

EUROPEAN COMMISSION
HEALTH AND CONSUMERS DIRECTORATE-GENERAL

Director General

SANCO/10684/2013

Programmes for the eradication, control and monitoring of certain animal diseases and zoonoses

Survey programme for Avian Influenza

Croatia

Approved* for 2013 by Commission Decision 2012/761/EU

* in accordance with Council Decision 2009/470/EC

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

1. Identification of the programme

Member state : HRVATSKA

Disease : avian influenza in poultry and wild birds

Request of Community co-financing from beginning of: 2013 to end of 2013

1.1 Contact

Name : Ankica Labrovic

Phone : + 385 1 610 6670

Fax. : + 385 1 610 9207

Email : labrovic@mps.hr

2. Description and implementation of the surveillance programme in poultry

2.1.1 Designation of the central authority in charge of supervising and coordinating the departments responsible for implementing the programme

(max. 32000 chars) :

Veterinary Directorate of the Ministry of Agriculture is the national competent authority responsible for supervision and coordination of implementation of the Program.

Animal Health Sector of the Veterinary Directorate (VD) is responsible to develop the Program in coordination with a AI diagnostic laboratory of the Croatian Veterinary Institute (CVI).

The program is implemented by authorised veterinarians who provide for sampling and submission of samples to the AI diagnostic laboratory.

Supervision of implementation of the Program on the field is carried out by veterinary inspectors

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

(officials of the VD).

2.1.2 *System in place for the registration of holdings*

(max. 32000 chars):

According to the provisions of Article 38, paragraph 1 of the Veterinary Act (Official Gazette 41/2007), farms of ungulates and equidae exceeding 20 conditional animal units, poultry and rabbit farms exceeding 10 conditional animal units, hatcheries, wild game breeding farms, establishments for farming of fish and molluscs and other facilities of aquaculture must comply with the stipulated veterinary-health and biosecurity conditions.

Pursuant to the provisions of Article 38, paragraph 3 of the Veterinary Act, all farms are to be registered in the Farms Register, which is an integral part of the Central Register of Domestic Animals (CRDA), the responsibility for which lies with the MA's Veterinary Directorate. The Directorate has entered into contract with the Croatian Agricultural Agency (CAA) delegating to the CAA maintenance of CRDA.

All holdings keeping gallinaceous birds (chickens, turkeys, pheasants, partridges and quails) and ratites (ostriches) are registered. Also holdings keeping domestic waterfowl (e.g. ducks, geese and mallards for restocking supplies of game) are registered in the CDRA. For every holding CRDA contain information on unique holding number name of the keeper, address, geographical coordinates, animal species and number of animals.

2.1.3 *Design (risk based or surveillance based on representative sampling)*

(max. 32000 chars):

AI surveillance based on representative sampling scheme will be implemented.

Number of poultry holdings to be sampled is calculated based on Tables 1 and 2 of the Annex I of the Commission Decision 2010/367/EU and according to the poultry species present on the poultry holding. Holdings to be subject of sampling will be randomly selected from the list of all holdings of a specific poultry species and production categories keeping more than 100 animals. This will assure representativeness so generalization of findings to all holdings of a specific poultry species and production categories keeping more than 100 animals.

Backyard poultry in settlements where poultry is kept in proximity to large surface waters and migratory birds resting or nesting areas as well as backyard poultry in holdings where more than 50 animals of different poultry species (e.g. gallinaceous and domestic waterfowl, mixed) are kept together will also be included in the Program.

Target population (poultry production categories) to be included in the surveillance program, are:

1. laying hens
2. free range laying hens
3. chicken breeders

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

- 4. turkey breeders
- 5. fattening turkey
- 6 farmed game birds (pheasants, partridges and quails)
- 7. backyard flocks

Number of holdings from each of the production categories mentioned above, to be subject of sampling, will assure identification of at least one infected poultry holding if the prevalence of infected holdings of this category is 5% or more, with 95% confidence interval (CI).

As regards backyard poultry, those keeping more than 50 of animals of different poultry species (e.g. gallinaceous and domestic waterfowl, mixed) are considered as an independent sampling frame and number of holdings to be samples will ensure identification of at least one infected poultry holding if the prevalence of infected holdings in that group of backyard holdings is 5% or more, with 95% CI.

In the sampling frame of backyard holdings, some holdings will be included based on the prior information on risk, collected within the frame of AI surveillance program (Tables providing an information of the results of AI surveillance in domestic poultry are attached to this document).

Number of birds to be sampled, per holding included in the Program, will ensure detection of at least one AI seropositive bird if the prevalence of seropositive birds on a holding is 30 % or more, with 95% confidence. Blood samples for serological examination will be collected from all poultry production categories and species and 10 birds will be sampled per one epidemiological unit on the holding (e.g on laying hens holdings in average there are 2 epidemiological units, while on chicken breeders in average there are 1,5 epidemiological unit).

Samples will be taken at farm level. Whenever possible samples will be taken at the slaughterhouse.

The following domestic waterfowl categories will be included in the program:

- 1. ducks breeders
- 2. geese breeders
- 3. fattening ducks
- 4. farmed game birds (waterfowl).

Number of duck, goose and mallard holdings to be sampled will ensure identification of at least one infected holding if the prevalence of infected poultry holdings of a specific poultry production category is 5% or more with 99% CI.

Number of ducks, geese and mallards to be sampled, per holding included in the program, will ensure detection of at least one AI seropositive bird if the prevalence of seropositive birds on a holding is 30 % or more, with 95% confidence.

Blood samples for serological examination will be collected form all poultry production categories and species and 20 birds will be sampled per one holding.

Samples will be taken at farm level. Whenever possible samples will be taken at the slaughterhouse.

In case of detection AI seropositive birds sampling for virological testing for AI will follow.

In case of change of epidemiological situation the Program will appropriately be amended.

