

EUROPEAN COMMISSION
HEALTH AND CONSUMERS DIRECTORATE-GENERAL

Director General

SANCO/10213/2014

*Programmes for the eradication, control and monitoring of certain
animal diseases and zoonoses*

Survey programme for Avian Influenza

Cyprus

Approved* for 2014 by Commission Decision 2013/722/EU

* in accordance with Council Decision 2009/470/EC

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

PROGRAMME for ERADICATION : ANNEX IV

Member States seeking a financial contribution from the Community for national programmes for the control and monitoring of avian influenza in poultry and wild birds shall submit applications containing at least the information set out in this form.

The central data base keeps all submissions. However only the information in the last submission is shown when viewing and used when processing the data.

If encountering difficulties, please contact SANCO-BO@ec.europa.eu

Instructions to complete the form:

1) In order to fill in and submit this form you must have at least the

Adobe Reader version 8.1.3

or higher otherwise you will not be able to use the form.

Your version of Acrobat is : **10.104**

2) Please provide as much information as possible, in addition to those required by fields marked with an asterisk (*) which are mandatory. Should you need clarifications on some of the information requested, please contact SANCO-BO@ec.europa.eu.

3) To verify your data entry while filling your form, you can use the "verify form" button at the top of each page.

4) When you have finished filling the form, verify that your internet connection is active and then click on the submit notification button below. If the form is properly filled, the notification will be submitted to the server and a Submission number will appear in the corresponding field.

5) **IMPORTANT:** Once you have received the Submission number, save the form on your computer.

6) If the form is not properly filled, an alert box will appear indicating the number of incorrect fields. Please check your form again and try to re-submit it according to steps 4), 5) and 6). Should you still have any difficulties, please contact SANCO-BO@ec.europa.eu.

IMPORTANT: AFTER SUBMITTING THE FORM DO NOT FORGET TO SAVE IT ON YOUR COMPUTER FOR YOUR RECORDS!

Thursday, April 04, 2013 14:54:34

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

1. Identification of the programme

Member state : KYPROS

Disease : avian influenza in poultry and wild birds

Request of Union co-financing
for the period :

FROM

2014

TO

2014

1.1 Contact

Name : MICHALIS COSTOULLOS

Phone : +357 22805180

Fax. : +357 22805176

Email : mcostoulllos@vs.moa.gov.cy

2. Description and implementation of the surveillance programme in poultry

2.1.1 Designation of the central authority in charge of supervising and coordinating the departments responsible for implementing the programme

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

(max. 32000 chars) :

The Veterinary Services of the Ministry of Agriculture Environment and Natural Recourses are responsible for the implementation of the control program of Avian Influenza .
Within the Veterinary Services, the Animal Health and Welfare Division is responsible for the coordination and supervision of the programme. The five District Veterinary Offices with the five Rural Veterinary Stations are responsible for the collection and transport of samples to the Veterinary Services' Laboratories.

2.1.2 System in place for the registration of holdings

(max. 32000 chars) :

BREEDING FLOCKS

The central authority has registered officially all holdings with breeding flocks according to K.Δ.Π. 317/2002, which transfers Directive 90/539/EEC into Cyprus national law.

LAYING FARMS

The central authority has registered officially all holdings with layer flocks according to K.Δ.Π. 761/2003, which transfers Directives 1999/74/EC and 2002/4/EC into Cyprus national law. According to this all laying hen holdings of more than 350 laying hens should be registered with the Veterinary Services. Packing centres are registered according to Cyprus national law N. 276(I)2004.

BROILER FARMS

There is no legal basis for the registration of broiler farms. However the Veterinary Services keep a database with the broiler farms.

TURKEYS

There are no turkey breeding flocks in Cyprus. Day-old chicks are imported from Member States to broiler farms for fattening and slaughter for the period of Christmas.

2.1.3 Design (risk based or surveillance based on representative sampling)

(max. 32000 chars) :

The surveillance programme is based on Representative Sampling, according to Tables 1 and 2 of Annex I to Commission Decision 2010/367/EU.
Due to the small number of holdings in each poultry category, all poultry holdings will be tested in the framework of the surveillance programme.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

2.1.3.1 Short description of predominant poultry population and types of poultry production

(max. 32000 chars) :

BREEDING FLOCKS GALLUS GALLUS

In Cyprus there are only 4 breeding companies which have in total 16 breeding holdings and 4 hatcheries. Out of the 16 breeding holdings, 14 house parent stock for broilers and 2 for layers. There are in total 52 sheds housing parent stock for broilers and 2 sheds housing parent stock for layers.

LAYING FLOCKS GALLUS GALLUS

There are 23 conventional laying hen holdings with 50 sheds and 13 free range and organic laying holdings with 22 sheds.

BROILER FLOCKS GALLUS GALLUS

There are 106 broiler farms out of which only one is free range broiler farm.

