1. General information

1.1 Crop/traits

Carnation (*Dianthus caryophyllus*) with modified flower colour, variety Florigene®Moonvelvet™.

1.2 Decision authorisation number pursuant to Directive 2001/18/EC and number and date of consent pursuant to Directive 2001/18/EC

Florigene®Moonvelvet™

Decision authorisation number; C/NL/09/02

Number of consent; C/NL/09/02/00 ab.1

Date of consent; July 20, 2015

1.3 Decision authorisation number and date of authorisation pursuant to Regulation (EC) No. 1829/2003

Not applicable.

1.4 Unique identifier

IFD-26407-2

1.5 Report period from

July 1, 2021 to June 30, 2022

1.6 Other monitoring reports have been submitted in respect of cultivation

YES NO

2. Executive summary

Approximately 3 tonnes (0.15 million flowers) of Florigene® Moonvelvet™ were imported into the EU from July 1, 2021 to June 30, 2022, through a single importer in the Netherlands. Flowers were imported from Colombia.

Results of general monitoring for the occurrence of genetically modified carnation in the EU were;

- The importer and a breeder reported that they were not aware of any illegal growing. Neither they nor consumers have reported any adverse effects of handling the flowers.
- No reports were provided via the Florigene website. Florigene/Suntory received one question from EU-based public, distributors, or retailers in the period. This query related to business opportunities in Australia.
- Information on survey work was provided by three botanical experts, covering work in 10 European countries. There was no evidence of the establishment of any carnation populations in the wild, or of hybridisation between carnation and wild *Dianthus* species.
- 33 responses were received from 153 emails sent to botanical gardens and previously contacted entities. None of the respondents reported collecting or observing carnation populations established outside of cultivation. Wild type *Dianthus caryophyllus* records were noted.
- A review of literature related to *Dianthus* was carried out. No escape populations of cultivated carnation or hybrids with other *Dianthus* species in wild populations were identified.
- Botanical and floral databases were searched for records of carnation and *Dianthus caryophyllus* made since the last monitoring report. New records of *Dianthus caryophyllus* L. were found from Germany, Norway, France, Portugal and Switzerland. Photographs of the observations (where available) and follow up communication indicated observations to be 5-petal wild *Dianthus caryophyllus* or non-transgenic varieties of carnation.

The overall results are consistent with previous monitoring reports and indicate carnation is not established in nature in Europe. The monitoring this year supports previous observations that wild type *Dianthus caryophyllus* is rare and is most commonly found in France.

3. Uses of GMOs other than cultivation

3.1 Commodity imports into the community

3.1.1 Commodity crop (GM and non-GM) imports into the community by country of origin

GM product

GM product was imported from Colombia and Ecuador. Table 1 provides information on the imports of all transgenic carnation varieties imported into the EU in this reporting period. Information on the specific variety covered by this report is highlighted in red font.

Table 1. Tonnes of GM carnation imported into the EU from July 1 2021 to June 30 2022

| GM carnation variety | Quantity (tonnes) | |
|------------------------------|-----------------------|------------------------|
| | Imported from Ecuador | Imported from Colombia |
| Florigene®Moonaqua™ | 31 | 13 |
| Florigene®Moonlite™ | 24 | 11 |
| Florigene®Moontea™ | 0 | 12 |
| Florigene®Moonberry™ | 0 | 3 |
| Florigene®Moonvelvet™ | 0 | 3 |
| Florigene®Moonvista™ | 13 | 8 |
| All GM carnation varieties | 68 | 50 |

GM and non-GM product

When the EUROSTAT database was accessed in late July information on import of carnation flowers was only shown to the end of April 2022. In order to estimate the percentage of imports which are GM we have therefore chosen to use data for the 12-month period from May 2021 to April 2022. Table 2 shows the data for imports of the GM carnation varieties over this period. Table 3 shows the combined total of GM and non-GM carnation flower imports¹ over the same period.

