

**Analysis of major deficiencies detected during the non-discriminatory inspections and action plan to address them
as provided for in Article 27(2) of Regulation (EC) No 1/2005**

Member State SE
Year 2015

1. ANALYSIS OF THE MAJOR DEFICIENCIES DETECTED DURING THE NON-DISCRIMINATORY INSPECTIONS

For the purpose of this annual report, the following have been considered to be major deficiencies:

Over-stocking of pigs and cattle transported for slaughter and also of zoo animals; animals unfit for transport; Multi-tier vehicles for pigs lacking ladders etc for inspection; inadequate ventilation (and wet animals) in transports of poultry for slaughter; lacking health certificates (mainly dogs and horses) are some of the major deficiencies detected.

The severe cases were reported by the CABs for formal prosecution.

Most of the non-compliances reported by the OVs at slaughterhouses concerned the state of the animals upon arrival at the slaughteries and were reported for formal prosecution

2. ACTION PLAN TO ADDRESS THE DEFICIENCIES DESCRIBED UNDER POINT 1.

The CABs will continue and intensify their work with risk based controls and information to transporters.

(One CAB has e.g. produced a brochure about transport of sledge dogs.)

There are also on-going dialogues between CABs and parts of the industry in order to solve problems underlying some of the detected non-compliances.

The Swedish Board of Agriculture will, at the central CA-level, continue the work to harmonize the national reporting system with the EU-template, so that all the data easily can be put into the form.
