

EUROPEAN COMMISSION
HEALTH & CONSUMERS DIRECTORATE-GENERAL

Unit 04 - Veterinary Control Programmes

SANCO/10242/2009

*Programmes for the eradication, control and monitoring of certain
animal diseases and zoonoses*

Surveillance and Eradication programme of Bluetongue

Approved* for 2010 by Commission Decision 2009/883/EC

Lithuania

* in accordance with Council Decision 2009/470/EC

**LIETUVOS RESPUBLIKOS
VALSTYBINĖ MAISTO IR VETERINARIJOS TARNYBA**

STATE FOOD AND VETERINARY SERVICE REPUBLIC OF LITHUANIA

**APPLICATION FOR COMMUNITY FINANCING FOR VACCINATION AGAINST
BLUETONGUE IN LITHUANIA FOR 2010**

LITHUANIA, 2009

1. Identification of the programme

Member State: Lithuania

Disease: Bluetongue

Request for Community co-financing for: Year 2010

Reference of this document: _____

Contact: Deputy Director V. Paulauskas; phone + 370 5 2404363; fax + 370 5 2404362; E-mail: vyt@vet.lt; vpaulauskas@vet.lt

Date sent to the Commission: 30th of April, 2009

2. Historical data on the epidemiological evolution of the disease(s):

Bluetongue has never been recorded in the Republic of Lithuania.

3. Description of the submitted programme:

The bluetongue vaccination control and surveillance programme is implemented by State Food and Veterinary Service of the Republic of Lithuania.

4. Measures of the submitted programme

4.1. Summary of measures under the programme

Duration of the programme: 2010

First year: 2010

- Control
- Testing
- Slaughter of animals tested positive
- Killing of animals tested positive
- Vaccination
- Treatment
- Disposal of products
- Eradication, control or monitoring.

Last year: 2010

- Eradication
- Testing
- Slaughter of animals tested positive
- Killing of animals tested positive
- Extended slaughter or killing
- Disposal of products
- Other measures (*specify*):

4.2. Description and demarcation of the geographical and administrative areas in which the programme is to be implemented:

Bluetongue vaccination programme will be implemented in whole territory of the Republic of Lithuania. Vaccination will be launched when there is an outbreak in the territory of Lithuania or in close proximity to it.

4.3. Designation of the central authority charged with supervising and coordinating the department responsible for implementing the programme:

The authority responsible for the co-ordination of control and surveillance of bluetongue in the entire country, is the State Food and Veterinary Service of the Republic of the Lithuania

The Animal Health and Welfare Department is responsible for the co-ordination and control of country and district State Food and Veterinary Services involved in the implementation of this programme. This department collects the data, performs statistical analysis and evaluation of the surveillance programme and informs the relevant authorities in European Union about the progress of the control and surveillance programme.

4.4. Description of the measures of the programme:

4.4.1. Measures and terms of legislation as regards the notification of the disease

According The Law on Veterinary Activities No I-2110 (of 17 December 1991), with amendments by the Law No VIII-1350 (of 7 October 1999) and by the Law No VIII-1793 (of 4 July 2000) and Order of the Director of State Food and Veterinary Service On Regulation

on the notification of animal diseases in the Republic of Lithuania, the animal keeper or private veterinarian or anybody who suspects infectious animal disease shall report without delay to the official veterinary service every suspected case. On receiving a report of the presence or suspected presence of animal disease, on a livestock holding or in any other place, the official veterinarian in whose area the holding is located must immediately start the investigation to confirm or rule out the presence of the disease and to place the suspect holding under surveillance.

4.4.2. Target animals and animal population:

The vaccination of bovine, sheep and goats are foreseen.

4.4.3. Identification of animals and registration of holdings

The Order of the Director of the State Food and Veterinary Service (13 February 2003 No B1-1143) lays down the requirements for animal holding control according to Regulation (EC) 1760/2000.