Table 2. Tonnes of GM carnation imported into the EU from May 2021 to April 2022.

| GM carnation variety | Quantity (tonnes) | |
|------------------------------|-----------------------|------------------------|
| | Imported from Ecuador | Imported from Colombia |
| Florigene®Moonaqua™ | 33 | 11 |
| Florigene®Moonlite™ | 25 | 11 |
| Florigene®Moontea™ | 0 | 11 |
| Florigene®Moonberry™ | 0 | 3 |
| Florigene®Moonvelvet™ | 0 | 3 |
| Florigene®Moonvista™ | 14 | 7 |
| All GM carnation varieties | 72 | 46 |

Table 3. Estimated import of carnation flowers (total of GM plus non-GMO) into the EU, May 2021 to April 2022.

| Country of origin | Quantity (tonnes)* | |
|--------------------|--------------------|--------------------|
| | NL imports | EU27 total imports |
| Ecuador | 309 | 356 |
| Colombia | 11,761 | 14,232 |
| Other countries | 17,538 | 20,353 |
| Total ² | 29,608 | 34,941 |

* From EUROSTAT (code 06031200; fresh cut carnations, DS-016890 trade since 1988 by CN8).

Percentage of import which is GM

Table 4 shows the percentage of carnation flower import into the EU which is GM.

Table 4. Percentage of carnation flower import into the EU which were GM flowers. Data is calculated from tables 2 and 3.

| GM carnation variety | Percentage of carnation imports | | |
|------------------------------|---------------------------------|-----------------|------------------------------|
| | From Ecuador# | From Colombia## | From all extra-EU countries* |
| Florigene®Moonaqua™ | 9.19% | 0.08% | 0.13% |
| Florigene®Moonlite™ | 7.11% | 0.08% | 0.10% |
| Florigene®Moontea™ | 0.00% | 0.08% | 0.03% |
| Florigene®Moonberry™ | 0.00% | 0.02% | 0.01% |
| Florigene®Moonvelvet™ | 0.00% | 0.02% | 0.01% |
| Florigene®Moonvista™ | 3.91% | 0.05% | 0.06% |
| All varieties | 20.21% | 0.33% | 0.34% |

GM imports into the EU27 from Ecuador as a percentage of total GM plus non-GM product imported from Ecuador

GM imports into the EU27 from Colombia as a percentage of total GM plus non-GM product imported from Colombia

*GM imports into the EU27 from all extra-EU countries (including Ecuador plus Colombia) as a percentage of total GM plus non-GM product

3.1.2 Commodity crop (GM and non-GM) imports into the community by country of destination

All imports of the GM product were into the Netherlands. Table 5 shows the percentage of carnation flower imports into the Netherlands which were GM.

Table 5. Percentage of carnation flower import into the Netherlands which were GM flowers. Data calculated from tables 2 and 3.

| GM carnation variety | Percentage of carnation imports | | |
|------------------------------|---------------------------------|-----------------|------------------------------|
| | From Ecuador# | From Colombia## | From all extra-EU countries* |
| Florigene®Moonaqua™ | 10.59% | 0.10% | 0.04% |
| Florigene®Moonlite™ | 8.19% | 0.10% | 0.04% |
| Florigene®Moontea™ | 0.00% | 0.09% | 0.04% |
| Florigene®Moonberry™ | 0.00% | 0.03% | 0.01% |
| Florigene®Moonvelvet™ | 0.00% | 0.02% | 0.01% |
| Florigene®Moonvista™ | 4.51% | 0.06% | 0.02% |
| All varieties | 23.28% | 0.40% | 0.16% |

GM imports into NL from Ecuador as a percentage of total GM plus non-GM product imported from Ecuador

GM imports into NL from Colombia as a percentage of total GM plus non-GM product imported from Colombia

*GM imports into NL from all extra-EU countries (including Ecuador and Colombia) as a percentage of total GM plus non-GM product

3.1.3 Analysis of data provided in 3.1.1 and 3.1.2

Approximately 3 tonnes of the GM event Florigene®Moonvelvet™ were imported in the monitoring period (July 2021 to June 2022). Imports were from Colombia (table 2). The transgenic carnation event represents approximately 0.02% of total imports of carnation into

the EU from Colombia (table 4). As the Netherlands dominates the import of extra-EU27 imports of carnation, similar percentages were recorded for import into the Netherlands alone. The transgenic carnation event represents approximately 0.02% of total imports of carnation into the Netherlands from Colombia (table 5).

