

EUROPEAN COMMISSION  
HEALTH & CONSUMERS DIRECTORATE-GENERAL  
Unit 04 - Veterinary Control Programmes

SANCO/3855/2008

*Programmes for the eradication, control and monitoring of certain  
animal diseases and zoonoses*

## **Eradication programme of Classical Swine Fever**

**Approved\* for 2009 by Commission Decision 2008/897/EC**

**Romania**

\* in accordance with Commission Decision 90/424/EEC

**Programme for the Eradication, Monitoring and Control of  
Classical Swine Fever in Romania  
2009**

**Table of Contents**

1. Identification of the programme
2. Historical data on the epidemiological evolution of classical swine fever
3. Description of the programme
4. Measures of the programme
5. General description of costs and benefits
6. Epidemiological evolution during the last five years
7. Targets
8. Detailed analysis of the costs

## **1. Identification of the programme**

*Member state:* **Romania**

*Disease :* **Classical Swine Fever (CSF)**

*Year of implementation:* **2009**

*The reference of this document:* **NSVFSA – The National Sanitary Veterinary  
and Food Safety Authority  
No. 2666/29.04.2008  
DVM Radu Chetan Roatis, CVO NSVFSA**

*Contact:* **Dr. Niculae Lazăr  
Phone: 40213157875  
Fax: 40213124967  
E-mail: office@ansv.ro**

*Date of submission to the Commission:* **30.04.2008**

*Date of submission of amended version:* **21.08.2008**

## **2. Historical data on the epidemiological evolution of classical swine fever**

### **2.1 Overview of the domestic pig and wild boar population in Romania**

According to the official statistics from April 2008, Romania has 4.2 millions of pigs of which 33% (1.4 millions) are kept in 175 commercial industrial holdings, comparable to the industrialized pig production systems in other Member States. The remaining 2.8 millions of pigs are kept mostly for self consumption in 1.4 millions non-professional so called back yard holdings in the villages. In some parts of the country, e.g. in the Danube Delta, about 10.000 pigs are still kept outdoor on the communal lands. More detailed information regarding the pigs in non-professional holdings are given in the tables in the ANNEX.

The backyard pigs are traded on local markets and are usually slaughtered in December around Christmas time as part of the Romanian tradition. Traditionally home slaughtering is performed. The meat and bacon of these pigs represent an important source of food for the families.

The wild boar population in Romania is subject to considerable fluctuations. It is estimated that about 55.000 wild boar are living in 2,161 hunting funds. Based on this figures the wild boar density is below 1 animal per km<sup>2</sup>. During the hunting season 2007/2008 a total of 10.089 wild boar were shot. 25% were younger than 1 year, 31% were 1 to 2 years old and 44% were older than 2 years. The planed hunting bag for 2009 consists of 19.000 animals. More detailed information regarding wild boar are given in the tables in the ANNEX.

### **2.2 Overview of the epidemiological evolution of CSF in domestic pigs**

Between 2001 and 2007 CSF was detected mainly in the non-professional pig holdings and CSF was considered to be endemic on the whole territory of Romania during several years. A historical overview on the CSF outbreaks of the last 8 years is given in **Table 1**. The CSF situation in the past is closely linked to the former vaccination strategy. Until 2001, when the first CSF outbreaks were notified, compulsory vaccination with a live attenuated vaccine was carried out in the entire country. The vaccination was gradually forbidden until 2003. However, exceptions were made for some large commercial holdings until 2005. In this context, CSF spread endemically in the non-professional back yard holdings which were not protected anymore by vaccination. The main risk factors were and partially still are the huge number of non-professional pig holdings with a relative low standard of biosecurity, the

practice of swill feeding in the non-professional holdings and the unclear disease situation in wild boar.

During 2007 a total of 168 outbreaks were notified in 20 out of 42 counties (**Figure 1**). The last outbreak was recorded on 9 October 2007. The vast majority of cases (165 outbreaks) occurred in the southern parts of Romania in small back yard holdings including one outbreak in free ranging pigs in a natural resort in the Braila county. However, three outbreaks occurred also in large commercial farms in the western part of Romania in August 2007 and more than 50.000 pigs were affected. **No outbreaks of CSF have been notified so far in 2008.**

**Figure 1:** CSF situation in domestic pigs in Romania during 2007.  
Blue dots: non-professional holdings affected by CSF;  
Red dots: commercial holdings affected by CSF;  
Small blue dots: commercial holdings in Romania

### **2.3 CSF situation in wild boar**

In the past, until 2005, wild boar were orally vaccinated in the majority of the Romanian counties by using chicken eggs containing C strain virus (live attenuated CSF vaccine virus). Theoretically for each wild boar one egg-bait was distributed. Vaccination was performed only during winter time when the earth was covered by snow. However, no serological monitoring programmes did exist that time nor other data were available to prove the efficacy and potency of that vaccination protocols.

2005: CSF Virus was confirmed in 43 cases from 5.826 sample examined;

Caras-Severin – 25 cases; Salaj - 13 cases; Alba - 2 cases, Mehedinti, Mures si Neamt – one cases.

2006: Virus was confirmed in 18 cases from 7.780 sample examined

Giurgiu - 6 cases, Salaj – 3 cases, Caras-Severin, Dolj si Tulcea – 2 cases. Bacau, Braila si Olt one cases

2007: Virus was confirmed in 25 cases from 8978 sample examined:

Giurgiu 16 cases, Gorj – 6 cases, Galati- 2 cases, Salaj -1 cases

14 cases from 25 cases confirmed it were animals < 1 year.

2008: In the first half of the year were examined 3,583 virological samples and the virus was not identified in any of the evidence.

From 623 animals < 1 year were identified antibodies against CSF for 12 animals.

A molecular epidemiological survey conducted with 84 CSF virus strains isolated during 2006 and 2007 from all parts of Romania shown that all isolates belonged to the genotype 2.3 (*Rostock*). From these data it can be concluded that most probably only one virus genotype is circulating in Romania so far.

The epidemiological situation presented led to the conclusion that the CSF virus circulates in certain parts of Romania. Due to low density of wildboars and the fact that sick animals become easily catching / prey for carnivore and omnivorous, clinical cases are difficult to detect. Confirmation of the periodical virus as well as varied picture of the results of serological tests laboratory demonstrates this disease in herds of wildboars in Romania.

## 2.4 Eradication and control measures

The approved plans by the Commission to control and eradicate CSF in Romania in 2007 and 2008 were:

- a plan for the eradication of classical swine fever in the feral pigs;
- a plan for the emergency vaccination against classical swine fever of the feral pigs;
- an emergency vaccination plan for the vaccination of pigs with a marker vaccine in big commercial holdings;
- an emergency vaccination plan for the vaccination of pigs with a live attenuated conventional vaccine in non-professional holdings.