2.1.3.2 Criteria and risk factors for risk based surveillance⁽¹⁾

(max. 32000 chars) :

The surveillance programme is based on Representative Sampling, according to Tables 1 and 2 of Annex I to Commission Decision 2010/367/EU.

Due to the small number of holdings in each poultry category, all poultry holdings will be tested in the framework of the surveillance programme.

- (1) Including maps showing target sampling sites identified as being particularly at risk for the introduction of avian influenza virus, taking into account criteria set out in point 4 of Annex I to Commission Decision 2010/367/EC.

2.2 Target populations ⁽²⁾

(max. 32000 chars) :

The programme will be implemented from 1st January 2014 until 31 December 2014.

All samples are to be tested in the NRL of Cyprus and in case of positive results, samples will be sent to the CRL for confirmation.

Samples are to be taken from chickens (breeding hens, laying hens and free range broilers), fattening turkeys, quails, partridges, pigeons and backyard poultry according to Commission Decision 2010/367/EC.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

Sampling

Blood sampling for serological examination will be collected from 10 birds (except quails) per holding or in cases of holdings consisting of more than one shed from 5 birds per shed. Blood samples from chickens (breeding hens, laying hens and free range broilers), fattening turkeys, partridges and backyard poultry will be collected on the farm. Blood samples from quails and pigeons will be collected at the slaughterhouse.

All holdings of each species will be included in the sampling frame for serological examination.

Sampling scheme in breeding flocks

All parent stock is imported to Cyprus as day-old chicks. There are 4 breeding owners, who own in total 16 approved breeding holdings, of which 11 holdings house rearing and adult breeding flocks, 1 holding houses exclusively rearing breeding flocks and 4 holdings are hatcheries. Day-old chicks are sold to laying hen or broiler farms within Cyprus. A total of 36 sheds exist. Day-old chicks are sold to laying hen or broiler farms within Cyprus. The samples that will be collected from breeding flocks are 170.

Sampling scheme in broilers

There is one free range broiler farm, which will be included in the sampling frame for the surveillance on Avian Influenza. Surveillance in that farm will consist of 10 samples every three months, a total of 40 samples.

Sampling scheme in layers

There are 23 conventional laying hen holdings with 50 sheds. Ten blood samples will be collected from holdings having one shed and five blood samples per shed in holding with more than one shed. The total number of blood samples to be collected from conventional layer farms is 290 samples

There are 13 free range and organic laying holdings with 22 sheds. Surveillance on those farms will consist of 5 blood samples per shed or 10 blood samples in case of a holdings having one shed collected every three months, a total number of 620 samples.

Sampling scheme in turkey holdings

There are no breeding farms for turkeys in Cyprus. There are 8 holdings for fattening turkeys either on a yearly or a seasonal basis, from September to December for slaughter for Christmas. There are 6 holding with only 1 shed, 1 holding with 4 sheds and 1 holding with 5 sheds. The total number of blood samples to be collected from turkeys is $6 \times 1 \times 10 = 60$ samples + $1 \times 4 \times 5 = 20$ samples + $1 \times 5 \times 5 = 25$ samples = 105 samples.

Sampling scheme in partridges

There are 5 holdings for partridges with an average of 2 sheds per holding. Therefore the total number of blood samples to be collected from partridges will be $2 \times 5 \times 5 = 50$ samples.

Sampling scheme for pigeons.

There are no pigeon holdings. In case new pigeon holdings are introduced, 10 blood samples will be taken from each holding.

Sampling scheme for quails:

There are three quail holdings. 15 blood samples will be taken every 3 months, a total of 180 samples.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

Sampling scheme in backyard poultry

Blood samples from backyard poultry will be collected from high risk areas in Cyprus (200 blood samples to be tested).

(2) including MS specific exceptional circumstances as described in Annex I point 3 of Commission Decision 2010/367/EU)

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

2.2.1 POULTRY HOLDINGS ^(a) (except ducks, geese and farmed game birds (waterfowl e.g. mallards) to be sampled

Serological investigation according to Annex I to Commission Decision 2010/367/EU

In case of multiannual programme, please provide targets on annual basis.
If your targets differ between different implementation years please provide separate tables per year in attachment.

2.3 Sampling procedures, sampling periods and frequency of testing

(max. 32000 chars) :

Breeding holdings, conventional laying hen holdings, fattening turkey holdings, partridge holdings, pigeon holdings, quail holding, backyard holdings and zoo and imported companion birds will be tested once a year and sampling for those categories will take place throughout the year.

Free range, organic laying hen holdings, the free range broiler holding and the quail holding will be tested every three months.

2.4 Laboratory testing : description of the laboratory tests used and follow up investigations

Description of the used serological tests : (max 32000 chars)

According to Chapter VIII of the Annex to Commission Decision 2006/437/EC.