3.2 General surveillance

3.2.1 Description of general surveillance

The general surveillance plan consisted of;

1. Importer questionnaire.
2. Survey reports. Florigene contacted a breeder and engaged the services of botanists to alert us to any wild carnation populations or unusual *Dianthus* hybrids. This year we have received information from three experts and the breeder.
3. Mail out. An email survey was carried out, in multiple languages. 153 contacts were made in 2022, in accordance with the revision of the mail out strategy proposed last year.
 - Contact was made with 128 entities that have never responded by letter. The enquiry was not accompanied by a brochure or pamphlet.
 - Contact was made with 25 entities who have responded regularly advising them that a) though a mail out will no longer be made the general monitoring will continue b) provide contact details for them to voluntarily advise of any observations of escape carnation populations in future years.
4. Literature review (attachment 5) and database review (attachment 6).

The same general monitoring plan was applied to all the transgenic carnation varieties which are imported into the EU. Accordingly, the information provided in attachments 1 to 6 is similar in the monitoring reports for each transgenic carnation event imported into the EU.

3.2.2 Details of industry, environmental, food and/or feed related surveillance networks used during general surveillance

Attachment 1. Breeders and experts contacted in 2022.

Attachment 2. Institutions contacted in 2022.

Attachment 6. Databases reviewed in 2022.

3.2.3 Details of information and/or training provided to importers, handlers, processors etc.

No training was provided.

3.2.4 Results of general surveillance

Importer questionnaire

See attachment 3. The importer reported that they were not aware of any illegal growing and that neither they nor their consumers have reported any adverse effects of handling the flowers.

Website feedback

Three queries were made to the Florigene website during the year. Two were from outside Europe and one was seeking industry leads in Australia.

Survey reports

Florigene received survey reports from three expert botanists. The results, summarised in attachment 4, reported no evidence of escape populations of transgenic carnation and no evidence of putative hybrids.

Mail out

The results of the 128 emails to entities that have never responded by letter were;

- 17 emails were returned as undeliverable. Access to contact information was via web search and we assume these email addresses were not updated by webmasters.
- 16 responses were received (14.4% response rate). The response rate was lower than the 40 – 50% normal response rate to emails, but acceptable given the entities had not responded to multiple letter requests in the past. The majority of responses were unable to assist or confirmed no records of *D. caryophyllus* or carnation. No entity had any record of carnation naturalisation. Two institutions had recent records of wild type *Dianthus caryophyllus* (all collected in France). One herbarium had a wild type specimen from 1550.

Replies were received from 16 of the other 25 entities contacted (64% response rate). All but one of the responses was to indicate no records or no change since the last monitoring report. The single other response was a new herbarium record of carnation, which based on colour and record details was a non-transgenic variety in cultivation.

In summary, the responses to the mail out did not provide evidence of “escape” or naturalised populations of carnation.

Literature review

Attachment 5 summarises the output from the literature review. A summation is provided in section to 3.2.6.

Database review

Attachment 6 lists the details of the 73 databases examined. No databases identified transgenic carnation, or hybrids between transgenic carnation and wild *Dianthus* populations. Sixteen databases (listed in table 1 of attachment 6) provided records of *Dianthus caryophyllus* (or synonyms) in Europe that were made since the last monitoring report. Where photographs were available, or collectors were able to be contacted it was established the records were of wild type *D. caryophyllus* or non-transgenic carnation in or adjacent to cultivation (refer table 1, attachment 6).

3.2.5 Additional information

No adverse or unanticipated effects associated with production or sale of flowers of the transgenic event have been observed or reported. Additional information relevant to the transgenic event is summarised below.

Production sites

In May 2022 the transgenic carnation production area in Colombia was surveyed for the possible presence of escaped populations of cultivated transgenic carnation. No carnation plants were found outside of cultivation.

Phenotypic stability

Off-type percentage in the event was measured in Colombia in May 2022. The flower colour modification phenotype remains stable with no observed off-type.

3.2.6 Review of peer-reviewed publications – Attachment 5

Attachment 5 provides details of the methodology and outcome of the literature review. Papers cited numerically in this section are listed in the reference list in attachment 5 and cross referenced by those numbers.

Evidence for escape of carnation from cultivation

None of the literature identified cultivated carnation, escape populations of cultivated carnation or hybrids with other *Dianthus* species in wild populations.