The marker vaccine against CSF is manufactured by Intervet company, which is the only producer worldwide. At the beginning of 2008 Intervet informed Romania that potency and stability problems of the vaccine were detected and therefore it has to recall some vaccine batches as a precautionary measure. **For this reason, Romania had to revise the implementation of the vaccination campaign in commercial farms and submitted in June 2008 an amended plan taking into consideration the restricted availability of the marker vaccine. In principle, for 2008, based on risk assessments, the authorities are in favour of allowing vaccination with the marker vaccine in some large commercial farms, affected by CSF in 2007, if additional biosecurity and veterinary-sanitary measures are followed.**

The emergency vaccination with the conventional live attenuated vaccine that has been carried out during the last two years has had a very favourable influence on the CSF situation. The monthly incidence of outbreaks in small back yard holdings has decreased gradually and so far no new outbreaks were recorded in 2008.

More detailed information on the epidemiological evolution of CSF in Romania is presented in Chapter 6 "*Data on the epidemiological evolution during the last five years*":

**Table 1:** Overview of the CSF situation in Romania during 2001- 2008 (15.04.2008)

	2001	2002	2003	2004	2005	2006	2007* <sup>1</sup>		2008*
							Non-prof.	Commercial farms	
CSF outbreaks in domestic pigs	1	45	155	180	1508	803	165	3	0
Dead pigs due to CSF	13	452	1021	634	2982	1903	507	11.030	0
Destroyed pigs due to CSF	0	985	3592	1624	8045	5898	4.002	42.659	0
Total number of affected pigs	13	1437	4613	2258	11027	7801	4.509	53.689	0

\* vaccination against CSF in domestic pigs

1) Last outbreak notified on 9 October 2007

### 3. Description of the programme

The programme will be carried out on the whole territory of Romania and takes into account that:

- Council Directive 2001/89/EC and Commission Decision 2002/106/EC contain the main legislative provisions for the application of control and eradication measures;
- CSF should be considered as a continuous threat for the domestic pig population in commercial farms as well as in non-professional holdings;
- several parts of Romania have an infected feral pig population (mainly wild boar);
- the existence of different epidemiological situations and biosecurity conditions in commercial farms and non-professional holdings;
- the limited availability of CSF marker vaccine for vaccinating pigs in large commercial farms.

#### 3.1. Main Objectives

The objectives of the programme include:

- a comprehensive monitoring of pigs (domestic) and feral pigs (mainly wild boars) for CSF

- vaccination of pigs in non-professional holdings with a live attenuated CSF vaccine
- oral vaccination of feral pigs (mainly wild boar) with a live attenuated CSF bait vaccine
- rapid and effective application of control and eradication measures
- general increase of biosecurity in all pig holdings
- an adequate recording of epidemiological data, application of disease control and eradication measures and financial aspects of the programme
- to change the epidemiological status of Romania from a country regarded to be endemically infected with CSF virus to a country free of the disease
- to start a new policy of non vaccination in domestic pigs, starting with commercial industrial holdings
- access to the Community market with fresh meat, meat preparations and meat products of pork origin

During the implementation of the programme, the competent authority will pay due attention to:

1. the results of the epidemiological investigations carried out with regard to transmission of CSF and the geographical distribution of the disease,
2. the presence of three different systems of pig keeping: (a) pigs in commercial farms, (b) pigs in non-professional holdings kept in back yards (c) pigs kept temporarily or permanently outdoor
3. the availability of the different types of CSF vaccines foreseen within the programmes
4. the presence of a wild boar population
5. the existence of major natural or artificial obstacles to movements of feral pigs (mainly wild boars).

### **3.2. Main measures**

All measures conducted in suspect and infected holdings will be according the legislation (Council Directive 2001/89/EC and Commission Decision 2002/106/EC) as layed down in the national contingency plan. The detection of CSF in pigs will result in culling of pigs on the infected holding and of pigs on contact holdings. However, due to the different pig breeding systems in Romania, also particular measures shall be applied for each system.

**a) *Measures in non-professional holdings***

This system includes the holdings where pigs are reared for own consumption. Live pigs can be traded only within the same locality on the local market only between holders of the same type of holdings. The pigs are slaughtered only within the holding and the meat, the meat products and by-products can not be traded.

An integral part of the measures is the CSF vaccination of all pigs with live attenuated vaccine. In principle all pigs from the non-professional holdings will be vaccinated parenterally.

The the free ranging pigs (temporarily free) will be individually identified with cartags, registered in the database and vaccinated in springtime, before leaving backyards. A second vaccination will be applied after 6 month, in during autumn, after they will coming back in holdings, as for domestic pigs kept permanently in non professional holdings.

The eradication measures for these pigs will be the same as for domestic pigs in non-professional system.

***b) Measures in the commercial industrial farms***

This system includes 175 holdings, distributed all over Romania, with high standards of hygiene and biosecurity rules, comparable with pig farms in other Member States. Live pigs, meat products and by-products originating from this system will be traded only on the national market. These holdings are authorized and registered and are under official sanitary veterinary surveillance.

The main measures on the commercial farms will be the further increase of hygiene and biosecurity combined with regular veterinary checks including clinical examinations and laboratory testings for CSF according to the Diagnostic manual for CSF (Commission Decision 2002/106/EC).

During 2007 and 2008 (April) all pigs in the commercial farms were vaccinated with the E2 subunit marker vaccine against CSF. However, due to shortcomings of vaccine delivery by the pharmaceutical company an alternative vaccination plan had to be designed for 2009. So far, Romania decided to stop the vaccination of domestic pigs in the commercial industrial holdings.

***c) Measures in wildboars populations***

An integral part of the control programme is the emergency oral vaccination of feral pigs (wild boar). The plan is designed to vaccinate the entire wild boar population in Romania which is about 55.000 animals. The vaccination plan is linked to an intensive monitoring programme. Samples shall be collected of shot and wild boar found dead and examined serologically and virologically for CSF.

## **4. Measures of the submitted programme**

### ***4.1. Summary of measures under the programme***

Duration of the programme: The programme which started in 2007 will last three years until 2009. After the end of the programme, it is planned to stop the vaccination of the domestic pig population and to shift to a non-vaccination policy as in the other Member States. However, the pillars of the measures within this programme will be regular testings of domestic pigs in both systems according to the Diagnostic manual for CSF (Commission Decision 2002/106/EC) and the vaccination against CSF as described previously. Pigs in holdings found to be infected with CSF virus will be culled and all measures laid down in Council Directive 2001/89/EC will be applied.

## Target population

- 1.400.000 non-professional holdings with 2.800.000 pigs
- About 10.000 free ranging pigs (e.g. in Danube delta)
- 175 commercial farms with 1.400.000 pigs (overall number of pigs kept during the year: 5.200.000)
- About 55.000 wild boar in 2100 hunting grounds

First year: 2007

Last year: 2009

Control: YES

Eradication: YES

Testing (YES)  
Slaughter of positive animals  
Killing of positive animals (YES)  
Vaccination (YES)  
Treatment  
Disposal of products

Testing (YES)  
Slaughter of positive  
Killing of positive animals (YES)  
Extended slaughter or killing  
Disposal of products  
Vaccinations (Yes)

Monitoring or surveillance: (YES)

Other measures (specify):

### *4.2. Designation of the central authority charged with supervising and coordinating the departments implementing the programme*

**The National Sanitary Veterinary and Food Safety Authority (NSVFSA)** is the central veterinary authority of Romania and is responsible for the coordination and supervision of implementing the programme.

