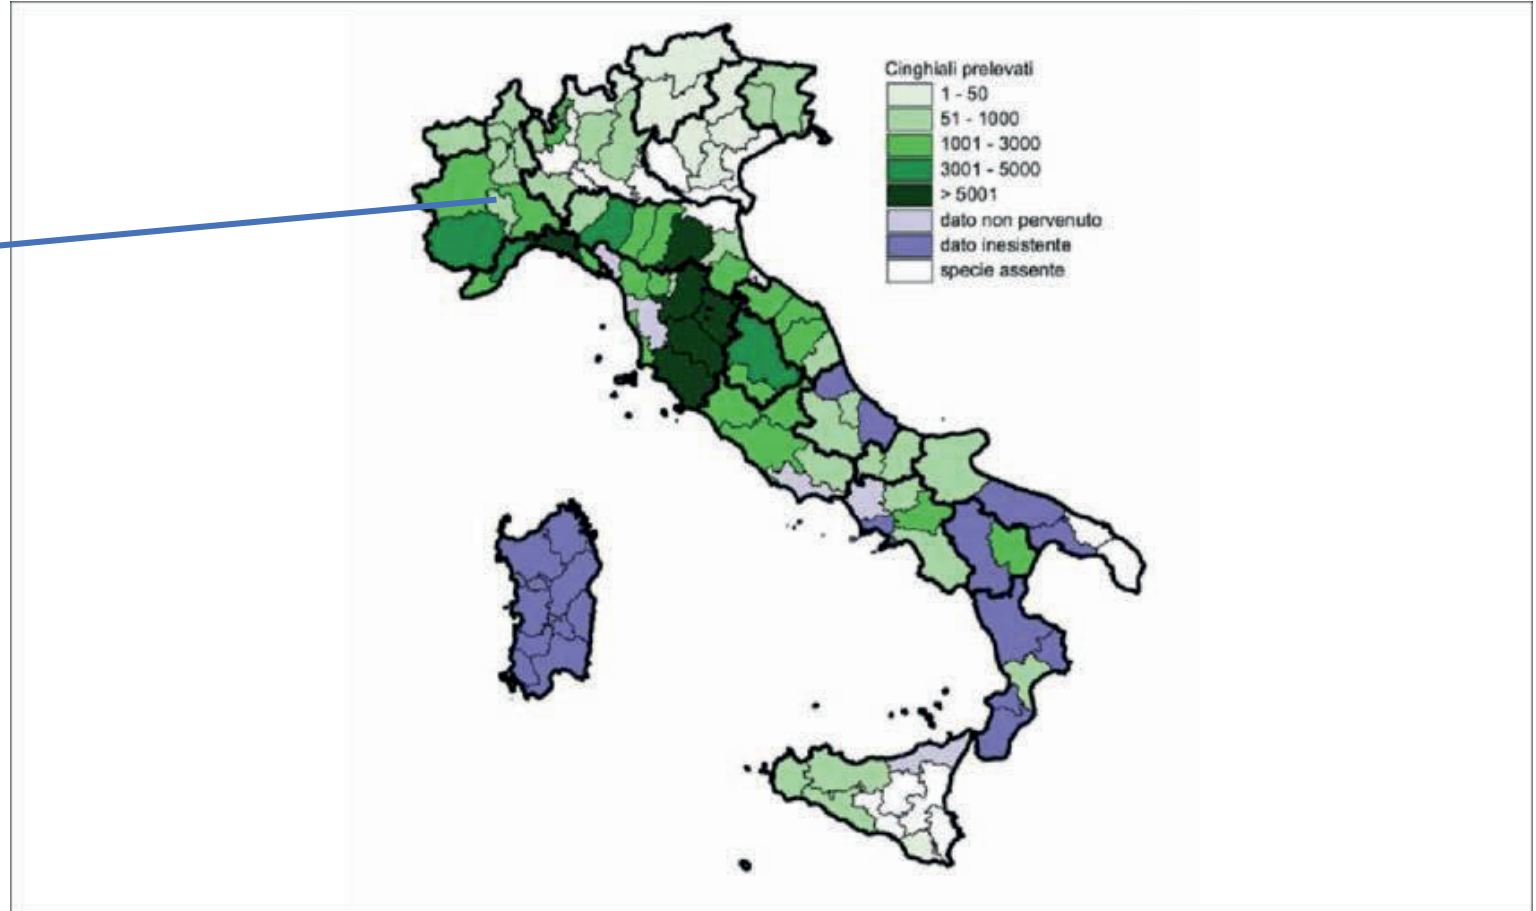

- On the 6 of December was confirmed a positive case in a wild boar in Tassarolo Municipality, Alessandria Province
- The case is within the three Highways, which fences were reinforced in Spring season
- Commercial and backyard farms in Part II are still empty. In part I (Alessandria Municipality) there are 2 holdings with, respectively, 204 and 154 pigs and 4 holdings for not human consumption
- Lower density of wild boars

