

Table 4. Analysis of major deficiencies detected during the non-discriminatory inspections and action plan to address them as provided for in Article 27(2) of Regulation (EC) No 1/2005

Hungary

2017

1. ANALYSIS OF THE MAJOR DEFICIENCIES DETECTED DURING THE NON-DISCRIMINATORY INSPECTIONS

For the purpose of this annual report, the following have been considered to be major deficiencies:

Borsod-Abaúj-Zemplén	<p>The health and welfare status of the animals is a risk factor. All animal transports were within 8 hours. Typical cases of non-compliance: contaminated integument of pigs (HU490 28 cases significant reduction in frequency), tail biting of pigs (HU490 37 cases, significant reduction in frequency). Stocking densities were exceeded (HU490), but the transport of animals to the slaughterhouse with own vehicle is usually shorter than 20 km. Emergency slaughters after arrival happened (HU490 7 cases, HU881 1 cases). Peracute respiratory / circulatory insufficiency, PSS with or without chronic organ inflammation. Acute erysipelas (HU881 on pigs originated from SK 1 cases/4 animals). the identification of animals has improved considerably compared to the previous year. Chronic alterations of/around the joints, the limb ends and the knuckle. Chronic pulmonary and pleurisy inflammation with connective tissue adhesion. Signs of previous ascarid damage in the liver. Limb/pelvic slipping due to transportation in 9 cases 1 is unable to move emergency slaughter. Presence of minor epithelial lesions due to hierarchical fights. The presence of hidden swellings, abscesses, and hemorrhages. Appearance of indicator diseases (scabies, erysipelas). Presence of hidden testes (less frequent).</p>
Csongrád	<p>After the notification of the Bulgarian competent authorities in 1 case the transport plan was examined retrospectively. The transport was different as planned, because there was no confirmation of the control post. Due to the fact that the change of route did not cause a direct animal welfare problem, the transporting company received a written warning</p>
Heves	<p>Lack of driver's certificate of competence, or falsified certificates. Warning to re-emit concerned document.</p>
Somogy	<p>Lack of marking in case of pigs consignment from the Netherlands. There were unmarked animals, the numbers did not correspond with the document. The Hungarian competent authorities consulted with the Dutch competent authorities.</p>
Zala	<p>Consignment of animals planned in Traces logbook didn't arrive in the national control post</p>

2. ACTION PLAN TO ADDRESS THE DEFICIENCIES DESCRIBED UNDER POINT 1.

Zala	<p>"Virtual" TRACES spot-checks in case of deficiencies, after cross-checking data with the control post, in case of consignments where Steiner & Rony Livestock control post was indicated in the logbook prior transportation. Indication of non-compliance and sending them to the TRACES system in Part III Supervision.</p>