Responsibilities

1. To ensure the implementation of the Programme is the responsibility of the VD of the Ministry of Agriculture.
 2. Bird samples shall be taken and submitted to the laboratory by authorised veterinarians.
- 2.1 The authorised veterinary organizations shall:

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

- once a month submit reports to the VD on the sampling of poultry in accordance with this Programme.
 - submit, together with reports referred in the previous paragraph, a copy of the completed Sample Submission Forms as specified in the Annex to this Programme.
3. The laboratory testing of samples shall be carried out by Poultry Centre of the Croatian Veterinary Institute, Heinzelova 55, Zagreb, which is the National reference laboratory for AI.
The national reference laboratory shall:
- report all positive results to the Veterinary Directorate as soon as possible;
 - report all negative results to the Veterinary Directorate once a month.
4. Competent veterinary inspectors shall supervise the implementation of the Programme on the spot.

2.1.3.1 *Short description of predominant poultry population and types of poultry production*

(max. 32000 chars):

Poultry production in Croatia may be described as follows: 92% of poultry production refers to hens, 2% to turkeys, 2% to ducks and 3% to geese.

Other types of poultry, such as guinea fowls, quails, pheasants are insignificant within poultry population. Fattening of broilers, as well as of turkeys assures significant meat production, while breeding of ducks and geese is not as represented, being just semi-intensive for local market supply. Croatia has enough supplies of poultry meat for its own market. Around 70% of fattened poultry originates from intensive systems, other 30% refers to traditional, semi-intensive production for individual consumption. In Croatia, there is a yearly production of 600 000 breeding broiler layers, 40 million broilers and around 1.2 million turkeys. There are also 22 000 breeding commercial layers and around 1.7 million layers for egg production. The existing poultry production capacities are greater, however they are not fully exploited. Egg production is intensive in large companies and on family farms. There is also extensive and semi-intensive seasonal production on family infields. Around 30% of egg production is realized within semi-intensive systems and 70% within intensive production systems.

2.3 Sampling procedures, sampling periods and frequency of testing

(max. 32000 chars):

Blood samples will be taken at farm level. Whenever possible samples will be taken at the slaughterhouse. Sampling on poultry holdings included in the Program will be carried out once a year, during the period from 1 January to 31 December, 2012. Bird samples shall be taken and submitted to the laboratory by authorised veterinarians. Samples shall be taken from poultry during their production age or, in the case of fattening poultry, during the final fattening phase. Samples may be taken during the vaccination of poultry against Newcastle disease (in accordance with the Annual Order). Blood samples taken to check immunity against Newcastle disease may also be used for the surveillance of antibodies to AI virus subtypes H5 and H7. At least 2 ml of blood (without anticoagulants) shall be taken. During storage and transportation, the samples must be kept at a temperature not exceeding 4°C and they must be submitted to the national laboratory for avian influenza within 48 hours. If a sample cannot be transported to the national laboratory within this period, the blood serum must be separated, frozen, and sent to the laboratory in the frozen state.

Blood samples shall be sent to the following national laboratory:

Croatian Veterinary Institute

Poultry Centre

Heinzelova 55, Zagreb 10000

Contact telephones: 01/2441 392; 2441 394; 2440 211.

Fax: 01/2441 396.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

2.4. Laboratory testing : description of the laboratory tests used and follow up investigations

Description of the used serological tests : (max 32000 chars)

The laboratory testing of samples shall be carried out by Poultry Centre of the Croatian Veterinary Institute, Heinzelova 55, Zagreb, which is the National reference laboratory for AI.

Standard haemagglutination inhibition test for detection of AI antibodies of H5 and H7 subtypes is used according to the Council Directive 2005/94/EC, OIE Terrestrial Manual 2009 (Chapter 2.3.4.) and Diagnostic Manual for Avian Influenza (Official Gazette 99/2008). For H5 subtype for initial testing teal/England/7894/06 (H5N3) antigen is used. All positives are tested with chicken/Scotland/59 (H5N1) antigen to eliminate N3 cross reactive antibodies; for H7 subtype for initial testing turkey/England/647/77 (H7N7) antigen is used. All positives are tested with African starling/983/79 (H7N1) antigen to eliminate N7 cross reactive antibodies. If standard antigens are not supplied by the EU AI reference laboratory, following antigen are used instead: for H5 primary antigen is Av-R5371/Croatia/2007 (H5N1) and secondary antigen is Mallard/Croatia/1/2006 (H5N3), for H7 primary antigen is Av-R7152/Croatia/2007 (H7N2) and secondary antigen is Turkey/Italy/3560/1999 (H7N1).

The national reference laboratory shall:

- report all positive results to the Veterinary Directorate as soon as possible;
- report all negative results to the Veterinary Directorate once a month.

3. Description and implementation of the surveillance programme in wild birds

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

3.1.1 Designation of the central authority in charge of supervising and coordinating the departments responsible for implementing the programme and relevant collaborating partners (e.g. epidemiologists, ornithologists, nature bird observation and hunter organisations).

(max. 32000 chars):

VD of the Ministry of Agriculture is the national competent authority responsible for supervision and coordination of implementation of the Program. Animal Health Sector of the Veterinary Directorate is responsible to develop the Program in coordination with AI laboratory expert as well as ornithologist from Croatian Veterinary Institute and Institute of Ornithology of the Croatian Academy of Sciences and Arts. Ornithologist take major part in sampling and identification of a species of wild bird.

The implementation of the 2013 Programme for AI in Wild Birds will be the responsibility of the VD of the Ministry of Agriculture and the following institutions will participate in the implementation of the Programme:

- Croatian Veterinary Institute – Poultry Centre;
- Institute of Ornithology of the Croatian Academy of Sciences and Arts.

3.1.2 Description and delimitation of the geographical and administrative areas in which the programme is to be applied

(max. 32000 chars):

The spatial distribution of the locations at which the survey for influenza virus in wild birds will be conducted in 2013 is shown on the Map provided in the attachment. Locations identified on the Map are areas in the country where abundance and diversity of birds, particularly water birds is significantly higher than on other areas in the country. Also on these locations a large number of different species of migratory birds (i.e. the sites are an important crossing of migration routes or a mixing sites of passage migrants from various areas) are present. It is expected that on such sites expected mortality or morbidity of wild birds is higher. Active searching and monitoring of dead or moribund wild birds in particular those of target species on such locations will allow for timely detection of HPAI of subtypes H5N1 in wild birds.