At the county level, the departments responsible for the implementing of the programme are the **42 County Sanitary Veterinary and Food Safety Directorates (CSVFSA)**.

According to the provisions of Law no. 1 of January, 8, 2008 for modifying and completion of Ordinance no. 42/2004 for the organization of sanitary veterinary and food safety activities, the Committee for emergency situations shall be set up and operate at the level of Authority, under the rule of its President.

Within the National Committee for Emergency Situations, **The National Centre of Disease Control** shall be set up, by Government Decision, under the direct rule of the Minister of

Interior and Administrative Reform and under the coordination of the Prime-Minister. The National Centre of Disease Control is an inter-ministerial body composed of staff with decisive powers, experts and specialists with complex tasks in managing emergency situations appointed by the ministers. It is structured as follows:

- A) The Central Unit of Decisions, led by the Minister of Interior and Administrative Reform, composed of the members of the National Committee for Emergency Situations
- B) The Central Operational Unit, led by the President of The National Sanitary Veterinary and Food Safety Authority
- C) The Central Unit of Support, composed of experts and specialists within the Central public administration, within its specialists bodies and some institutions and establishments under their subordination, as well as of representatives of other parties (stake holders) interested in eradication of epizooties, assisting The Central Operational Unit in taking the necessary measures for disease control.

There are 42 Local Centers of Disease Control at the level of the counties (prefectures). The structure is similar as on central level comprising also a local group of experts. Periodical meetings are held in order to assess the epidemiological situation of CSF and to take decisions when necessary. The contingency plan shall comprise the contact details of these persons.

#### **Animal Health and Diagnosis Institute**

- a) it establishes the strategy of County and Bucharest Municipality Sanitary Veterinary and Food Safety Laboratories regarding the diagnosis of classical swine fever.
- b) it coordinates the activity of laboratory diagnosis of classical swine fever.
- c) it makes up epidemiological reports, based on the interpretation of the results regarding classical swine fever .
- d) it cooperates with The Laboratory of Community Reference for classical swine fever.

#### **The Institute for the Control of Biological Products and Medicine of Veterinary Use**

- a) it authorizes medical immunological products against classical swine fever that are to be traded in Romania
- b) it carries out the control of series of vaccine quality against classical swine fever, in conformity with the provisions of Surveillance, prevention and control actions of animal diseases, of those transmissible from animals to people, animal and environment protection, approved by The NSVFSA 'President 'Order .
- c) it provides information regarding the medical immunological products against classical swine fever, authorized in Romania.

### **The Ministry of Agriculture and Rural Development**

- a) it assures the necessary amount of money for granting compensations for the swine owners, within the deadlines settles by the European legislation, within the budget limit allotted.
- b)it initiates the necessary measures for granting funds, in order to cover the necessities in emergency cases and the expenses related to the slaughtering of swine, elimination and processing of corpses, carcasses and contaminated materials, according to the legislation in force.
- c) it registers in the data base of industrial commercial swine holdings, by means of County and Bucharest municipality agricultural and rural development directorates.
- d) it assures the maintenance of wild boars livestock within reasonable limits and area, by carrying out the seasonal hunting, approved above the normal limit and the hunting of an appropriate percentage of young wild boars of the present year.
- e) it assures the sampling and their submission to laboratory in order to achieve the laboratory surveillance for the diagnosis of classical swine fever, according to the approved sampling programs.
- f) it establishes the criteria on which the compensations for the activities of disease eradication rely.
- g) it assures the functioning if collection, transport and neutralizing system for corpses, products and by-products of pork from domestic swine and wild boars.
- h) it draws up the policies of breeding and industrialisation of swine and applies measures for the reduction of risk of occurrence and spreading of classical swine fever.
- i) it gives advice and trains animal owners for implementing the necessary biosecurity measures for preventing the occurrence and spreading animal diseases.

j) it decides, together with the Ministry of Environment and Sustainable Development and the Ministry of Public Health over the conditions of breeding animals in cities and municipalities.

#### **General Directorate of Forestry and Hunting Control**

a) it draws up methodologies specific of the field of activity for the control and surveillance of classical swine fever for wild boars.

b) it monitors the livestock of wild boars from Romania, the predicted evolvments and draws up strategies of maintaining livestock within reasonable limits, so that the circulation of virus be controlled.

c) it monitors and controls the implementing of measures for the managers of hunting areas, according to the Program.

#### **The Territorial Forestry and Hunting Inspectorates**

a) it monitors and controls the implementing of measures for the managers of hunting funds

b) it cooperates with The County and Bucharest Municipality Sanitary Veterinary and Food Safety Directorates in order to implement the Program.

c) It makes available the catagraph of wild boars livestock to The County and Bucharest Municipality Sanitary Veterinary and Food Safety Directorates.

d) It monitors and asses the density of wild boars livestock from the hunting area of Romania.

#### **The Economy and Finance Ministry**

a) it assures the necessary funds for the complete implementation of the Program.

b) it acts, at the entry points of Romanian border, through the National Customs' Authority, in order to inform passengers on some sanitary veterinary restrictions disposed following the evolution of classical swine fever.

#### **The Ministry of Interior and Administrative Reform**

a) it coordinates within the National Committee for Emergency Situations, the measures of eradicating classical swine fever disposed by the National Centre of Disease Control

b) it assures the necessary support for the rapid organization of crises cells, as near to the outbreak as possible, through the County Committees for emergency situations, upon the request of the Local Centre and Bucharest Municipality of Disease Control.

c) it applies the disposals of The National Centre of Disease Control, together with the customs authorities, at the entry points of Romanian borders.

d) it participates at the carrying out of prophylactic measures, with trained staff, so that :

1. to assure abilities of finding out infringements, according to art. 13 of the Decision, to provide settled and mobile teams, together with the inspectors of The Sanitary Veterinary and Food Safety Authority , in order to control movements of live animals, products and by-products of pork, as well as other matter and materials that may carry viruses to and from the outbreak, as well as in the protection and surveillance area.
2. it assures support for the application of all restrictive measures disposed by the The National Centre of Disease Control.
3. it assures support to the authorities from The Sanitary Veterinary and Food Safety Authority for the control of transport means in order to identify illegal transport means of live animals, products and by-products of pork.
4. it assures support to the authorities from The Sanitary Veterinary and Food Safety Authority in order to identify and discourage clandestine slaughtering of animals and illegal trade of animals in unauthorized places of live animals, products and by-products of pork.
5. it assures the link to the county committees for emergency situations, The Committee of Bucharest Municipality for Emergency Situations that coordinates and support the application of measures imposed in the territory and monitor the way of observing them by all factors involved in eradicating major diseases.

#### **The Ministry of Transports**

- a) it participates at the establishment of routes and offers support for the direction and control of the circulation of transport means, in the areas affected by disease.

- b) it assures the observance of the legal provisions in force regarding the collection and disposal of the catering waste coming from international air transports, in the airports' crematory.
- c) It assures the informing of population in airports, ports and stations and bus-stations regarding the restrictive measures imposed by the Sanitary Veterinary and Food Safety Authorities in relation to the epidemiological situation and the reduction of risk of disease spreading.