# Wild boar density in Piedmont

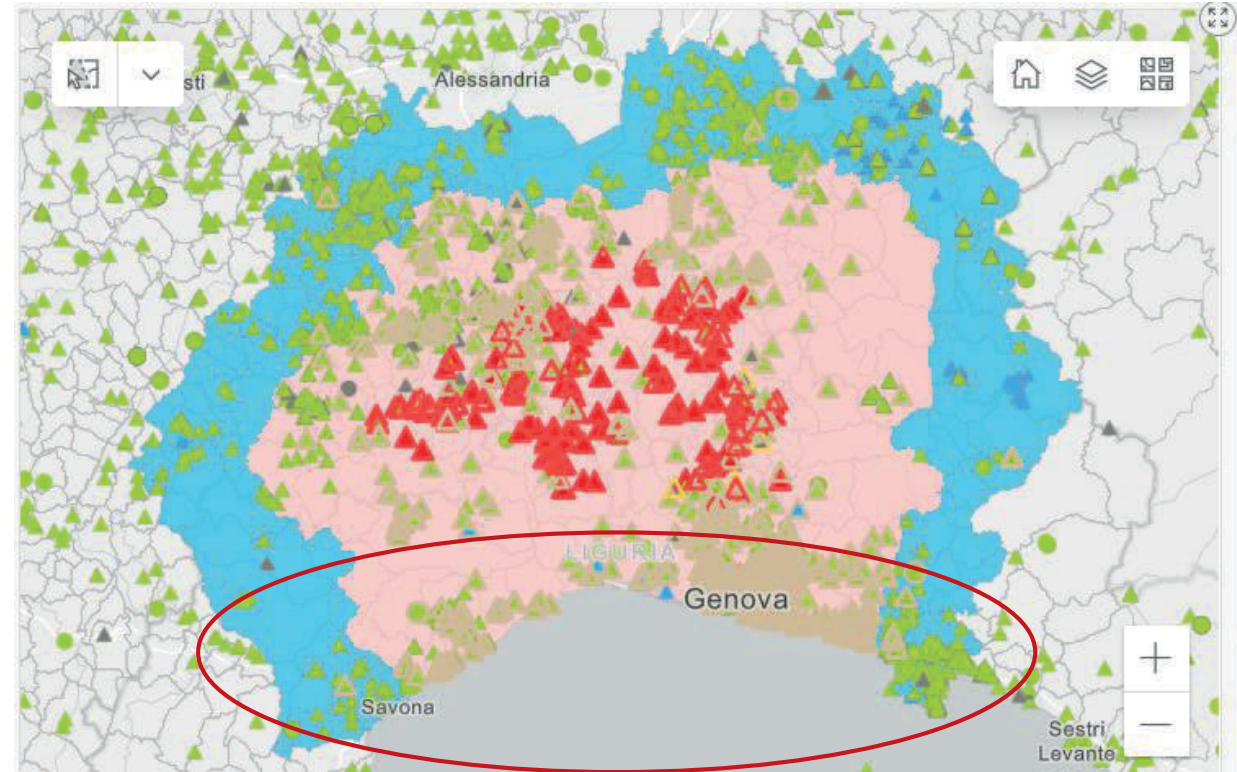

In Alessandria  
Municipality the wild  
boar population is lower

# Liguria

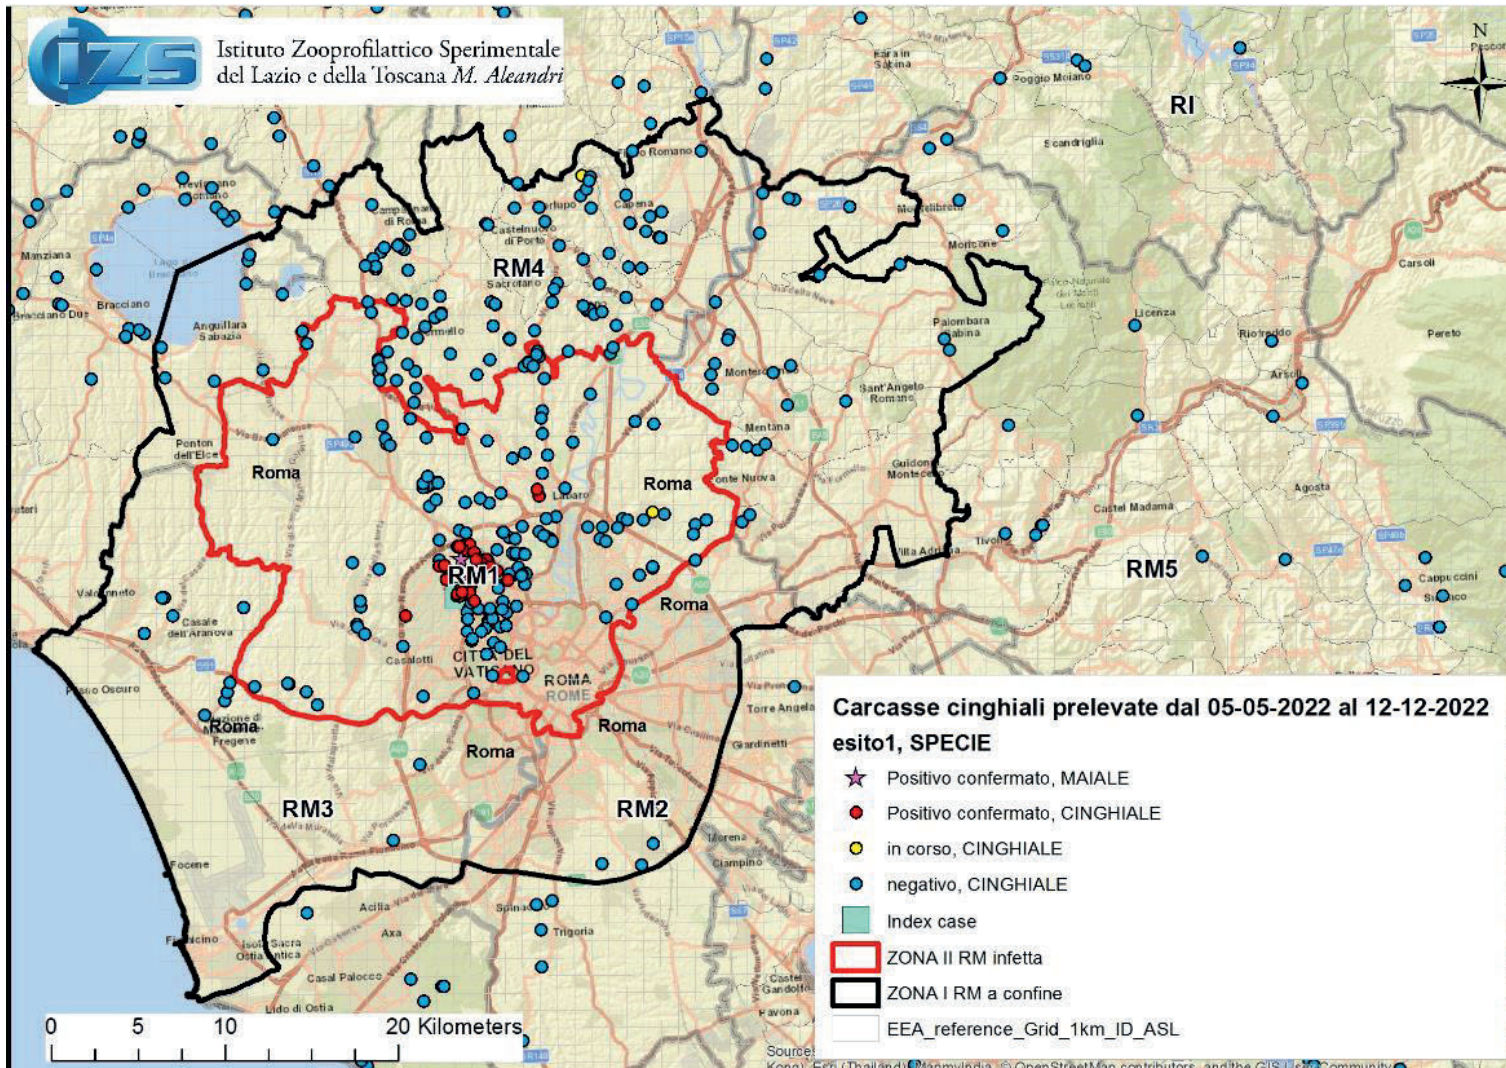

Since the beginning of the epidemic, in Liguria in the Southern area of the restricted zones, the active search of carcasses and the catch with cages are demonstrating the absence of ASF virus

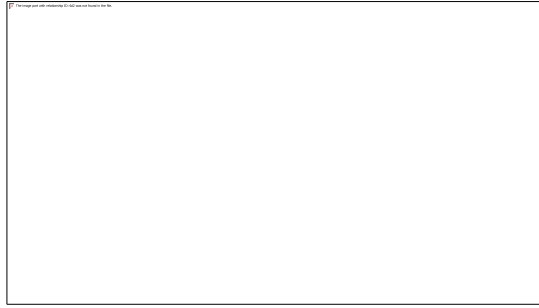

- ▲ Wild boar confirmed
- ▲ Wild boar negative
- ▲ Not examined

# ASF in Rome updated to 12/12/2022

Zona	Samples	Positives	Negatives	Ongoing
Part II	462	48+1 domestic outbreak	413	1
Part I	161	0	158	3

The epidemiological situation in Rome seems stable. No further positive cases since beginning of September

Thanks for your kind attention