The following locations are of the main interest for active searching of dead or moribund wild birds:

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

- | | |
|-------------------|---|
| Fish ponds | <ul style="list-style-type: none">1. «Draganic», Jastrebarsko2. «Fish pond», Oriovac/Jelas Polje, Slavonski Brod3. «Fish pond», Donji Miholjac4. «Fish pond» Končanica, Daruvar5. «Fish pond Grudnjak», 33515 Grudnjak6. «Fish pond 1905» Našička Breznica, Našice7. «Fish pond Poljana», Poljana / «Riba Garešnica», Garešnica8. «Fish pond Česmi» (Narta, Siščani, Vukšinec, Blatnica) Dubrava, Kostanj bb / Narta9. «Fish pond» Lipovljani, Novska |
|-------------------|---|

Artificial water reservoirs

- 10. Varazdin - Drava
- 11. Donja Dubrava - Drava
- 12. Šoderica - Koprivnica

Major wetland areas (nature parks)

- 13. Lonjsko Polje Nature Park
- 14. Kopacki Rit Nature Park
- 15. Vransko Lake
- 16. Delta of the Neretva river

Waste disposal area

- 17. Prudinec (Jakusevac, Zagreb)
- 18. Waste disposal area Kosambra, Porec.

Also taking into consideration experience during the occurrence of HPAI of subtype H5N1 in wild birds in Croatia in 2005 and 2006, the majority of dead birds submitted to the laboratory for testing were originating from these locations. On two locations mentioned above HPAI of subtype H5N1 was confirmed in wild birds in 2005 and 2006.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

3.1.3 Estimation of the local and/or migratory wildlife population

(max. 32000 chars):

Estimation of size of wild birds populations in the country was done by ornithologist from Croatian Veterinary Institute and Institute of Ornithology of Croatian Academy of Sciences and Arts and it is summarized in the Table attached to this Program.

3.2 Design, criteria, risk factors and target population(3)

(max. 32000 chars):

Passive surveillance scheme will be implemented in order to provide for laboratory investigation of moribund or wild birds found dead so to allow for timely detection of HPAI of subtypes H5N1 in wild birds. Active searching and monitoring of dead or moribund wild birds of target species will in particular be focused on locations where increased incidence of morbidity and/or mortality wild birds is expected to be observed easier than on other areas of the country (e.g. areas close to lakes and waterways, wetlands, ponds, sea, waste disposal area).

Target population are mainly migratory water birds that have been shown to be at a higher risk of becoming infected with and transmitting the HPAI H5N1 virus. Wild bird species to be targeted for sampling and testing will be those as listed in Part 2 of the Commission Decision 2010/367/EU, that are present in the country.

The working group (made up of ornithologists, virologists and epidemiologists) continuously monitor and provide for analysis of results of the Programme. The group also provide for instructions on sampling and submission of samples to the laboratory as well as information dissemination about

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

water bird species that are the main target for passive surveillance for HPAI .

- (3) Areas at risk (wetlands in particular where links with high density poultry populations), previous positive findings as referred to in point 2 of Part 1 of Annex II to Commission Decision 2010/367/EC should be taken into account and if possible complemented by a map.

3.2.1 WILD BIRDS focussed on target species

Investigations according to the surveillance programme set out in Part 2 of Annex II to Decision 2010/367/EC

NUTS (2) code/region (a)	Wild birds to be sampled (b)	Total number of birds to be sampled	Estimated total number of samples to be taken for active surveillance (c)	Estimated total number of samples to be taken for passive surveillance	
Croatia	Target species found dead or molting	720	0	0	X
Total	0	720	0	0	1 440
				Add a new row	

- (a) Refers to the place of collection of birds/samples. In case NUTS 2 (Nomenclature of Territorial Units for Statistics) can not be used, region as defined in the programme by the Member State is requested. Please fill-in these values directly in the field.
(b) General description of the wild birds are intended to be sampled in the framework of the active and passive surveillance.
(c) Voluntary, to be included for information purposes, not eligible for cofinancing.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

3.3 Sampling procedures and sampling periods

max 32000 chars.

Sampling will be carried out in accordance with the Diagnostic Manual. Samples from wild birds will be taken by skilled persons (mainly ornithologists) who are equipped for collection and transport of samples. The ornithologist shall determine the species and, if possible, the age and sex of each wild bird caught. At least 5 sick/dead wild birds (or all if number of sick or dead wild birds is lower than 5) found on a location must be adequately sampled for virological examination (molecular detection /RT-PCR/ followed by virus isolation in case of positives). In case adequate sampling can not be assured on the location, sick or dead wild birds must be collected as a whole and submitted to the AI laboratory. Cloacal and tracheal/oropharyngeal swabs and/or organs (brain, heart, lung, trachea, kidney and intestines) from wild birds found dead or moribund, must be taken.

An appropriately taken cloacal swab must be covered with a visible quantity of faeces. If available, swabs may be placed in an antibiotic or specific virus transport medium so that they are fully immersed. Regardless of whether the swabs are submitted in a transport medium or not, they must be chilled. If a transport medium is not available, the swab must be placed in a protective casing and submitted dry to the laboratory.

Samples must not be frozen unless absolutely necessary. If rapid transport (in transport medium at 4oC) is not guaranteed, the samples must be immediately frozen and then transported on dry ice to the laboratory. Samples must be submitted to Croatian Veterinary Institute; Poultry Centre; Heinzelova 55, Zagreb 10000 (Contact telephones: 01/2441 392; 2441 394; 2440 211) as soon as possible.

It is expected that majority of samples from dead or moribund wild birds will be taken during spring and in particular autumn migrations when birds are grouping but also during winter. During these periods of the year ornithologist are more frequently present on locations of interest.

3.4 Laboratory testing : description of the laboratory tests used

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

max 32000 chars.