Individual serum samples from are tested for their ability to inhibit influenza virus haemagglutinating antigen (H5&H7 subtypes) in standard haemagglutination inhibition tests as defined in below.

Haemagglutination inhibition (HI) test Reagents

1. Phosphate buffer solution (PBS).
2. Virus containing allantoic fluid diluted with PBS to contain 4 or 8 HAU per 0,025 ml.
3. 1 % chicken RBCs.
4. Negative control chicken serum.
5. Positive control serum.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

Procedure

1. Dispense 0,025 ml PBS into all wells of a plastic microtitre plate (with V-bottomed wells).
2. Place 0,025 ml of serum into first well of plate.
3. Use microtitration diluter to make two-fold dilutions of serum across plate.
4. Add 0,025 ml of diluted allantoic fluid containing 4 or 8 HAU.
5. Mix by tapping and place plate at 4o C for a minimum of 60 minutes or room temperature for a minimum of 30 minutes.
6. Add 0,025 ml 1 % RBCs to all wells.
7. Mix by gentle tapping and place at 4o C.
8. Plates are read after 30-40 minutes when control RBCs are settled. This is done by tilting and observing the presence or absence of tear-shaped streaming at the same rate as control wells containing RBCs (0,025 ml and PBS (0,05 ml) only.
9. The HI titre is the highest dilution of antiserum causing complete inhibition of four or eight units of virus (an HA titration to confirm the presence of the required HAU should be included in each test).
10. The validity of the results is dependent on obtaining a titre of less than 2^3 for 4 HAU or 2^2 for 8 HAU with a negative control serum and a titre of within one dilution of the known titre of the positive control serum.

3. Description and implementation of the surveillance programme in wild birds

- 3.1.1 Designation of the central authority in charge of supervising and coordinating the departments responsible for implementing the programme and relevant collaborating partners (e.g. epidemiologists, ornithologists, nature bird observation and hunter organisations).

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

(max. 32000 chars) :

In Cyprus there are no stations for capturing and ringing of wild birds. Faecal samples from high risk areas for active surveillance will be collected by the Veterinary personnel at the District Veterinary Offices. Game fund is a governmental service that cooperates with veterinary services and provides dead or injured wild birds that can be sampled for the A.I. surveillance program. All samples are to be tested in the NRL of Cyprus and in case of positive results, samples will be sent to the EURL for confirmation.

3.1.2 Description and delimitation of the geographical and administrative areas in which the programme is to be applied

(max. 32000 chars) :

Samples for virus isolation will be collected from wild birds in high risk areas.

Game fund is a governmental service that cooperates with veterinary services and provides dead or injured wild birds that can be sampled for the A.I. surveillance program. The samples will be either a) oropharyngeal and/or cloacal swabs from injured birds, or b) faeces, cloacal swabs, tracheal/ oropharyngeal swabs or tissues (brain, heart, lung, kidney and intestines) from dead birds.

It must be noted that the presence in Cyprus of birds listed in part 2 of Annex II of Commission Decision 2010/367/EC depends mainly on the weather conditions in the island during the winter. It can not be ensured that samples from all the species of these wild birds will be collected. It must also be noted that according to the Game Fund's data the Bean Goose (*Anser fabalis*) does not pass from Cyprus.

Active surveillance

In Cyprus there are no stations for capturing and ringing of wild birds and therefore the number of live birds submitted for testing is expected to be limited. Active surveillance will consist of faecal samples collected between October and February from high risk areas such as Achna dam and salt lakes in Larnaca and Acrotiri. During the rest of the year the temperatures in Cyprus are high and faecal samples get dry fast and are not appropriate for testing. Two pooled faecal samples will be collected per high risk area every month between October and February. Therefore, during the five month period we expect to collect and test $2*5*3=30$ samples. However, based on the experience of the previous year, in case the draught continues migration of birds might be low and it might not be possible to collect all those samples.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

Passive surveillance

Birds found dead or injured in high risk areas will be collected and examined for AI virus. Based on the experience of previous years, it is expected to examine around 150 samples from approximately 250 birds.

3.1.3 Estimation of the local and/or migratory wildlife population

(max. 32000 chars) :

Monitoring of local and migratory wildlife population is performed by the Game Fund. According to its reports the number of migratory birds during 2007-2008 is considerably lower compared to previous years, due to the continuous draught in the area. However, the number of some species of wild migratory birds increased during 2009, whereas the number of other remained low as the previous years. In general the number of migratory wild birds depends on the weather conditions each year.

3.2 Design, criteria, risk factors and target population(3)

(max. 32000 chars) :

Samples for virus isolation will be collected from wild birds in high risk areas.