Vegetation survey data

Of the 255 papers read, 125 were vegetation surveys, local floras or plant checklists. No *Dianthus* species were identified in 58 of those papers. In the other 67 papers [1 – 67] one or more *Dianthus* species were found but not *Dianthus caryophyllus*. A total of 150 records of 69 different *Dianthus* species were noted in the 67 papers with *D. armeria*, *D. deltoides*, and *D. carthusianorum* the three most widely reported species (table 6).

Table 6. The number of citations noted in references 1 – 67 (attachment 5) in which one or more *Dianthus* species were recorded

| GM carnation variety | Number of citations |
|---|---------------------|
| <i>Dianthus armeria</i> L. | 14 |
| <i>Dianthus deltoides</i> L. | 13 |
| <i>Dianthus carthusianorum</i> L. | 9 |
| <i>Dianthus sylvestris</i> Wulfen | 8 |
| <i>Dianthus superbus</i> L. | 7 |
| <i>Dianthus barbatus</i> L. | 6 |
| <i>Dianthus hyssopifolius</i> L. | 5 |
| <i>Dianthus pinifolius</i> Sm. subsp. <i>pinifolius</i> | 4 |
| <i>Dianthus petraeus</i> Waldst. & Kit. | 4 |
| <i>Dianthus longicaulis</i> Ten. | 4 |

Wild *Dianthus* species whose synonym names are subspecies of *D. caryophyllus*³ were noted in Italy and France. These species were *D. longicaulis* [16, 22, 33, 61], *D. saxicola* [43], *D. siculus* [27] and *D. tarentinus* [63]. Cultivated *Dianthus* species other than carnation (for example sweet william, *D. barbatus*) were recorded in surveys in Romania [50], the UK [58] and Germany [89].

In a review of plant distribution in European Alps and the Caucasus [80], wild *D. caryophyllus* was stated to occur in the Alps only.

Dianthus taxonomy

Papers discussing the genetic relatedness, ploidy, taxonomy and lectotypification of *Dianthus* species related to and synonymous with *Dianthus caryophyllus* have been published in this reporting period [70, 75, 76, 77, 78, 91, 92]. Several of the authors had been contacted in earlier mail outs as part of this monitoring process. These papers show that the wild *Dianthus* species with synonyms to wild *Dianthus caryophyllus* are now well characterised and are not likely to be confused with *D. caryophyllus* in the literature, let alone be confused with cultivated carnation. For this reason, the synonyms to *D. caryophyllus* will be removed from literature review and database review in future monitoring reports.

Published literature on the transgenic event

No literature relating to the transgenic events was identified.

Carnation molecular biology

Evidence for a role of transcription factor expression in interruption of anthocyanin biosynthesis in carnation has been published [73, 93]. Transcription factor mediated variation to the anthocyanin pathway is one possible cause of the variation in flower colour sometimes observed in transgenic carnation.

³ Bacchetta, G., Brullo, S., Casti, M., & Pietro Giusso del Galdo, G. (2010). Taxonomic revision of the *Dianthus sylvestris* group (Caryophyllaceae) in central–southern Italy, Sicily and Sardinia. *Nordic Journal of Botany*, 28(2), 137-173.

A second carnation genome sequence has been generated for carnation using the non-transgenic variety “scarlet queen” [93]. The nucleotide sequences have been made available⁴ and data includes mapping of certain loci to the anthocyanin biosynthesis pathway in carnation [93].

Other information

other relevant papers were;

- A phylogenetic analysis [85] carried out on flavonoid 3'5' hydroxylase – the colour modification gene in the transgenic carnation.
- Photo-luminescence (dye treated flowers) carnation has been described [86]. Potentially these are new, non-transgenic, carnation varieties.
- *Dianthus caryophyllus* was shown to be sensitive to cadmium and not suitable for reclamation vegetation [83].
- A review of edible flower use in Europe includes non-transgenic cultivated carnation [68]
- A review on the health benefits of delphinidin (the novel anthocyanin in the transgenic carnation flowers) has been published [81].
- Further evaluation and characterisation of the delphinidin-enhanced transgenic crimson tomato and indigo tomato has been made [69,71].
- Wild *D.pavonius* and *D.carthusianorum* genotypes from mountain areas have been identified as potential nursery species [72].
- *Dianthus campestris* has been identified as an indicator species for soil type [74].
- Additional evidence has been provided for enthno-medical use of carnation to treat health problems [84].
- More background information on pollination biology, ecology and climate adaptation in *Dianthus* species other than *Dianthus caryophyllus* has been published [24, 70, 82, 87, 88].
- Methods for conservation of rare *Dianthus* species has been described [11,13, 79].
- The persistence of cultivated *Dianthus* species other than carnation in abandoned rural areas has been presented [21, 39, 40, 90].