Detection of AI viruses is carried out fully in accordance with the Council Directive 2005/94/EC and Diagnostic Manual for Avian Influenza (Official Gazette 99/2008). Both, classical and molecular pathways are used, and combined if needed. For molecular pathway, EU AI reference laboratory recommended Real Time PCR methods for detection of influenza A matrix gene, Eurasian H5 avian influenza, Eurasian H7 avian influenza and N1 AI gene detection are used. In addition, EU AI reference laboratory recommended One Step RTPCR for detection of H5 & H7 avian influenza & cleavage site sequencing protocols are used. Pathotyping of H5 and H7 positive samples is based on sequencing of HA-cleavage site and putative amino acid motif.

4. Description of the epidemiological situation of the disease in poultry during the last five years

max 32000 chars.

No evidence of HPAI viruses was observed in poultry during the last five years.
Information of results of testing of poultry for AI from 2008 to 2011 is attached to this document.

5. Description of the epidemiological situation of the disease in wild birds during the last five years

(max. 32000 chars.):

No evidence of HPAI viruses was observed in wild birds during the last five years.
Information of results of testing of AI in wild birds from 2008 to 2011 is attached to this document.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

The last occurrence of HPAI of H5N1 subtype was detected in wild birds in March 2006. Description of introduction and spread of avian influenza A (H5N1) subtype in Croatia including seventeen isolates identified during the period from October 2005 to March 2006, is provided in the paper (Savic et al, 2009) that will be sent by email SANCO-BO@ec.europa.eu.

6. Measures in place as regards the notification of the disease

(max. 32000 chars):

According to the Veterinary Act (Official Gazette No 41/2007, Articles 13 to 16) owner of the animals and any veterinarian is obliged to notify an infectious disease suspicion or a case. Disease notification procedures and forms are prescribed in details in the Ordinance on the notification of animal diseases (Official Gazette No 62/12, 114/12).

In case of notification of AI suspicion measures are applied in accordance with Ordinance on measures to control and eradicate avian influenza (Official Gazette No 131/06). This Ordinance is fully aligned with Council Directive 2005/94/EC of 20 December 2005 on Community measures for the control of avian influenza and repealing Directive 92/40/EEC; and the Ordinance on the diagnostic manual for avian influenza (Official Gazette No 99/08). This Croatian ordinance is fully aligned with Commission Decision 2006/437/EC of 4 August 2006 approving a Diagnostic manual for avian influenza as provided in Council Directive 2005/94/EC).

7. Costs

7.1 Detailed analysis of the costs

7.1.1 Poultry

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.2

(max. 32000 chars):

- Serological test: HI test for H5 and H7
- Number of samples per holding are calculated based on epidemiological unit.
10 samples are taken per epidemiological unit. Average number of epidemiological units per Laying hens is 2 and Chicken breeders holdings is 1,5 so sample size is increased by 2 and 1,5 times, respectively, on such holdings. According to the design and taking into account the number of epidemiological units it is expected that 3505 samples will be serologically tested within the frame of this Program.
 - It is assumed that up to 1% of samples might need to be further investigated due to positive serological test results. In such cases additional sampling for the purpose of serological and virological investigation on a holding concerned will be performed. For that reason additional 300 serological tests are included in the costs.
 - So overall expected number of serological tests to be carried out within the frame of this Program is 3805.

Virological tests

- RT PCR test: it is assumed that 1% of samples might need to be further investigated due to positive serological test results. In such cases additional sampling for the purpose of serological and virological investigation on a holding concerned will be performed.
For that reason 150 RT PCR tests, 20 virus isolation tests are included in the costs.

When calculating costs only costs eligible to be reimbursed and those applied in the Decision 2011/807 (for MS programmes in 2012) are considered.

7.1.2 Wild birds

(max. 32000 chars):

Virological testing

- Search for dead or moribund wild birds of target species will be carried out on 18 locations (specified under point 3.1.2).
It is assumed that on each location 40 dead or moribund wild birds will be found and submitted for laboratory investigation during the 2013. This will result with 720 wild birds to be sampled and 1440 samples (cloacal sample and tracheal or organ sample) to be virologically tested.
 - In addition 50 virus isolation tests are included in the costs.
- When calculating costs only costs eligible to be reimbursed and those applied in the Decision 2011/807 (for MS programmes in 2012) are considered.

10	0	268	13	0	386	2	0	30	712	4*	6021	2	0	65

* In six samples originating from three backyard holdings in the village of Draž (Osijek-baranja county), antibodies for H7 subtype of AI virus were found; furthermore antibodies for H7 subtype of AI virus were also found in one sample originating from one backyard holding in the village of Kraljeva Velika (Sisak-moslavina county). Due to above mentioned findings of antibodies for H7 subtype of AI virus, additional sampling (cloacal swabs) for virological testing was carried out in holdings in the village of Draž as well as Kraljeva Velika and its nearby village of Piljenice. Total of 139 samples were taken in 20 backyard holdings in the village of Draž while in the villages of Kraljeva Velika and Piljenice 1204 samples from 92 backyard holdings were taken. All samples are tested by rRT-PCR for M gene. Influenza virus type A was not detected in any of the samples tested.

ADDITIONAL INFORMATION: During the year 2007, in intensive poultry production (farms) 683 laying hens, 231 broilers, 263 ducks, 180 geese, 66 turkeys, 228 pheasants, 6 quails and 14 ostriches were tested. Also in extensive production (backyard poultry) 14563 laying hens, 871 pheasant, 566 turkeys i 534 geese were tested. In all tested samples no antibodies for H5 and H7 subtypes of AI virus were found.

* In 7 samples originating from six backyard holdings in the village of Narta (Bjelovar-bilogora county) antibodies for H7 subtype of AI virus were found. In 1 sample originating from another backyard holding from the same village, antibodies for H5 were found. Furthermore, antibodies for H7 subtype of AI virus were also found in 5 samples originating from three backyard holdings in the village of Zokov Gaj (Virovitica-podravina county). Due to above mentioned findings of antibodies for H5 and H7 subtypes of AI virus, additional sampling (cloacal and tracheal swabs) for virological testing was carried out in holdings in the village of Narta (Bjelovar-bilogora county), Zokov gaj (Virovitica-podravina county), Ribnjak (Osijek-baranja county) and Piljenice and Kraljeva Velika (Sisak-moslavina county). A total of 88 cloacal swabs were taken in 5 backyard holdings in the village of Narta, 796 cloacal and 796 tracheal swabs in 25 backyard holdings in the village of Zokov Gaj, 70 cloacal and 70 tracheal swabs in 7 backyard holdings in the village of Ribnjak, 300 cloacal swabs in 29 backyard holdings in the village of Piljenice and 187 cloacal and 187 tracheal swabs in 20 backyard holdings in the village of Kraljeva Velika. All samples are tested by rRT-PCR for M gene. Influenza virus type A was not detected in any of the samples tested.

