IN CONCLUSIONS

Overall picture

NATIONAL LEVEL

- is registered a stationary situation in the number of controlled bovine herds, an increase of the controlled ovi-caprine flock, and 100% of the controlled buffalo herds.
- The prevalence decrease in bovine, buffalo ad ovi-caprine holdings.
- An increase of the OF free holdings in bovine, buffalo and ovi-caprine.
- REGIONAL LEVEL
- Liguria presented in the 2013 the request for the status of OF and with the decision the 14 february 2014 are OF for brucellosis Bovine and ovicaprine.
- Lazio presented in the 2013 the request for the status of OF and with the Commission Decision of the 14 february 2014 are OF for brucellosis ovicaprine.
- Still continue the decrease of herd prevalence in Sicilia, and in the province of Messina is registered an improving of the situation but is necessary to progress more.

Actions at a National level (Ministry of Health)

- The Ministry of Health , given the persistence of the disease in some regions of Italy , including Sicily , renewed in August 2012, the order of 14-11-2006 " Extraordinary Measures of animal health in the field of tuberculosis , bovine brucellosis and buffalo , sheep and goats brucellosis , leucosis in Calabria, Campania, Puglia and Sicily , "which provides additional control measures for the diseases.
- This will see a further renewal in August 2014; with the occasion we would like to make some integration of the rule, based on experience gained over the years of application, to give an answer to both directions originated from the territory and from the FVO recommendations arising by the Audit in October 2013, which focused specifically the problems of the bovine and ovine and caprine brucellosis.
- The renewal is ready and will include not only the 'southern regions Calabria, 'Campania, Puglia and Sicilia, but all territories not UI, with guideline for stamping out, and sanitary management for fattening herds, and it will give also especially indication at the territories Officially free for the epidemiologic management of the outbreaks and indication for correct reporting in SIMAN.

Actions at a Regional level (Sicily)

Action taken in Sicily after the arriving of the Task Force

- Istitution of a Task Force in the ASP of Messina
- follow up in outbreaks of brucellosis of at least 21 days up to a maximum of 30 days
- electronic identification of all animals of the outbreak, all animals directed to transhumance and all ovi-caprine
- compulsory use of SANAN system and SIMAN system
- drawing of epidemiological reports, by Region Sicily, every three months through SANAN

- GPS identification of all holdings and pasture through National Database
- stamping out of infected S & G holdings after 5th consecutive positive control
- audits carried out in Local Veterinary Units
- epidemiological reports sent every three months to Local Veterinary Units

Thank you for your attention