#### *4.3. Description and delimitation of the geographical and administrative areas in which the programme is to be implemented*

The program will be applied on the whole territory of Romania.

The administrative borders are the Romanian borders and the borders of the 42 counties including Bucharest municipality.

Regarding the wild boar, the geographic areas are considered all hunting grounds on the territory of Romania, split by natural borders: the Carpathians Mountains, the Danube Delta and the Danube arms and the main rivers.

#### *4.4. Measures implemented under the programme:*

##### *4.4.1. Measures and terms of legislation as regards the registration of holdings:*

Directive 64/432/EEC

Directive 92/102/EEC

a) Order of the CVO of the NSVFSA regarding the approval of the sanitary veterinary norm setting detailed rules for registering holdings in the national database for porcine, as provided in NSVFSA Order No. 62/2006.

b) Order No. 61/2006 of the CVO of the NSVFSA regarding the approval of the sanitary veterinary norm for animal health issues affecting the trade of bovine and porcine between Romania and the EU member states, establishing the content of the database for porcine.

c) Order No. 5/2005 of the CVO of the NSVFSA regarding the approval of the Regulation for identifying and registering animals, Art. 3, 4, 5, 9, 12, 15, 20, 25, regulating

the registration of porcine holdings, closing and reopening these, the obligations of holding owners, owners of animals and of those which are holding animals, of the empowered veterinarians, of the official veterinarians within CSVFSDs and NSVFSA regarding the porcine holdings.

#### *4.4.2. Measures and terms of legislation as regards the identification of animals:*

##### *Directive 92/102/EEC*

a) Order No. 5/2005 of the CVO of the NSVFSA regarding the approval of the Regulation for identifying and registering animals, Art. 2, 6, 7, 8, 10, 11, 13, 14-19, 21-24 regulating principles, functions and general objectives of the National Animal Identification and Registration System, for porcine, the obligations of holding owners, owners of animals and of those which are holding animals, of the empowered veterinarians, of the official veterinarians within CSVFSDs and NSVFSA regarding the porcine holdings. In compliance to the provisions of this Order, all pigs of Romania are identified until the age of 20 days through the application of earmarks, with a unique identification code.

b) Order of the Ministry of Agriculture and Rural Development No. 170/2004 presents the scope of the system (Art. 1), the definition of some terms regarding the identification and registration of porcine.

Order No. 170/2004 have to be revised. It is necessary to find out some ways to defeat illegal trade with pigs and meat byproducts in Romania (Directive 92/102/EEC).

#### *4.4.3. Measures and terms of legislation as regards the notification of disease:*

##### *Directive 2001/89/EC*

##### *Directive 82/894/EEC*

a) NSVFSA Order No. 68/2003 regulates aspects referring to announcing, declaring and notifying some transmissible animal disease, establishing the procedure for announcing these, measures taken after announcing them, internal and international notification of transmissible animal disease, official declaration as well as procedures of defeating diseases to be declared.

b) NSVFSA Order No. 77/2005 establishes the coded form of diseases to be notified and the extended list of these diseases, as well as information to be notified in relation to the primary outbreak and those related to the secondary outbreaks and the ways of transmitting the evidence of epizooties.

*4.4.4. Measures and terms of legislation as regards the measures in case of a positive result:*

Directive 2001/89/EC

Commission Decision 2002/106/EC

Measures taken in case of an positive result are regulated in Romania in full compliance to Directive 2001/89/EC transposed trough Orders No. 67/2005 of the NSVFSA President.

*4.4.5. Measures and terms of legislation as regards the different qualifications of animals and herds:*

Not applicable

4.4.5.1. The legal base for emergency vaccination in 2009 is Council Directive 2001/89/EC and the Act of Accession.

*4.4.6. Control procedures and in particular rules on the movement of animals liable to be affected by CSF and thr regular inspection of the holdings or areas*

Directive 2001/89/EC

Commission Decision 2002/106/EC

Before granting the approval of moving pigs, in compliance to Art. 10(3) in Directive 2001/89/EC transposed into Order No. 66/2005 of the NSVFSA President the following procedures are followed:

1. clinical examination made in a 24 h period before moving the pigs
2. if the pigs are moved into another farm, the clinical examination of all pigs in the farm is necessary and in case of pigs older then 3 – 4 months, the temperature for detecting

fever have to be measured at a prevalence of 5% by reproduction sows, 10% by other pigs or 20% by pigs to be delivered at the slaughterhouse.

3. in case of boars, all animals have to be tested in this way.

#### *4.4.7. Measures and terms of legislation as regards the control of the disease*

##### *General measures regarding testing of animals*

The content of this chapter may be found in the Annex of this program.

The legal bases for CSF control is the Commission Decision 2002/106/EC transposed into the legislation of Romania through Order No. 66/2005 of the NSVFSA President.

Clinical examinations, post mortem examinations as well as virological and serological testings are carried out in line with the Diagnostic manual for CSF, Chapter IV, *Checking and sampling procedures* (Commission Decision 2002/106/EC). The main principle is to detect CSF with a confidence of at least 95%, at an estimated disease prevalence of 5% (breeding animals) or 10% (fattening animals). However, the control details are established according to the particular situation of the herd (e.g. suspect herd). Furthermore the type of the herd, (breeding herd, fattening herd, non-professional holding, free ranged pigs, etc.) shall be considered when the control and sampling strategy is designed.

Since a vaccination programme has been carried out since 2007, the serological results have to be interpreted accordingly. Therefore, the procedures regarding serological testings laid down in the Diagnostic manual are applicable only for the non-vaccinated pigs and for the pigs vaccinated with the marker vaccine and subsequently tested with the discriminatory Erns ELISA.

Sampling of wild boar is established, as a general rule, according to the estimated number of animals and not according to the number of hunted animals. The aim is to detect CSF with a confidence of 95% at an estimated prevalence of not more than 5%. However, samples will be taken from at least 59 animals from every area identified for this purpose. In each county sampling areas will be identified according to the surface of each county and the local conditions. In areas where hunting pressure is higher and regularly performed, or selective hunting is carried out as a disease control measure, approximately 50% of the sampled animals belong to the 3 months-1 year age class, 35% to 1-2 years age class and 15% to more than 2 years age class. In areas where hunting pressure is very low or absent, at least 32

animals are sampled for each one of the three age classes. Sampling is carried out in a short period of time, preferably maximum 2 months. The age of the animals sampled is established by their teeth.

#### *Vaccination programme for domestic pigs*

One fundamental part of the programme is the emergency vaccination against CSF. The legal bases for emergency vaccination in 2009 is Council Directive 2001/89/EC. The vaccination shall be carried out for domestic pigs from nonprofessional holdings, on whole territory of Romania continuing the programme starting in 2007. Pigs in commercial farms will not be vaccinated.

**The pigs of nonprofessional holdings will be vaccinated with an attenuated live vaccine.** The emergency vaccination will be carried out during two campaigns - spring and autumn, covering the whole territory of Romania. First campaign starts in March 2009 and the second campaign in September 2009. Between those two campaigns additional monthly vaccination will be carried out of all non-vaccinated pigs from the first campaign and those which have exceed six month of the previous vaccination.