ADDITIONAL INFORMATION: During the year 2008, 40 dead domestic poultry were tested for presence of AI virus within the passive monitoring. All samples were tested by virus isolation in embryonated hen eggs. Influenza virus type A was not detected in any of the samples tested.

* Three serum samples from backyard in village Batina and one serum sample from a backyard in village Draž (both from Osjek-baranja county) sampled in April 2010 were found positive for H7 subtype of AI antibodies. Furthermore eight serum samples from the same backyard in Batina and one serum sample from the same backyard flock in Draž were tested positive in September 2010 for H7 subtype of AI antibodies. One serum sample from a backyard in village Zokov Gaj (Virovitica-podravina county) sampled in May 2010 was positive for H5 subtype of AI antibodies and also two serum samples from the same backyard in Zokov Gaj sampled in November 2010 were tested positive for H5 subtype of AI antibodies. In addition three serum samples, from three backyards in Veliko Svinjičko village (Sisak-moslavina county) sampled in May 2010 were tested positive for H7 subtype of AI antibodies. In reference with these findings additional testing of 4180 backyard poultry from the above mentioned villages was carried out. Results of the additional testing are shown in the Table below.

Table 2

Virological testing for AI in villages where H5/H7 seropositive backyard poultry was found

Table 1: Report of surveillance for AI in poultry in Croatia in 2011

	Poultry category																		
	Chicken breeders			Laying hens			Broilers			Backyard poultry			Ducks			Turkeys			
	Number of farms	Number of positive farms	Number of blood samples tested	Number of farms	Number of positive farms	Number of blood samples tested	Number of farms	Number of positive farms	Number of blood samples tested	Number of holdings	Number of positive holdings	Number of blood samples tested	Number of farms	Number of positive farms	Number of blood samples tested	Number of farms	Number of positive farms	Number of blood samples tested	
First half	19	0	548	47	0	867	2	0	38	1236	4	12028	1	0	50	0	0	0	Total No. of samples tested
Second half	22	0	708	57	0	1258	3	0	48	1295	2	12382	1	0	50	3	0	27	
Samples/year	1256		2125		86		22410		100		27		26004						

Two serum samples, each from a different backyard in Zokov Gaj (Virovitičko-podravska County) sampled in May 2011 were positive for H5 subtype of AI antibodies.

Three serum samples from two different backyards in Veliko Svinjčko (Sisačko-moslavačka County) sampled in May 2011 were positive for H7 subtype of AI antibodies.

A serum sample from backyard poultry in Bapska and seven serum samples from one backyard poultry holding in Opatovac (both from Vukovarsko-srijemska County) sampled in September 2011 were positive for H7 subtype of AI antibodies.

Subsequently 1923 poultry from the seropositive villages were sampled and tested for presence of the virus as shown in the table below.

Table 2 - 2011

Virological testing for AI in villages where H5/H7 seropositive backyard poultry was found								
Village(s)	Sampling time	Number of poultry sampled	Number of cloacal swabs	Nuber of tracheal swabs	Total number of samples	AI positive (M gene rRT-PCR)	H5 positive (H5 gene rRT-PCR)	H7 positive (H7 gene rRT-PCR)
Veliko Svinjčko	6. June 2011	270	270	270	540	0	0	0
Zokov Gaj	8-10. June 2011	624	624	624	1248	0	0	0
Opatovac	29. Sept. 2011	372	372	372	744	0	0	0
Bapska	4-7. Oct. 2011	657	657	657	1314	0	0	0
Total		1923	1923	1923	3846	0	0	0

AVIAN INFLUENZA

**SAMPLING FORM AND FORM TO COLLECT INFORMATION WILD BIRDS FOUND
DEAD OR MORIBUND AT THE SITE
ON THE DAY OF SAMPLING**

Date of sampling:/...../.....

Reference number of the Form(s) under which the samples have been sent for testing:.....

Name of the site/location:.....

Address:.....

Place.....Municipality.....

County.....

1. TYPE OF SAMPLE

Cloacal swab

Tracheal/ oropharyngeal swab

Faeces

Organs (brain, heart, lung, kidney, piece of intestine)

2. WILD BIRD SPECIES FROM WHICH SAMPLES HAVE BEEN TAKEN

List 1: Higher risk species of wild birds

LATIN NAME	CROATIAN NAME (English name)	Number of birds sampled	Age or age category
<i>podicipediformes gnjurci</i>			
<i>Podiceps cristatus</i>	Ćubasti gnjurac (Great Crested Grebe)		
<i>Tachybaptus ruficollis</i>	Mali gnjurac (Little Grebe)		
<i>anseriformes guščarice</i>			
<i>Anser brachyrhynchus</i>	Kratkokljuna guska (Pink-footed Goose)		
<i>Anser erythropus</i>	Mala guska (Lesser White-fronted Goose)		
<i>Branta leucopsis</i>	Bjelolica guska (Barnacle Goose)		
<i>Branta bernicla</i>	Grivasta guska (Brent Goose)		
<i>Branta ruficollis</i>	Crvenovrata guska (Red-breasted Goose)		
<i>Branta canadensis</i>	Kanadska guska (Canada Goose)		
<i>Marmaronetta angustirostris</i>	Pjegava patka (Marbled Teal)		
<i>Cygnus olor</i>	Crvenokljuni labud (Mute Swan)		
<i>Cygnus cygnus</i>	Žutokljuni labud (Whooper Swan)		
<i>Cygnus columbianus</i>	Mali labud (Bewick's Swan)		
<i>Anser fabalis</i>	Guska glogovnjača (Bean Goose)		
<i>Anser albifrons albifrons</i>	Lisasta guska (Greater White-fronted Goose)		
<i>Anser anser</i>	Siva guska (Greylag Goose)		
<i>Anas penelope</i>	Zviždara (Eurasian Wigeon)		
<i>Anas crecca</i>	Kržulja (Common Teal)		
<i>Anas clypeata</i>	Patka žličarka (Northern Shoveler)		
<i>Anas acuta</i>	Patka lastarka (Northern Pintail)		
<i>Anas platyrhinchos</i>	Divlja patka (Mallard)		
<i>Anas querquedula</i>	Patka pupčanica (Garganey)		
<i>Aythya nyroca</i>	Patka njorka (Ferruginous Duck)		
<i>Aythya ferina</i>	Glavata patka (Common Pochard)		
<i>Aythya fuligula</i>	Krunata patka (Tufted Duck)		
<i>Netta rufina</i>	Patka gogoljica (Red-crested Pochard)		