The identification of animals is done in accordance with Commission Regulation (EC) No 2629/97 of 29 December 1997 laying down detailed rules for the implementation of Council Regulation (EC) No 820/97 as regards eartags, holding registers and passports in the framework of the system for the identification and registration of bovine animals, Regulation (EC) No 1760/2000 of the European Parliament and of the Council of 17 July 2000 establishing a system for the identification and registration of bovine animals and regarding the labelling of beef and beef products and repealing Council Regulation (EC) No 820/97 and Commission Regulation (EC) No 911/2004 of 29 April 2004 implementing Regulation (EC) No 1760/2000 of the European Parliament and of the Council as regards eartags, passports and holding registers.

The Order of the Ministry of Agriculture was adopted (16 June 2003 No. 3D-234) and the SFVS was nominated as the competent institution responsible for the implementation of animal identification and registration system in the Republic of Lithuania.

The control of identification and registration of animals is carried out in accordance with the Order No. B1-6 of the Director of State Food and Veterinary Service on the veterinary control of identification and registration of animals of 5 January 2007.

4.4.4. Vaccines used and vaccination schemes:

The vaccines creating immunity against BTV8 virus will be used.

The SFVS in consultation with epidemiologists from the Expert Group will prepare the plan with information about:

- the disease situation which has given rise to such a proposal;
- the factors that strengthen the case for vaccination to be authorized;
- the size of the area in which it is proposed to carry out vaccination, which will be decided after consultation between the SFVS epidemiologists from the Expert Group and Local SFVS with detailed local knowledge of the area at risk from further spread of the disease;

- the number and categories of animals that would be vaccinated;
- the vaccine that would be used;
- the duration of the vaccination campaign;
- the system to be used to identify and register vaccinated animals;
- the measures that would be taken to control the movement of animals and animal products.

4.4.5. Operation of the Vaccination Campaign

A vaccination team will consist of a veterinarian and a lay technical assistant. Each team will be supplied daily with the following materials and equipment:

- adequate vaccine to complete the days work;
 - 2 automatic multidose syringes with spare parts, belt and holster;
 - a small steriliser for the multidose syringes;
 - disposable syringes and needles;
 - containers for used disposable syringes and needles, empty vaccine
 - bottles and other waste;
- animal catching equipments;
- a supply of all the necessary forms.

Administrative staff will make appointments for the vaccination teams and, in doing so, will ask for adequate help to be available during vaccination to restrain animals and to doing so, will ask adequate help to be available during vaccination to restrain animals and to provide other necessary assistance and will obtain details of the current animals population on the holding. Only exceptionally will vaccination visits be made without prior arrangement.

Each vaccination team will be given a duty sheet at the start of each working day, listing the holdings to be visited, the times of the visits and the approximated numbers of animals on each holding.

On arrival at a holding on which animals are to be vaccinated the veterinarian will explain the Vaccination Campaign to the owner or person in charge.

The members of the vaccination team will put on their protective clothing and carry out thorough personal disinfection before going near the part of the holding in which animals are housed.

In carrying out the vaccinations the manufacturers instruction will be strictly adhered to, with particular regard to the dosage rate, the optimal injection sites and the exclusion of animals under a certain age.

Each animal vaccinated, regardless of age, will be identified by a unique, ear tag. A record will be kept on pro forma of the number of animals vaccinated in each category of the serial numbers used.

Before leaving the holding, a holding vaccination record form will be completed in duplicate, the signature of the owner or person in charge obtained and a copy left on the holding.

At the end of the day's duties the vaccination team will return to the Vaccination Section where used disposable equipment and other waste will be put safely in a container for that purpose, other equipment which may have been contaminated will be sterilized after cleaning and disinfection, and the relevant forms will be completed and returned to the administrative staff. The Emergency Vaccination Campaign map will be updated daily to indicate progress.

4.4.6. Monitoring measures

Active sero-surveillance

Where deemed appropriate, such a regime would be defined following risk assessment, resources available and cost benefit analysis. Where required it would target large herds (mainly cattle) following a period of heightened risk. This would allow development of specific antibodies. In addition other targeted surveillance may be undertaken, e.g. bulk milk testing.

Clinical surveillance

Early signs of disease may be mild and difficult to differentiate from other diseases so clinical surveillance may be of limited value. Therefore, no increased clinical surveillance recommended, apart from raising stakeholder awareness of disease signs.