All pigs of nonprofessional holdings more than seven weeks of age, including free range pigs, will be vaccinated. Length of campaigns shall not exceed two months.

The necessary amount of attenuated live vaccine for 2009 is approximately 11.5 million doses of which 5,5 millions will be used in March – May 2009 and 6 millions in September-November 2009.

The the free ranging pigs will be individually identified with cartags, registered in the database and vaccinated in springtime, before leaving backyards. A second vaccination will be applied after 6 month, in during autumn, after they will coming back in holdings, as for domestic pigs kept permanently in non professional holdings.

### *Vaccination of wild boar*

The vaccination programme for 2007 and 2008 of wild boar is conducted similar to the programmes conducted in Germany in previous years.

However, the mode of distribution and the calculation for the required vaccine baits based on the geographical area and density of feral, according to the scheme applied in Germany, is not relevant for the conditions specific for Romania.

During 2009, three oral vaccination campaigns are scheduled: in spring, summer and autumn. At each campaign vaccine baits will be delivered twice at 28 days intervals. Following this schedule, the baits are administered 6 times a year. Vaccination is performed in special places, where the wild boar are tracted with small amounts of food.

No hunting will be allowed 4 days after vaccination. The vaccine baits that were not eaten and the used blisters are collected after approximately 5 days by the personnel in charge.

Under these circumstances, vaccine baits will be placed at feeding locations and the number of baits will be calculated based on the number of wild boars that feed on each of these places. For each administration there should be placed 2 (two) vaccine baits for each wild boar. Thus, it assumes that each year, there are available 12 vaccine baits for each boar, the total annual need is 660,000 baits.

### *Rendering capacities*

For 2009 are available:

- the destroying capacities in 12 areas. The total capacity of distinct authorised plants, 3 processing plants and 9 incineration plants is approximately 105.000 ton/year;
- incineration and burying are available to remove all types of carcasses or slaughterhouse products in the case of suspicions or CSF outbreak, when these can not be admitted in the rendering plants.

### *Diagnostic capacities*

In each county there is a county laboratories which can carry out FAT, IPO and ELISA tests for CSF diagnosis. In 8 county laboratories RT-PCR tests for CSF can be performed. In 29 of

the 41 county laboratories the diagnosis of CSF is carried out without confirmation from the National Reference Laboratory for CSF. The necessary samples for virus isolation, the genome identification and sequential analyses are sent to the National Reference Laboratory for CSF in cases of positive or uncertain results from the county laboratories. All regional laboratories regularly attend „ring tests” organised by National Reference Laboratory for CSF in Bucharest. The uncertain results of regional laboratories are clarified by the central laboratory.

#### *4.4.8. Measures and terms of legislation as regards the compensation for owners of slaughtered and killed animals:*

Currently, compensation is entirely paid from the government centralised fund (Government Decision 1415/2004). This system shall be further renewed in order to establish a rapid and reasonable system of compensation for farmers after a CSF outbreak.

## **5. General description of the costs and benefits**

### **Programme costs**

Programme financing will come from NSVFSA budget. The necessary funding for to compensate the owner the dead or emergency slaughtered animals suspect or infected with CSF, will come from the Ministry of Agriculture budget .

These financial resources are necessary among others for:

- provide a necessary support, at the request of veterinary services, for measures of sacrificing and transport of animals from the outbreaks from the protection and surveillance areas;
- to offer the necessary support, at the request of veterinary services, to hold temporarily or permanently the animals in holdings, slaughterhouses, processing establishments of animal origin products, animal fairs, meat markets and other, in accordance with the measures provided in disease control programs;
- the control of the means of transportation of living animals on public roads in order to track down illegal transports;
- functioning of an efficient collecting, transport and neutralization system of dead animals and animal wastes;

- providing a compensation system, in conformity with compensations requests for dead animals or slaughtered to eradicate the disease.

For programme functioning, financial resources are necessary to achieve all preliminary conditions for program implementation. These include the coordination of authorities' efforts to support pigs professional holdings set up, capable to apply specific measures of biosecurity and, also:

- to have a functional I&R system;
- to pursue owners that they will be fairly compensated in a adequate period of time;
- to have implemented a rendering functional system.

### **Benefits of the programme**

- The surveillance programmes applicable to slaughterhouses and pig holdings shall assist in preventing spread of the disease via movement of live pigs and products of pigs
- The surveillance programmes for determining the extent of the CSF in the wild boars population shall assist in obtaining epidemiological data for use in potential oral vaccination programs and the application of measures to prevent transmission of virus from *feral pigs (mainly wild boars)* to pigs (domestic).
- The eradication of CSF from pigs (domestic) and the *feral pigs (mainly wild boars)* population reduces pig production costs and give opportunities for access to international trade in live pigs and pig meat.

**6.Data on the epidemiological evolution during the last six years**

**6.1. Evolution of the disease**

**6.1.1. Data on evolution of the disease**

**6.1.1.1. Data on herds (a) (one table per year per disease/species)**

## 6.2. Stratified data on surveillance and laboratory tests

All tests performed are in accordance with the Diagnostic manual for CSF (Commission Decision 2002/106/EC)

### Description of the used serological tests:

1. ELISA test for antibody detection.
2. Fluorescent antibody virus neutralization test (FAVN) or Neutralising peroxidase-linked antibody assay (NPLA) to confirm ELISA positive results

### Description of the used virological tests:

1. The direct immunofluorescent test (a rapid test detect CSFV antigen).
2. Immunoperoxidase Test for differentiation of pestiviruses by monoclonal antibody.
3. Virus isolation performed on PK-15 cell line
4. RT – PCR to detect CSFV nucleic acid

(b) Region as defined in the eradication programme of the Member State.

(c) Herds equal flocks, or holdings as appropriate.

## 6.5. Data on vaccination programmes

Years: 2001 - 2008      Disease<sup>(a)</sup>: CSF

Animal species: Pigs

### Description of the used vaccination scheme:

In Romania, all domestic pigs kept in backyards and sanitary-veterinary authorized units, used to be subject to prophylactic vaccination according to the schematic plan/ concept approved by the central veterinary authority as follows: 1.- 55- 60 days old, 2. - 120 days old.

Due to certain situations, such as poor feeding of the pigs, vaccination was carried out at 90 days age for underdeveloped / runtied populations.

- breeding sows and boars twice a year during the campaign

- breeding young sows and young boars when they are transferred to the gestation sector.

Starting with 2002, vaccination against classical swine fever was banned with all domestic pigs kept in sanitary veterinary authorized units and backyards situated in the counties of : Arad, Bihor, Caras Severin, Salaj, Satu Mare, Timis, later on 6 more counties were included : Cluj, Alba, Maramures, Mehedinti, Gorj, Hunedoara starting with 2003.

Starting with the 1st of January 2006, Romania took on the responsibility to ban prophylactic vaccination on the whole territory.

In 2006 vaccination was banned on all territory of Romania for all domestic pigs and wild boar. However, in December of 2006, according to the Commission Decision 2006/802/EC, starts the Program for eradication of classical swine fever based on emergency vaccination of domestic pig.