<i>gruiformes ždralovke</i>			
<i>Rallus aquaticus</i>	Kokošica (Water Rail)		
<i>Porzana porzana</i>	Riđa štijoka (Spotted Crake)		
<i>Porzana parva</i>	Siva štijoka (Little Crake)		
<i>Gallinula chloropus</i>	Mlakuša (Moorhen)		
<i>Fulica atra</i>	Liska (Common Coot)		
<i>charadriformes šljukarice</i>			
<i>Vanellus vanellus</i>	Vivak (Northern Lapwing)		
<i>Pluvialis apricaria</i>	Troprsti zlatar (Eurasian Golden Plover)		
<i>Limosa limosa</i>	Crnorepa muljača (Black-tailed Godwit)		
<i>Philomachus pugnax</i>	Pršljivac (Ruff)		
<i>Larus canus</i>	Burni galeb (Common Gull)		
<i>Larus ribibundus</i>	Riječni galeb (Black-headed Gull)		
<i>Larus michahellis</i>	Galeb klaukavac (Yellow-legged Gull)		
<i>Larus minutus</i>	Mali galeb (Little Gull)		
<i>Larus cachinnans</i>	Pontski galeb (Caspian Gull)		

Bird species living in proximity to domestic poultry and having a high probability of coming in contact with domestic poultry:

List 2.1: Bird species intimately associated with poultry production in Europe

LATIN NAME	CROATIAN NAME (English name)	Probability of contact with domestic poultry	Number of birds sampled	Age or age category
<i>Anser anser domesticus</i>	Domaća guska (Domestic Goose)	High		
<i>Anas platyrhinchos</i>	domestificirana Divlja patka (Domestic Mallard)	High		
<i>Cairina moschata</i>	Mošusna patka (Domestic Muscovy Duck)	High		
<i>Columba livia</i>	Divlji golub (Feral Pigeon)	High		
<i>Passer domesticus</i>	Vrabac (House Sparrow)	High		

List 2.2: Species of wild birds which may come in contact with domestic poultry

LATIN NAME	CROATIAN NAME (English name)	Probability of contact with domestic poultry	Number of birds sampled	Age or age category
<i>Pluvialis apricaria</i>	Troprsti žalar (Eurasian Golden Plover)	Low		
<i>Vanellus vanellus</i>	Vivak (Northern Lapwing)	Medium		
<i>Larus ridibundus</i>	Riječni galeb (Black- headed Gull)	High		
<i>Larus canus</i>	Burni galeb (Common Gull)	High		
<i>Larus argentatus</i>	Srebrnasti galeb (Herring Gull)	Low		
<i>Columba palumbus</i>	Golub grivnjaš (Wood Pigeon)	High		
<i>Streptopelia decaocto</i>	Gugutka (Eurasian Collared Dove)	High		
<i>Phasianus colchicus</i>	Fazan (Ring-necked Pheasant)	High		
<i>Alauda & Galerida spp</i>	ševe (Larks species)	Low		
<i>Oenanthe spp</i>	trepteljke (Wheatears)	Low		
<i>Motacilla spp</i>	pastirice (Wagtails)	Medium		
<i>Turdus pilaris</i>	Drozd bravenjak (Fieldfare)	Medium		
<i>Turdus iliacus</i>	Mali drozd (Redwing)	Medium		

<i>Pica pica</i>	Svraka (Black-billed Magpie)	High
<i>Corvus monedula</i>	Čavka (Eurasian Jackdaw)	High
<i>Corvus frugilegus</i>	Gačac (Rook)	Medium
<i>Corvus corone cornix</i>	Siva vrana (Carriion Crow)	Medium
<i>Corvus corax</i>	Gavran (Raven)	Low
<i>Sturnus vulgaris</i>	Čvorak (Starling)	High
<i>Sturnus unicolor</i>	Crni čvorak (Spotless Starling)	High
<i>Passer domesticus</i>	Vrabac (House Sparrow)	High
<i>Passer montanus</i>	Poljski vrabac (Eurasian Tree Sparrow)	High
<i>fringillidae</i>	zebovke (Finches)	Medium
<i>Miliaria, Emberiza spp</i>	strnadice (Buntings)	Medium

List 2.3: Species of wild birds which may come in contact with domestic poultry in water areas

LATIN NAME	CROATIAN NAME (English name)	Probability of contact with domestic poultry	Number of birds sampled	Age or age category
<i>Egretta spp.</i>	čaplje(Siva i danguba) (Egrets)	Low		
<i>Ardea</i> and other spp.	čaplje(Bijela i Mala bijela) (Herons)	Medium		
<i>Phalacrocorax carbo</i>	Veliki vranac (Cormorant)	Medium		
<i>Ciconia</i> spp.	rode (Storks)	Low		
<i>Cygnus olor</i>	Crvenokljuni labud (Mute Swan)	Medium		
<i>Anser anser</i>	Siva guska (Greylag Goose)	Medium		
<i>Branta canadensis</i>	Kanadska guska (Canada Goose)	Low		
<i>Anas & Aythya</i> spp.	patke (Ducks)	Low		
<i>Anas platyrhynchos</i>	Divlja patka (Mallard)	High		
<i>Fulica atra</i>	Liska (Common Coot)	Medium		
<i>Gallinula chloropus</i>	Mlakuša (Moorhen)	Medium		

