The aim of the programme is to test all the ovine and caprine animals not slaughtered for human consumption (dead animals) - up to 500 for ovine animals and up to 100 for caprine animals.

3. Description of the epidemiological situation of the disease

(max. 32000 chars):

Testing of bovine animals to BSE was started on 1997 and until now positive cases were not registered in Latvia.

4. Measures included in the programme

4.1 Designation of the central authority in charge of supervising and coordinating the departements responsible for implementing the programme

(max. 32000 chars):

The Food and Veterinary Service (FVS) of the Republic of Latvia is a state administrative institution headed by the CVO and supervised by the Ministry of Agriculture.

The FVS consists of the central body placed in Riga and territorial structural units (the local level) – 10 territorial offices and one city office. The central body coordinates activities of the local level and ensure a unified implementation of legislation. The local level caries out the official surveillance in accordance with the state surveillance programmes and reports to the central body. The State authorised veterinarians report to the respective local veterinary office.

Veterinary Surveillance Department of FVS:

- Develops reglament of FVS and programmatic documents on prophylaxis and eradication of TSEs, determine necessity of developing of normative acts and suggest initiative of administration of FVS in this light;
- In compliance with demands determined by normative acts, FVS programmatic and reglament documents, develop concrete instructions on prophylaxis and eradication of TSEs, organise execution, carry out control of execution and analyses of results, suggests necessary corrections in programmatic and reglament documents

Unprofessional structures and persons:

Animal owners are responsible for notification on animal death and clinical suspected animals as it is defined in legislation.

To ensure common data registration system, State Pedigree Information Data Processing Centre (Data Centre) develops register of animals, herds and holdings. Data Centre gives number for holding and this number is not changed during holding or herd is active. Animal owner informs Data centre on animal movement, liquidation of herd or holding, change of owners within seven days.

4.4 System in place for the identification of animals

Regulation of Cabinet of Ministers No 650, 16 August, 2011 "Order of registration of animals, herds and holdings and identification of animals" determines procedures of individual identification of cattle (Repealing Regulation of Cabinet of Ministers No 712, 16 December, 2003 "Order of registration of animals, herds and holdings and identification of animals").

All ovine and caprine animals should be identified by ear tag. Movement of animals, realization of products are allowed if herd, holding is registered, animals are identified accordingly requirements of regulation.

4.5 Measures in place as regards the notification of the disease

(max. 32000 chars):

Animal owners must immediately notify to veterinarian on animal death, aborts, simultaneous affection of several animals and any case, which arise suspicions that animal are affected by infectious disease (Chapter XI, Article 59, point 8.a of the Law of Veterinary medicine).

4.7 Eradication

4.7.1 Measures following confirmation of a BSE case

4.7.1.1 Description

(max. 32000 chars):

After confirmation of BSE case FVS will carry out inquiry to identify:

- all other ruminants on the holding of the animal in which the disease was confirmed;
- where the disease was confirmed in a female animal, its progeny born within two years prior to, or after,
- clinical onset of the disease,
- all animals of the cohort of the animal in which the disease was confirmed,
- the possible origin of the disease,
- other animals on the holding of the animal in which the disease was confirmed or on other holdings which may have become infected by the TSE agent or been exposed to the same feed or contamination source,
- the movement of potentially contaminated material.

As so far Latvia is free from BSE, killing and destruction of animals identified by the inquiry will be done.

4.7.2 Measures following confirmation of a scrapie case

4.7.2.1 Description

(max. 32000 chars):

After confirmation of TSE case in ovine or caprine animal FVS will carry out inquiry to identify:

- all ruminants other than ovine and caprine animals on the holding of the animal in which the disease was confirmed,
- insofar as they are identifiable, the parents, and in the case of females all embryos, ova and the last progeny of the female animal in which the disease was confirmed,
- all other ovine and caprine animals on the holding of the animal in which the disease was confirmed in addition to those referred to in the second indent,
- the possible origin of the disease and the identification of other holdings on which there are animals, embryos or ova which may have become infected by the TSE agent or been exposed to the same feed or contamination source,
- the movement of potentially contaminated materials which may have transmitted the TSE agent to or from affected holding.

In a case of BSE cannot be excluded, all animals, embryos and ova identified by inquiry will be killed and destroyed.

When BSE is excluded, in case of classical scrapie depending on size and genetic value of the herd, FVS will take a decision to apply measures set in Point 2.3.b (i) or 2.3.b (ii), Chapter A of Annex VII of the Regulation of the European Parliament and Council (EC) No 999/2001.

In a case of atypical scrapie all animals, embryos and ova identified by inquiry will be killed and destroyed.
