To: 2018

Year of implementation: 2018

1. Technical implementation of the programme

1.1 Description and evaluation of the evolution of the epidemiological situation, the technical implementation of the activities foreseen under the programme and the cost-effectiveness of the programme.

The programme for 2018 includes the following activities:

-Clinical examinations of all categories of pig farms - industrial and type A, backyards and East-Balkan pigs by official and private veterinarians;

-Laboratory testing of samples collected from animals from industrial, type A, type B, East-Balkan pigs farms;

-Laboratory testing of samples collected from wild boars - under active and passive surveillance.

Further to the surveillance activities, no positive case of CSF was detected in 2018 on the territory of Bulgaria.

- Active clinical monitoring of pigs for CSF, including a targeted sampling and testing scheme as regards CSF;
- Continued enforcement of the ban of prophylactic vaccination against CSF of the domestic pig population, including East-Balkan pigs;
- Quick and effective application of the required measures for control and eradication of any outbreaks of disease that have emerged meanwhile;
- Surveillance in wild boar

1.2 Details on the level of achievement of the targets set in the approved programme and technical difficulties.

In the period of 01.01. - 31.12.2018 the following were implemented in total:

- 17 865 clinical examined holdings with 4 742 domestic and East-Balkan pigs sampled;

- 4 474 wild boar were tested for CSF;

It total 9120 ELISA tests and 224 PCR tests were carried out for domestic pigs, East-balkan pigs and wild boar.

All of the sampled animals showed negative results of tests..

1.3 Epidemiological maps for infection and other relevant data on the disease/activities (information on serotypes involved,...) (Please attach files of data using the PDF attachment feature) Use the textbox below to provide clarifications for the maps you attach, if needed.