3. ESTIMATED NUMBER OF WILD BIRDS AT THE SITE AT THE TIME OF SAMPLING

LATIN NAME	CROATIAN NAME (English name)	ESTIMATED NUMBER OF BIRDS AT THE SAMPLING SITE
<i>podicipediformes gnjurci</i>		
<i>Podiceps cristatus</i>	Ćubasti gnjurac (Great Crested Grebe)	
<i>Tachybaptus ruficollis</i>	Mali gnjurac (Little Grebe)	
 <i>anseriformes guščarice</i>		
<i>Anser brachyrhynchus</i>	Kratkokljuna guska (Pink-footed Goose)	
<i>Anser erythropus</i>	Mala guska (Lesser White-fronted Goose)	
<i>Branta leucopsis</i>	Bjelolica guska (Barnacle Goose)	
<i>Branta bernicla</i>	Grivasta guska (Brent Goose)	
<i>Branta ruficollis</i>	Crvenovrata guska (Red-breasted Goose)	
<i>Branta canadensis</i>	Kanadska guska (Canada Goose)	
<i>Marmaronetta angustirostris</i>	Pjegava patka (Marbled Teal)	
<i>Cygnus olor</i>	Crvenokljuni labud (Mute Swan)	
<i>Cygnus cygnus</i>	Žutokljuni labud (Whooper Swan)	
<i>Cygnus columbianus</i>	Mali labud (Bewick's Swan)	
<i>Anser fabalis</i>	Guska glogovnjača (Bean Goose)	
<i>Anser albifrons albifrons</i>	Lisasta guska (Greater White-fronted Goose)	
<i>Anser anser</i>	Siva guska (Greylag Goose)	
<i>Anas penelope</i>	Zviždara (Eurasian Wigeon)	
<i>Anas crecca</i>	Kržulja (Common Teal)	
<i>Anas clypeata</i>	Patka žličarka (Northern Shoveler)	
<i>Anas acuta</i>	Patka lastarka (Northern Pintail)	
<i>Anas platyrhinchos</i>	Divilja patka (Mallard)	
<i>Anas querquedula</i>	Patka pupčanica (Garganey)	
<i>Aythya nyroca</i>	Patka njorka (Ferruginous Duck)	
<i>Aythya ferina</i>	Glavata patka (Common Pochard)	
<i>Aythya fuligula</i>	Krunata patka (Tufted Duck)	
<i>Netta rufina</i>	Patka gogoljica (Red-crested Pochard)	

gruiformes ždralovke	
<i>Rallus aquaticus</i>	Kokošica (Water Rail)
<i>Porzana porzana</i>	Riđa štijoka (Spotted Crake)
<i>Porzana parva</i>	Siva štijoka (Little Crake)
<i>Gallinula chloropus</i>	Mlakuša (Moorhen)
<i>Fulica atra</i>	Liska (Common Coot)

charadriformes šljukarice	
<i>Vanellus vanellus</i>	Vivak (Northern Lapwing)
<i>Pluvialis apricaria</i>	Troprsti zlatar (Eurasian Golden Plover)
<i>Limosa limosa</i>	Crnorepa muljača (Black-tailed Godwit)
<i>Philomachus pugnax</i>	Pršljivac (Ruff)
<i>Larus canus</i>	Burni galeb (Common Gull)
<i>Larus ribibundus</i>	Riječni galeb (Black-headed Gull)
<i>Larus michahellis</i>	Galeb klaukavac (Yellow-legged Gull)
<i>Larus minutus</i>	Mali galeb (Little Gull)
<i>Larus cachinnans</i>	Pontski galeb (Caspian Gull)

4. COMMERCIAL DOMESTIC POULTRY PRODUCTION FACILITIES LOCATED WITHIN A 10-KILOMETER RADIUS AROUND THE WILD BIRD SAMPLE COLLECTION SITE

NAME OF THE FACILITY	DISTANCE
----------------------	----------

1. _____
 2. _____
 3. _____
 4. _____
 5. _____
 6. _____
 7. _____

8. _____

9. _____

5. THE METHOD OF KEEPING THE POULTRY REFERRED TO IN ITEM 4

Poultry house: YES / NO Authorisation number

Standardised poultry house: YES / NO

Ventilation system in poultry houses referred to in item 4:

- Natural
- Natural with forced (mechanical) ventilation
- Artificial (exclusively mechanical ventilation)

Poultry free-range system (open-air runs for poultry): YES / NO m².....

Protective nets preventing the entry of wild birds: YES / NO

Possibility of contact with wild birds: YES / NO

6. DATA ON MORTALITY AND MORBIDITY OF WILD BIRDS AT THE LOCATION

1. There has been an unusually large number of deaths among wild birds in the last three months YES / NO
2. Approximate number of wild birds that have died (if any) _____
3. Birds found dead were sent for laboratory testing: YES / NO
4. Name of the laboratory to which the birds were sent for testing:

7. PIG FARMS

There is a pig farm in proximity to the sample collection site: YES / NO

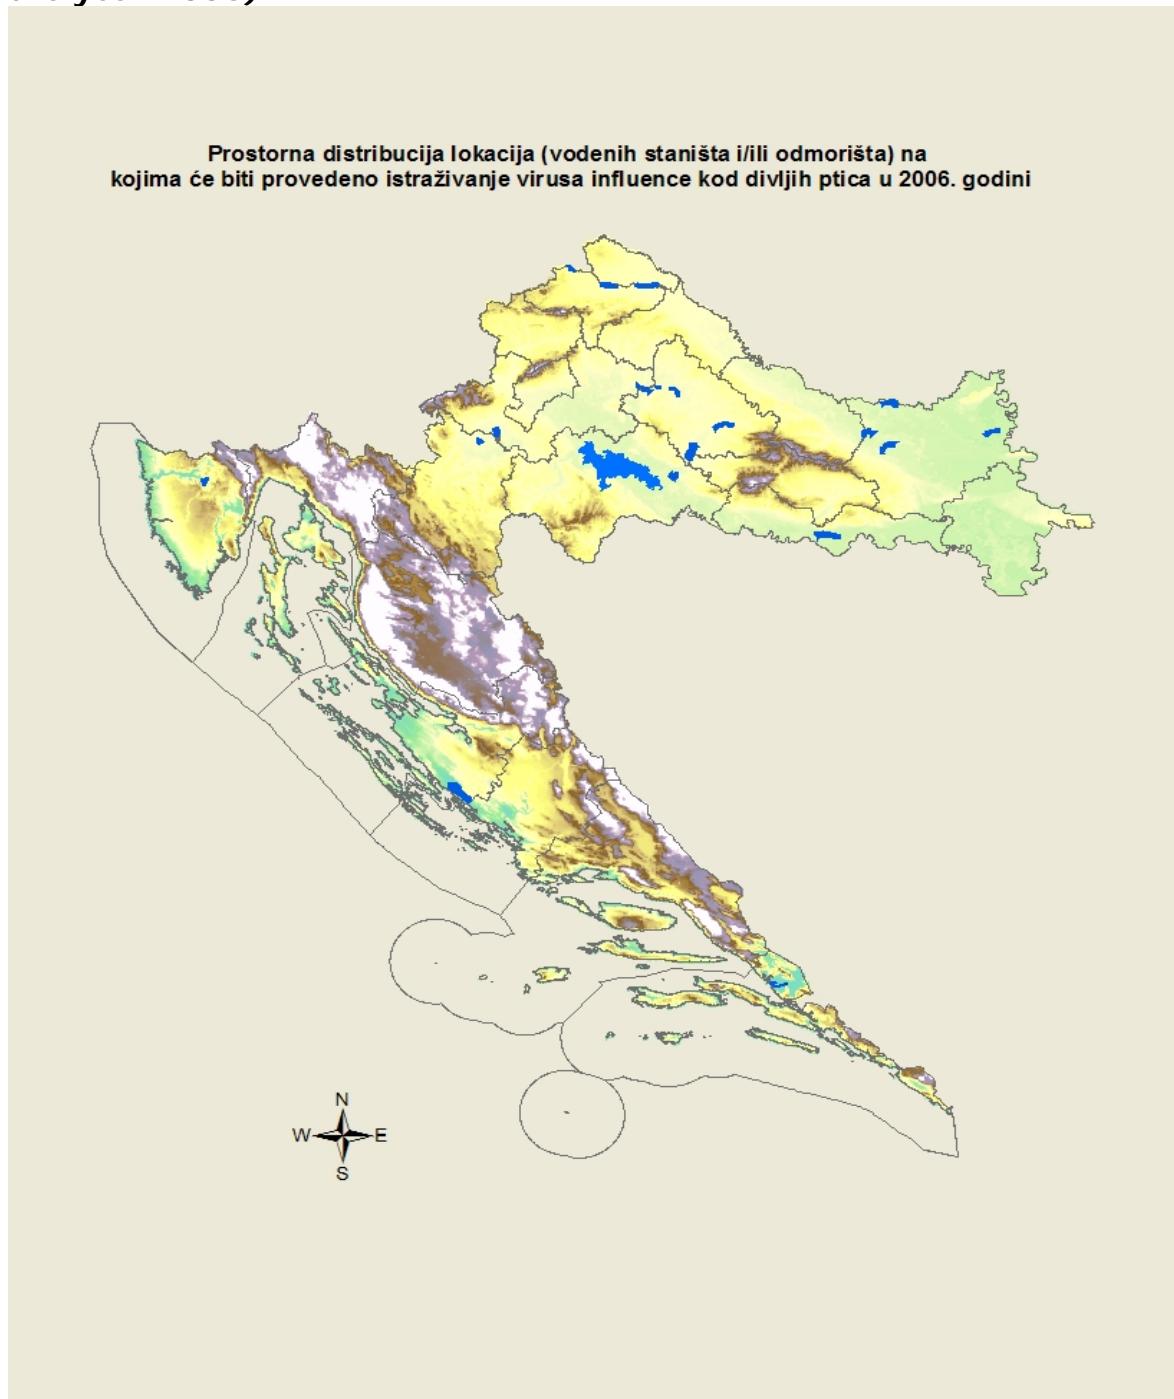

Name of the person who took the samples and
collected data on the samples:

Signature of the authorised / official
veterinarian:

Authorisation number _____

Date of submission of the samples to the authorised
laboratory
(Poultry Centre of the CVI):

Map 1: Spatial distribution of locations/sites at which the 2013 passive surveillance for avian influenza in wild birds will be conducted (the same locations are included in AI surveillance from the year 2006)

Avian influenza - SAMPLE SUBMISSION FORM

Date of sampling:	Name of the facility:	
Poultry keeper:	Address:	Telephone:
Place:	Municipality:	County:
Poultry owner:	Address:	Telephone:
Veterinarian who took the samples:	Type of holding: in housing / free-range / backyard flocks	
Veterinarian submitting the samples to the CVI	Date of submission	
Authorised veterinary organisation:	Telephone:	

Type of production: laying hens ; free range laying hens ; chicken breeders ; turkeys breeders ; fattening turkey ; ducks ; geese ; ostriches ; farmed game birds (pheasants, partridges and quails) other (specify) _____

Number of sub-units (from which the sampled poultry originate): _____

Purpose of sampling (tick as appropriate):

- Active surveillance (under the 2013 Programme)
- First suspicion of AI in this area New suspicion of AI in the protection/surveillance zone
- Sampling of poultry at the time of killing Sampling of poultry at the time of slaughter
- Sampling of poultry before their removal/sending for emergency slaughter
- Sampling before the lifting restrictions Sampling of sentinel poultry
- Other (please specify) _____

SAMPLE IDENTIFICATION							
No.	Sample identification mark	Poultry species	Poultry category	No.	Sample identification mark	Poultry species	Poultry category
1.				11.