3.3 Case-specific monitoring

3.3.1 Description and results of case-specific monitoring (if applicable)

Not applicable.

Processing (if applicable)

| EU member state | Point of entry/point of cultivation | Point of processing | Distance from point of entry/site of cultivation | Transport used |
|-----------------|-------------------------------------|---------------------|--|----------------|
| Not applicable | | | | |

3.3.2 Monitoring and reporting of adverse effects resulting from accidental spillage (if applicable)

Not applicable.

⁴ https://www.ncbi.nlm.nih.gov/assembly/GCA_023091065.1
https://www.ncbi.nlm.nih.gov/genome/?linkname=pubmed_genome&from_uid=35247284

3.4 Concluding remarks

There was no evidence of the establishment of the transgenic carnation event in the wild, or of introgression with wild *Dianthus* species. There has been no evidence of unexpected adverse effects on human health or the environment.

The general monitoring of the literature and databases again generated more relevant records than the mail out, which will be discontinued from 2023, as proposed and adopted in November 2021⁵.

4. Summary of results and conclusions

Results

1. The importer reported that they were not aware of any illegal growing and that neither their staff nor consumers have reported any adverse effects of handling the flowers.
2. Reports from surveys carried out by three experts failed to identify Florigene® Moonvelvet™ in the wild and no evidence of hybridisation to this variety.
3. A final mail out was carried out. None of the responses received identified any plants which could have been Florigene® Moonvelvet™.
4. A review of recent peer-reviewed literature failed to identify any variety of cultivated carnation outside of cultivation in Europe.
5. Sixteen databases (listed in table 1 of attachment 6) provided records of *Dianthus caryophyllus* (or synonyms) in Europe that were made since the last monitoring report. Where photographs were available, or collectors were able to be contacted it was established the records were of wild type *D. caryophyllus* or non-transgenic carnation in or adjacent to cultivation.

Conclusions

There was no evidence of the establishment of carnation of any variety in the wild, or of introgression. The data collected was consistent with the distribution in nature in Europe of wild-type unimproved *Dianthus caryophyllus* only, primarily in France.

5. Adaptation of the monitoring plan and associated methodology for future years

The literature and database review will be continued. Publicly available flora databases and research vegetation databases are the most relevant source of information and efforts will continue to be made to ensure all relevant European databases have been identified, expanding the current list of databases. Larger “citizen scientist” on-line depositories of observations, particularly *i-naturalist*, are a very useful resource. Though the mail out part of the monitoring plan has been discontinued, there are a number of European herbaria that have not yet been contacted. Next year we plan to contact these as part of the literature review, using the contact information in the *Index Herbariorum* database.⁶

The synonym names for *Dianthus caryophyllus* will not be included as search words in future literature and database reviews. We have not found any instances where these species have been used as the Latin name for carnation and have only found examples of wild type *Dianthus* when records of such synonyms have been found in databases. In the scientific literature *Dianthus* species are carefully defined and carnation is universally known as *Dianthus caryophyllus*.

⁵https://webgate.ec.europa.eu/fip/GMO_Registers/GMO_Part_C.php

⁶ <http://sweetgum.nybg.org/science/ih/>

We will continue to carry out the literature and database reviews with sufficient time to contact authors and collectors if necessary.

We will continue to work with experts in the Balkans and continue to try and find botanical experts based in Italy and France.

Attachment 4. Summary of survey data

Florigene received reports from three experts, covering work in seven Balkan countries, Austria, Greece and Italy. None of the experts found any indication of hybrids with transgenic carnations, populations of carnation or populations of wild *Dianthus caryophyllus*. Restrictions to movement imposed by the Covid-19 pandemic remained in place for some of this period (until the end of June 2022 in some places).