In 2007 and 2008 (till April) vaccination for classical swine fever was performed on the entire territory of Romania, for all categories of pigs in professional and non-professional holdings. The pigs from commercial industrial holdings were vaccinated with a **marker vaccine** and the pigs from non-professional holdings were vaccinated with a **live attenuated vaccine**.

## 6.6. Data on wildlife

### 6.6.1. Estimation of wildlife population

Years: 2001-2008      Metoda de estimare <sup>a</sup>, -

The table shows the total wild boar population of Romania

For all the year 2008 we need 630.000 x 6 times per year = 3.790.000 baits.

For 2009 we estimate 55.000 wilboars x 2 baits/one administration x 6 times per year = 660.000 baits.

Estimation of the population of the concerned wild species

6.6.3.

*Data on vaccination of wildlife*

Years: 2001 - 2008

Disease<sup>(a)</sup>: CSF

Animal species: wild boar

Description of the used vaccination scheme:

Historical data

Since 2002, wild boars were orally vaccinated in the majority of the counties using chicken eggs containing a live attenuated strain virus. Theoretically, one bait was distributed for each wild boar. Vaccine baits were used twice a year during campaigns of revaccination in the cold season, only if snow was present.

In the year 2007 vaccination against Classical Swine Fever in wild pigs was compromise because of certain juridical aspects regarding the tender for the necessary vaccine doses and the virus was detected on the territory of 4 districts in the country

For 2008 we estimate the completion/ execution/ implementation of only 1 "rapel" campaigns from the 3 planned, because until the present date, campaigns have not been executed.

Romania <sup>b)</sup>	Square km Wild boar population	Vaccination programme		
		Number of doses of vaccine to be administered	Number of campaigns	Total number of doses of vaccine administered

## Annex

### Surveillance in commercial industrial holdings

Monitoring in industrial commercial holdings is based on clinical and virological examinations. Animals that show clinical signs (ex. Fever) are preferably used for virological examinations. The following conduct will be used:

#### Clinical examination

Clinical examination includes fever detection. The minimum number of pigs to be examined allows the detection of fever with 10% prevalence, with 95% confidence.

The objectives for clinical examinations are:

- early detection for Classical Swine Fever
  - shortening high risk period regarding Classical Swine Fever;
- Clinical examinations are performed with respect of follow conduct:
- **Daily clinical inspections** for all pigs from commercial industrial holdings are performed by:
    - keeper of the animals
    - private vet employed by the owners
- Animals presenting changes of health status will be clinically examined, including fever detection. Inspections results and clinical exams will be registered in farm files.

Private vets who are employed by the owners examine post mortem dead animals. The number of animals examined "post mortem" must be of at least 6.

The targets for the post mortem exam are mainly recently dead and agonizing animals; a post mortem examination is carried on animals showing lesions that might indicate Classical Swine Fever. The results of those post mortem exams will be registered in farm files.

Daily register in farm files for losses through mortality is to be performed by the keeper.

It is compulsory for the keepers to report weekly to the Local Authority all losses register.

It is compulsory for the keepers to report weekly to the Local Authority every change of the health status (especially when introducing treatments with antibiotics) and any mortality increased over technological flow.

Based on these notifications, Official Vets will go to the farm, immediately, to perform an additional control.

- **Monthly official control** is performed by the official vets who are employed by the Local Authority and consists on:
  - document control and register for the farms regarding productions quotas, losses by mortalities for each month, register regarding performed treatments, register regarding clinical inspections and postmortem exams performed for each day by the private vet.
  - checking biosecurity measure which are drawn up in plans and procedures for each holding.
  - performing clinical examinations for all pigs categories. The main targets for clinical examinations are suckling piglets, scrawny and underdeveloped animals, recently recovered after disease and recently introduced in the farm. Animals presenting health status

modifications will be subjected to a clinical exam that includes the body temperature measurement. The minimum number of pigs to be examined allows the fever detection with a prevalence of 10% and a confidence of 95%. From the animals presenting fever and clinical signs related to classical swine fever there will be taken serum blood samples for the PCR test.

- "post mortem" animal examination – the number of animals to be subjected to the post mortem exam is minimum 10. The main target of the post mortem exam is represented by: suckling piglets and young animals.

**Virological examination** of different groups of pigs that will be subject to specific testing and, usually, sick animals will be sampled.

1. pigs between 60-120 days of age are blood sampled twice a year – blood samples with anticoagulant with a prevalence of 10% and a confidence of 95%. Subject are feverish pigs, and for the pigs sampling is carried out randomly. Samples are tested by RT-PCR in pool system of 10 samples each.
2. Dead and agonizing animals a post mortem examination is carried out and if it shows lesions that might indicate classical swine fever samples are taken for virological examinations. The number of animals of post mortem examined animals must be at least 5.
3. Apart from the presence of lesions from classical swine fever monthly 10 sets of organs from each farm, are taken from dead animals to carry out virological examinations.

The following virological examinations will be carried out:

4. RT-PCR for specific genome detection;
5. Rapid immunofluorescence tests
6. Virus isolations

### **Serological examinations**

The National Reference Laboratory for CSF and county laboratories will carry out tests to detect specific antibodies for classical swine fever. National Reference Laboratory within The Institute for Diagnosis and Animal Health carries out the selection based on evaluating the criteria regarding the qualifications of the experts from county laboratories.

- fattening pigs, more than 4 months of age, are sampled 4 times a year to detect a prevalence of 10% with a confidence of 95% for each epidemiological unit. ELISA kits will be used to detect specific antibodies for classical swine fever.
- sows vaccinated only marker vaccine are sampled at an interval of 6 months from each farm to detect a prevalence of 5% with 95% confidence.

For the sows vaccinated with marker vaccine, will be used ELISA kit to detect antibodies against Erns protein.

For the fattening pigs which were never vaccinated against classical swine fever can be used ELISA kit to detect antibodies against F2 protein.

The procedures that must be applied after obtaining positive serological results are mentioned in the EU legislation. According to Chapter. III, of Commission decision 2001/89/CE, these holdings are considered "suspect". The measures to be applied are mentioned in chapter IV of the above mentioned Decision and article 4(2) of Council Directive 2001/89/CE. These include:

- visiting suspect holdings by official veterinarians;
- checking the production records and of the health status of the pigs in the holding;
- inspecting every facility of the establishment;
- clinical examination;
- retesting the samples with virus neutralizing tests, using different pesti-viruses, in case of unvaccinated animals;
- retesting after at least two weeks for uncertain results;
- these measures must be supplemented by virological investigation for virus detection and sequencing the found viruses.

#### Objectives for pigs testing from professional holdings

### **Surveillance in nonprofessional holdings**

For testing pigs coming from nonprofessional holdings, a village shall be considered an epidemiological unit. Preferably, for virological examinations animals presenting clinical signs are used (e.g. fever) and the following course is respected:

1. Clinical surveillance of all pigs from nonprofessional holdings twice per year, beforehand emergency vaccination against CSF. For animals which have fever or are clinically affected, samples for virological examination with RT-PCR are taken.
2. Serological surveillance, for vaccination quality control, on serum samples taken randomly from pigs at more than 28 days from vaccination. To this purpose, 15 samples will be taken, twice a year, from each village (comuna)

Serum samples are sent to the county sanitary veterinary laboratories.