Game fund is a governmental service that cooperates with veterinary services and provides dead or injured wild birds that can be sampled for the A.I. surveillance program. The samples will be either a) oropharyngeal and/or cloacal swabs from injured birds, or b) faeces, cloacal swabs, tracheal/ oropharyngeal swabs or tissues (brain, heart, lung, kidney and intestines) from dead birds.

It must be noted that the presence in Cyprus of birds listed in part 2 of Annex II of Commission Decision 2010/367/EC depends mainly on the weather

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

conditions in the island during the winter. It can not be ensured that samples from all the species of these wild birds will be collected. It must also be noted that according to the Game Fund's data the Bean Goose (*Anser fabalis*) does not pass from Cyprus.

Active surveillance

In Cyprus there are no stations for capturing and ringing of wild birds and therefore the number of live birds submitted for testing is expected to be limited. Active surveillance will consist of faecal samples collected between October and February from high risk areas such as Achna dam and salt lakes in Larnaca and Acrotiri. During the rest of the year the temperatures in Cyprus are high and faecal samples get dry fast and are not appropriate for testing. Two pooled faecal samples will be collected per high risk area every month between October and February. Therefore, during the five month period we expect to collect and test $2*5*3=30$ samples. However, based on the experience of the previous year, in case the draught continues migration of birds might be low and it might not be possible to collect all those samples.

Passive surveillance

Birds found dead or injured in high risk areas will be collected and examined for AI virus. Based on the experience of previous years, it is expected to examine around 150 samples from approximately 150 birds.

- (3) *Areas at risk (wetlands in particular where links with high density poultry populations), previous positive findings as referred to in point 2 of Part 1 of Annex II to Commission Decision 2010/367/EC should be taken into account and if possible complemented by a map.*

3.2.1 WILD BIRDS focussed on target species

Investigations according to the surveillance programme set out in Part 2 of Annex II to Decision 2010/367/EC

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

In case of multiannual programme, please provide targets on annual basis.
If your targets differ between different implementation years please provide separate tables per year in attachment.

NUTS (2) code/region (a)	Wild birds to be sampled (b)	Total number of birds to be sampled	Estimated total number of samples to be taken for active surveillance (c)	Estimated total number of samples to be taken for passive surveillance

					Add a new row

(a) Refers to the place of collection of birds/samples. In case NUTS 2 (Nomenclature of Territorial Units for Statistics) can not be used, region as defined in the programme by the Member State is requested. Please fill-in these values directly in the field.
 (b) General description of the wild birds are intended to be sampled in the framework of the active and passive surveillance.
 (c) Voluntary, to be included for information purposes, not eligible for cofinancing.

3.3 Sampling procedures and sampling periods

max 32000 chars :

In Cyprus there are no stations for capturing and ringing of wild birds. Faecal samples from high risk areas for active surveillance will be collected by the Veterinary personnel at the District Veterinary Offices.

Passive surveillance will consist of samples from birds found dead or injured will be collected and submitted to the Laboratories of the Veterinary Services. Samplings will be performed throughout the year.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

3.4 Laboratory testing : description of the laboratory tests used

max 32000 chars :

According to Chapter V of Commission Decision 2006/437/EC.

Isolation of total RNA from wild bird samples is automated and is done by the use of a MagNA Pure Compact System (magnetic-bead technology) combined with dedicated kits. The extracted RNA is tested by the recommended (avian influenza CRL) influenza A matrix gene protocol, by real time Taqman RT-PCR.

4. Description of the epidemiological situation of the disease in poultry during the last five years

max 32000 chars :

No avian influenza virus was detected in samples collected from poultry farms in the framework of the surveillance programmes carried out by the Veterinary Services during the last years.

5. Description of the epidemiological situation of the disease in wild birds during the last five years

(max. 32000 chars) :

No HPAI virus was detected in wild birds sampled in the framework of the surveillance programmes. However H1N1 was detected in wild birds in August

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

2006.

6. Measures in place as regards the notification of the disease

(max. 32000 chars) :

Any case of Avian influenza should be notified according to Animal Health Laws of 2001 until 2009. Furthermore, any such case will be notified to the EU through ADNS and OIE according to the relevant legislation provisions.

7. Costs

7.1 Detailed analysis of the costs

7.1.1 Poultry

(max. 32000 chars) :

The cost of the surveillance programme for poultry consists of the cost of the tests performed on samples collected.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

7.1.2 Wild birds

(max. 32000 chars) :

The cost of the surveillance programme for wild birds consists of the cost of the tests performed on samples collected.

Standard requirements for the submission of surveillance programmes for avian influenza

version : 2.22

7.2 Summary of the annual costs : 2014

7.2.1 Poultry surveillance

Detailed analysis of the cost of the programme - poultry

*In case of multiannual programme, please provide estimations on annual basis.
If your cost estimations differ between different implementation years please provide separate tables per year in attachment.*