Slovakia

One expert provided data for Slovakia. Dates and locations of sampling are listed in table 1, with *Dianthus* species identified. Five *Dianthus* species were recorded, but not *Dianthus caryophyllus*.

| Month | Location | Species |
|----------------|---|---|
| August 2021 | Slovakia, Štiavnické vrchy Mts., Banská Belá village, meadows at site "Pod Kramiarom" near train lines, 48°29'11.4"N 18°56'58.5"E | <i>Dianthus carthusianorum</i> L. |
| September 2021 | Slovakia, Štiavnické vrchy Mts., Banský Studenec village, meadows west from the Kolbašský tajch pool, 48°27'08.0"N 18°58'24.5"E | <i>Dianthus carthusianorum</i> L. |
| September 2021 | Kremnické vrchy, Veľká Stráž hill, rocky cliffs upper the R1 highway, 48°33'34.9"N 19°05'33.3"E | <i>Dianthus carthusianorum</i> L. |
| June 2022 | Slovakia, Štiavnické Vrchy Mts., Vyhne village, dry grasslands near Kamenné more Nature Monument, 48°30'35.9"N 18°47'38.6"E | <i>Dianthus carthusianorum</i> L. <i>Dianthus deltoides</i> L. |
| June 2022 | Hungary, Tihany, Porta Pacis, 46°54'51.5"N 17°53'21.8"E | <i>Dianthus carthusianorum</i> L. |
| June 2022 | Slovakia, Biele Karpaty Mts., Bohunice village, Babiná hill, dry grasslands, 49°02'07.0"N 18°10'38.9"E | <i>Dianthus carthusianorum</i> L. |
| June 2022 | Slovakia, Podunajská nížina Lowland, Nesvady, calvary hill in the village, 47°55'38.5"N 18°07'28.4"E | <i>Dianthus serotinus</i> W. & K. |
| July 2022 | Slovakia, Borská nížina Lowland, Borský Mikuláš village, abandoned Jewish cemetery W from the village, 48°37'42.7"N 17°11'22.9"E | <i>Dianthus serotinus</i> W. & K. |
| July 2022 | Slovakia, Myjavská pahorkatina Hills, Myjava, Holičov vrch Hill, dry grasslands, 48°44'03.6"N 17°33'17.7"E | <i>Dianthus carthusianorum</i> L. |
| July 2022 | Slovakia, Myjavská pahorkatina Hills, Myjava, ruderalized grassland near re-cultivated waste deposit, 48°44'20.4"N 17°33'06.8"E | <i>Dianthus armeria</i> L. |
| July 2022 | Slovakia, Malé Karpaty Mts., Plavecké Podhradie village, ruin of the Plavecký Hrad castle, 48°29'37.1"N 17°16'07.2"E | <i>Dianthus praecox</i> subsp. <i>lumnitzeri</i> |
| July 2022 | Slovakia, Myjavská pahorkatina Hills, Podbranč - Podzámok, ruin of the Branč castle, dry grasslands, 48°43'59.6"N 17°28'06.9"E | <i>Dianthus carthusianorum</i> L. |
| July 2022 | Slovakia, Malé Karpaty Mts., Brezová pod | <i>Dianthus armeria</i> L. |

| | | |
|-----------|---|-----------------------------------|
| | Bradlom, Mníchova úboč Nature Reserve, dry grasslands, 48°38'56.7"N 17°29'57.7"E | <i>Dianthus carthusianorum</i> L. |
| July 2022 | Slovakia, Malé Karpaty Mts., Brezová pod Bradlom, Kysel'ová Nature Reserve, dry grasslands, 48°38'39.8"N 17°30'01.0"E | <i>Dianthus carthusianorum</i> L. |

Republic of North Macedonia

One expert provided data for North Macedonia. Dates and locations of surveys are listed in table 2.

Table 2. Details of field work in Republic of North Macedonia

| Month | Location | Species |
|-----------|--|--|
| Sep 2021 | Skopska Crna Gora mountains | No <i>Dianthus</i> species identified |
| June 2022 | Jakupica mountain range (Skopje region) | <i>Dianthus kapinaensis</i> and <i>Dianthus deltoides</i> subsp. <i>degenii</i> were identified. |
| June 2022 | Demir Kapija region | No <i>Dianthus</i> species identified |
| Informal | Urban and peri-urban sites in the city of Skopje | No <i>Dianthus</i> species identified |

Six populations of *Dianthus* species were also identified in North Macedonia, by a third expert. The species found were *Dianthus integer*, *D. deltoides* and *D. sylvestris*.