Samples will be worked out with ELISA tests for detection of antibody against F:2 protein .

### **3. Virological surveillance**

- Virological examinations on samples taken from pigs showing clinical signs of CSF at clinical surveillance.
- Virological examination for detection of viral antigen on dead animals, with age more than 2 month is carried out in case of any suspicion of CSF.

Owners or managers of land where free range pigs grow in freedom are bound to notify the veterinarian free practice empowered under the law, cases of swine death or sickness, in order to harvest samples for laboratory examination for classical swine fever.

The following virological examination shall be carried out:

- RT-PCR for the specific viral genome detection
- sequential analyses
- rapid test for detection of antigen by test immunofluorescence
- immunoperoxidase test for pestviruses differentiation by monoclonal antibodies (IPO)
- virus isolation carried out on line PK-15. Virus isolation shall be used as reserve method.

Detection test of antigen in stem samples and IPO shall be carried out at regional level; virus isolation and RT-PCR shall be carried out at National Laboratory for CSF and in 8 county laboratories. When CSF virus is detected, the National Reference Laboratory for CSF will establish genotype isolated.

## **Wild boars surveillance**

The scope is to continuously assess the epidemiological situation and to monitor the results of the vaccination campaigns to obtain a reliable data bases. To accomplish this objective, during hunting seasons 2008-2009 and additional hunts samples shall be collected from all hunted or found dead wild boars; all samples shall be subject to the serological and virological testing.

The following virological tests are used:

- RT-PCR for viral specific genomic detection, on samples from dead animal or animals under 1 year of age;
- Rapid immunofluorescence test for all hunted animals;
- Virus Isolation in cell culture in all positive cases.

The following serological tests are used:

- ELISA test for the antibody detection
- Virus Neutralization Test

The antigen detection test in sternum samples shall be carried out for the virus detection. The virus isolation and RT-PCR shall be used as reserve.

The antibody detection test will be carried out at regional level. The virus isolation and RT-PCR will be carried out at the National Laboratory for classical swine fever. If classical swine fever is detected the National Laboratory for CSF shall establish the genotype of isolate viruses.

The ELISA serological test shall be carried out in county laboratories. The neutralization Test is used as reserve test.

All samples sent to laboratory are accompanied by a questionnaire comprising at least the age and sex of animal, the place where the animal was hunted. The hunters and the hunting areas managers will take samples as it follows:

- part of sternum, compulsory;
- parts of spleen, kidney, tonsils and lymphonods;
- samples of blood, ( from heart or chest) if possible.

**1. Number of outbreaks for 2007**Report 2007 Annex VI  
Annex VI Table A 2.3 Data of infection

Programme 2009 (table1)

domestic pigs/ number of infected animals	4/16	168/211
wild boars /number of infected animals	168/11537	16

Report 2007 Annex VI Table A -- corrected document:

**2.3. Data on infection:**

Disease/species	Number of herds infected	Number of animals infected
CSF/PIGS	168	58198 (53689 + 4509)
CSF/WILD BOARS	4 counties	25

Programme 2009 (table1) – corrected document:

**Table 1:** Overview of the CSF situation in Romania during 2001- 2008 (15.04.2008)

	2001	2002	2003	2004	2005	2006	2007* <sup>1</sup>		2008*
							Non- prof.	Commercial farms	
CSF outbreaks in domestic pigs	1	45	155	180	1508	803	165	3	0
Dead pigs due to CSF	13	452	1021	634	2982	1903	507	11.030	0
Destroyed pigs due to CSF	0	985	3592	1624	8045	5898	4.002	42.659	0
Total number of affected pigs	13	1437	4613	2258	11027	7801	4.509	53.689	0
Affected villages	1	45	155	161	482	393	95	2	0
Affected counties	1	17	16	26	33	35	19	1	0
CSF cases in wild boar	5	2	6	4	43	18	25	0	0

The total number of outbreaks is 168 and no. of affected animals is 58,198 (53,689 + 4,509) and corresponds with the infected animals specified in part 6.3. (2007) in the program for 2009, the total number of dead animals or killed in order to eradicate CSF outbreaks (168).

### 6.3. Data on infection (one row per year)

Years: 2001 - 2008	Disease <sup>(a)</sup> : CSF	Animal species: Pigs
Romania <sup>(b)</sup>	No. of herds infected	Number of infected animals
2001	1	13
2002	45	1437
2003	155	4613
2004	180	2258
2005	1508	11027
2006	803	7801
2007	168	58198
2008	0	0

### 2. Vaccination of pigs

Report 2007 annex IV

pigs GP 7 763 687

The new figures representing no of doses used (column 12 = 7.891.330). Final figure (7 891 330) according with the corrected Annex IV and Annex VII A

pigs comercial farms 4 108 412

No of doses used in commercial farms 4 108 412 (marker vaccine – no request for co financing in Annex VII)

Requested for payment in VII A 7 891 330 (correct figure)

In Programme for 2009 in part 6.5. under information on vaccination programme for 2007

Number of doses of vaccines administered in 2007: 10 490 103

In program 2009 part 6.5 row 2007 have been change correctly.

No. Vaccinated animals (inoculations) 11,284,116 (nonprofessional +commercial)

No. doses used 11.999.742 (live attenuated +marker vaccine)

Romania <sup>(b)</sup>	counties	Total number of animals	Information on vaccination programme					
			Number of herds <sup>(c)</sup> in vaccination programme	Number of vaccinated herds <sup>(c)</sup>	Number of vaccinated animals	Number of doses of vaccine administered	Number of vaccinated adults <sup>(c)</sup>	Number of young <sup>(d)</sup> animals vaccinated
2001	42	4,447 000			8.800.000	8.900.000		
2002	42	5058000			10.100.000	10.200.000		
2003	42	5.145.000			2.190.000	2.230.000		
2004	42	6.495.000			1.640.000	1.660.000		
2005	42	4.908.674			1.090.000	1.100.000		
2006	42							
2007	42	5.400.000	1,400,186	1,400,186	11.284.116	11.999.742	1954436	7895236
2008 (15.04.)	42	4800000	1400175	412244	2394361	2811512	156252	625992

Regarding to Annex no.IV

We suggest the elimination of columns 4, 5, 6 and 7 on "Information on the vaccination of young animals" consider them as irrelevant, taking into consideration the fact that in Romania was talking about a "mass" vaccination, both in non-professional holdings and commercial.

