The analysis of the information which were sent by the regional veterinary officers concerning the main infringements detected during the inspections of means of transport shows that the most discrepancies concerns **construction and technical condition of mean of transport.**

The following group of important deficiencies constitutes **exceeding the time of transport, including the lack of the rest in control point.**

The third group of infringements concerns **fitness for transport.**

The infringements shown in the rows “Other” and “Other concerning the documentation” are not related very closely to the animal welfare e.g. lack of information on the vehicle about carrying the live animals, the lack of the evidence of disinfection, the problems with health certificates or TRACES notifications.

The action plan to correct the main infringements detected during inspections carried out in 2011 in the field of the protection of animals during transport.

The Chief Veterinary Officer in co - operation with French experts will organize in September 2012 the training for the district and regional inspectors concerning the main problems identified during the transport of live animals.