Vector Control

No vector control methods would be recommended, as the Lithuania is disease free at this stage.

4.4.7. Measures and terms of legislation as regards the measures in case of the positive results.

In case of positive results the measures foreseen in Council Directive 2000/75/EC will be applied.

4.4.8. Measures and terms of legislation as regards the compensation for owners slaughtered and killed animals

Compensation procedure is foreseen in the Resolution of the Government of the Republic of Lithuania No.1220 of 16 October 2001 on the compensation of losses and expenses incurred by the contagious diseases of animals, eradication of their focuses (Official Gazette, No, 89-3129, 2001) and Order of the Minister of Agriculture issued on 2 December 2008 No 3D-646 "Approval of Rules of Evaluation and Compensation of Losses in Case of Emergency".

Development of a list of contagious animal diseases upon the occurrence of which livestock and other animals must be subjected to emergency slaughter or destruction, products and raw materials of animal origin must be decontaminated or destroyed and the losses incurred to the owners must be compensated and the expenses of the eradication of the disease focus must be covered, is foreseen. At present not all costs are covered if animals are not insured on private initiative.

Before slaughtering a committee will evaluate a live animal's and propose the amount of compensation. The committee is constituted of a Veterinarian of District State Food and Veterinary Service, an Officer of the District Agriculture Service and a representative of farmers.

After evaluation of losses the report of the committee must be sent to the Ministry of Agriculture. The Ministry of Agriculture prepares the report to the Lithuanian Government. The Lithuanian Government, taking into account report of the Ministry of the Agriculture, will issue Resolution "On losses compensation to the farmer", and the compensation is paid from the Government reserve fund for emergencies.

The Ministry of Agriculture defines the amount of compensation that cannot be greater than the market price of the animal, and it depends on the breed and the degree of genetic value of the animal. The compensation for the animals which will be slaughtered in the framework of animal diseases control programme must be paid to the owner within 90 days after the slaughter of the animals.

4.4.9. Control on the implementation of the programme and reporting:

The veterinarian in charge of the Section or his administrative counterpart will report daily to the local SFVS on progress with the campaign in the preceding 24 hours.

The Animal Health and Welfare Department is responsible for the co-ordination and control of country and district State Food and Veterinary Services involved in the implementation of this programme.

5. BENEFITS OF THE PROGRAMME

Vaccination is regarded as one of the most effective ways of controlling and eventually eradicating bluetongue disease in affected areas. It reduces clinical signs in affected animals resulting in lower mortality and reduced economical losses, and it prevents the spread of the disease amongst livestock.

6. Targets

6.3. Targets on vaccination or treatment (one table for each year of implementation)

6.3.1. Targets on vaccination or treatment¹

Disease^(a): Bluetongue **Animal species: Cattle, sheep, goats**

Region ^(b)	Total number of herds ^(c) in vaccination or treatment programme	Total number of animals in vaccination or treatment programme	Targets on vaccination or treatment programme					
			Number of herds ^(c) in vaccination or treatment programme	Number of herds ^(c) expected to be vaccinated or treated	Number of animals expected to be vaccinated or treated	Number of doses of vaccine or treatment expected to be administered	Number of adults ^(d) expected to be vaccinated	Number of young ^(d) animals expected to be vaccinated
Lithuania	163000	600000	163000	163000	600000	1 200 000	400000	200000
Total	163000	600000	163000	163000	600000	1 200 000	400000	200000

(a) Disease and species if necessary

(b) Region as defined in the approved eradication programme of the Member State

(c) Herds or flocks or holdings as appropriate

¹ Data to provide only if appropriate.

(d) Only for Bovine brucellosis and Ovine, Caprine brucellosis (*B. melitensis*) as defined in the programme

7. Detailed analysis of the cost of the programme (one table per year of implementation)

<u>Costs related to</u>	<u>Specification</u>	<u>Number of units</u>	<u>Unitary cost in €</u>	<u>Total amount in €</u>	<u>Community funding requested (yes/no)</u>
<u>1. Testing</u>					
<u>1.1. Cost of the analysis</u>	<u>Test:</u>				
<u>1.2. Cost of sampling</u>					
<u>1.3. Other costs</u>