Annex no IV **Commercial holdings**: Column no.8 and column. 9 correspond with the Column.No 2, the total number of commercial farms approved for vaccination marker vaccine is 195. Accordingly 2009 programme will be amended in part 6.1.1.1., as follows:

Year 2007

Situation on date

Holding Type	Disease (b) CSF						Animal species Porcine			
	Total No of herds	Total No of herds under the programme	No of herds checked	No of positive herds	No of new positive herds	No of herds depopulated	% positive herds depopulated	Indicators		
	2	3	4	5	6	7	8=(7/5)x100	9=(4/3)x100	10=(5/4)x100	11=(6/4)x100
Romania										
Non-Professional	1,900,000	1,900,000	1,900,000	164	164	164	100	100	0,008	0,008
Commercial Industrial	195	195	195	3	3	3	100	100	1.8	1.8
<b>Total</b>	<b>1,900,195</b>	<b>1,900,195</b>	<b>1,900,195</b>	<b>168</b>	<b>168</b>	<b>168</b>	<b>100</b>	<b>5,27</b>	<b>0,159</b>	<b>0,156</b>

Romania has received 7,050,000 doses marker vaccine. In the year 2007 were used 4,108,412 doses (according to column No 12 of Annex IV). The difference of 2,941,588 doses has been used in December 2006 and in 2008 by the end of April. A stock of about 265,000 doses has been reported to date on which INTERVET decided to withdraw the product.

#### Annex no IV Non professional holdings

Column no.8 and column. 9 correspond with the Column.No 2, the total number of nonprofessional farms where has been applied vaccination with live attenuated vaccine is 1,759,074.

For this purpose Romania purchase 9,896,473 doses live attenuated vaccines.

2,009,750 doses of live attenuated vaccine are received from EC vaccine bank (no request for co financing)

According annex No.VII A, a no of 7.891.330 doses were used in 2007.

The rest of 2,005,143 doses purchased by Romania in 2007 were used in 2008 and has not been reported to demand payment in 2007 (Annex VII).

### 3. Number of tests

Report of 2007 Annex VII A

Programme for 2009

(6.2.1. data on surveillance 2001-2008)

Number of serological tests in domestic pigs	121 602	72 173
Virological tests	9 089	6 627
Serological tests in wild boar	7 701	no information in the programme
Virological tests in wild boar	12 863	no information in the programme

**Number of test provide in annex VII domestic pigs and wild boar are correct ones.**

Reporting mistakes occurred at Program 2009, reporting for the year 2007 in part 6.2.1. which has been amended accordingly.

#### 6.2.1.Stratified data on surveillance and laboratory tests

Years: 2001-2008 (31.07)

**ANNEX VI**  
**Requirements for final reports**

Member State: ROMANIA  
Date: 20.05.2008  
Disease/zoonosis(a): CSF

Animal species: PIGS AND WILD B

Minimum content of the report(b):

1. Submission of data (Annex II, III, IV,V and Va, as appropriate)
2. Technical evaluation of the situation:
  - 2.1. Epidemiological maps for each disease/infection see MAP 1
  - 2.2. Information on diagnostic test used (table A):

**Table A**

Disease/species	Test(c)	Type of sample(d)	Type of test(e)
CSF/PIGS	Elisa E2,Elisa Erns, IFD,IPO,P.C.R.	Blood Serum, Plasma, Organs	Screening test, confirmations test, Complementary test
CSF/WILD BOARS	Elisa E2,Elisa Erns, IFD,IPO,P.C.R.	Sternum,Organs	Screening test, confirmations test, Complementary test

2.3. Data on infection:

Disease/species	Number of herds infected	Number of animals
CSF/PIGS	168	58198 (53689 +
CSF/WILD BOARS	4 counties	25

2.4. Reasons for suspension the free or officially free status for each disease (table B):

**Table B**

Disease/species	Reason(f)	Number of herds su

2.5 Achievement of targets and technical difficulties

Achievements of targets:

From the main targets that we set for 2007 we have 2/3. All domestic pigs from non professional and commercial industrial holdings have been vaccinated and surveillanced. We have not perform vaccinations for wild boars.

Difficulties :

Delays in providing/purchaseing attenuated live vaccine or marker.

Delays in purchasing needles, syringes, tattoo kit

Lack of the vaccines bites used to apply emergency oral vaccinations of wild boars due to unjusti contestations a tender, made by same suppliers / supplying companies

Ensuring, based on a requisite, such kits for serological testing after emergency vaccinations per commercial industrial holdings

2.6 Additional epidemiological information: information on epidemiological inquiries, abortions, lesions in abattoir or necropsy, human cases, etc.

### 3 Financial aspects:

#### 3.1 Completed tables of Annex VII

#### 3.2 Overview over the money spent in the context of the programme

The "Programme for the control and monitoring of classical swine fever" presented by Romania was approved by

Decision 2006/876/EC approving programmes for the eradication and monitoring of animal diseases, of certain T

the prevention of zoonoses presented by Bulgaria and Romania for the year 2007 and amending Decision 2006/E

Commission Decision 2006/802/EC approves the plans for the eradication of classical swine fever in feral |

emergency vaccination of those pigs and of pigs in holdings against that disease in Romania.

The financial contribution by the Community was provided for the following:

- cost of virological and serological tests of domestic pigs and wild boar
- cost for the purchase and distribution of vaccines plus baits for the vaccination of wild boar
- cost for the purchase of the live attenuated vaccine for the vaccination

In this context, the following costs were incurred for the above mentioned activities in order to implement app provisions of the programme:

- costs for virological and serological tests of domestic pigs and wild boar (ELISA E2, ELISA Ems, IFD, IPO, PCR) 580,296.74 Euro
- cost for the purchase of the live attenuated vaccine for the vaccination of pigs in amount of 2,317,743.33 Euro. . for the administration of vaccine was 20,767,778.43 Euro.
- cost for compensations in case of outbreaks was 362,531.67 Euro.

The acquisition of live attenuated vaccine was made in accordance with the Government Decision No. 1700/29 No approving the strategic programme on monitoring, control and eradication of classical swine fever in Romar organize two public procurement procedures in order to purchase the live attenuated vaccine for vaccination of pigs been signed two contracts, the price' vaccine being 0.41 Euro, respectively 0.19 Euro.

The cost were calculated on the following rate: 1 Euro = 3.679 RON on 30 April 2008.

#### 3.3 Detailed listing of the costs.

- (a) Disease or zoonosis and animal species if necessary.
- (b) For programmes on zoonotic salmonella only points 1, 2.2, 2.3, 2.5, 2.6, and 3 should be covered
- (c) indicate: skin test, RB, FC, iELISA, cELISA, isolation, PCR, bacteriological analysis, other (specif
- (d) Indicate if necessary: blood serum, blood, plasma, milk, milk bulk tank, suspect lesion, foetus, fa dead chickens, meconium, others (specify).

(e) Indicate: screening test, confirmatory test, complementary test, routine test, others (specify).

(a) Region as defined in the approved eradication programme of the Member State.

(b) Data to be given in national currency, VAT excluded.

We certify that:

- this expenditure was actually incurred, accurately accounted for and eligible under the provisions of Decision / Regulation (EC) No 2006/876 (mention specific financing decision);

- all supporting documents relating to the expenditure are available for inspection, notably to justify the level of compensation for animals;

- the breakdown of the underlying operations is recorded on computer files and is available to the relevant Commission departments on request;

- no other Community contribution was requested for this programme and all revenue accruing from operations under the programme is declared to the Commission;

- the programme was executed in accordance with the relevant Community legislation, in particular the rules on competition, the award of public contracts and state aid;

- control procedures apply, in particular to verify the accuracy of the amounts declared, to prevent, detect and correct irregularities and to pursue fraud.