Italy

Table 3 lists the *Dianthus* species identified in Italy. The records of *D. caryophyllus* were wild type.

| Month | Location | Species |
|-----------|---|--|
| June 2021 | Pesaro E Urbino, Marche | Complex <i>Dianthus caryophyllus</i> |
| June 2021 | Province of Ascoli Piceno | <i>Dianthus ciliatus</i> |
| June 2021 | Province of L'Aquila | <i>Dianthus sylvestris</i> |
| June 2021 | Province of Pesaro and Urbino | <i>Dianthus ciliatus</i> , Complex <i>Dianthus caryophyllus</i> |
| June 2021 | Province of Teramo | <i>Dianthus deltoides</i> , <i>Dianthus sylvestris</i> |
| July 2021 | Altipiani di Arcinazzo, Metropolitan City of Rome | <i>Dianthus sylvestris</i> |
| July 2021 | Province of Avellino | <i>Dianthus sylvestris</i> |
| July 2021 | Province of Campobasso | <i>Dianthus ciliatus</i> |
| July 2021 | Province of Chieti | <i>Dianthus ciliatus</i> , <i>Dianthus sylvestris</i> |
| July 2021 | Province of Foggia | <i>Dianthus sylvestris</i> , <i>Dianthus tarentinus</i> |
| July 2021 | Province of Frosinone | <i>Dianthus sylvestris</i> |
| July 2021 | Province of L'Aquila | <i>Dianthus deltoides</i> |
| July 2021 | Province of Salerno | <i>Dianthus sylvestris</i> |

Other countries

Table 4 lists the *Dianthus* records provided by the third expert for the other countries where records were made. Record dates are from August 2021 to July 2022.

| Country | Number of records | Species identified |
|----------------------|-------------------|--|
| Albania | 7 | <i>Dianthus ciliates</i> , <i>D.deltoides</i> , <i>D.sylvestris</i> |
| Austria | 7 | <i>Dianthus alpinus</i> , <i>D. carthusianorum</i> , <i>D. superbus</i> , <i>D.barbatus</i> , <i>D.sylvestris</i> |
| Bosnia - Herzegovina | 6 | <i>Dianthus ciliates</i> , <i>D. integer</i> , <i>D.sylvestris</i> |
| Bulgaria | 8 | <i>Dianthus petraeus</i> , <i>D. microlepis</i> |
| Croatia | 27 | <i>Dianthus ciliates</i> , <i>D.deltoides</i> , <i>D.sylvestris</i> , <i>D. carthusianorum</i> , <i>D. armeria</i> , <i>D. hyssopifolius</i> , <i>D. petraeus</i> , <i>D.barbatus</i> , <i>D.sylvestris</i> |
| Greece | 13 | <i>Dianthus caucaseus</i> , <i>D. integer</i> , <i>D. orientalis</i> , |
| Montenegro | 5 | <i>D. ciliates</i> , <i>D.sylvestris</i> |

Attachment 5. Literature review methodology

Source databases and journals

Literature searches were carried out using the following databases.

- AGRICOLA Article citation (NAL)
- Proquest -biological sciences
- Science Direct (Elsevier)
- Google Scholar

All papers published since January 2021 in these five journals were also reviewed;

- Preslia
- Journal of vegetation science
- Vegetation classification and survey
- PhytoKeys
- *Hladnikia*

Search terms

Search terms used were carnation, carnation biology, *Dianthus*, *Dianthus* biology, *Dianthus* fertilization, *Dianthus* gene, *Dianthus* genome, *Dianthus* medicinal, Europe flora, Europe plant survey, Europe plant checklist, Europe botany survey, *Dianthus caryophyllus*, vegetation survey, Europe vegetation, *Dianthus arrosti*, *Dianthus caryophyllus* var. *coronarius*, *Dianthus gasparrinii* Guss., *Dianthus godronianus* Jord, *Dianthus longicaulis* Ten., *Dianthus saxicola*, *Dianthus siculus*, *Dianthus sylvestris* subsp. *longibracteatus*, *Dianthus sylvestris* subsp. *boissieri*, *Dianthus tarentinus*, *Dianthus virgatus*.

Search terms were each used exactly as listed in normal font, with use of suitable filters to remove papers published before the beginning of 2021. The primary focus of the literature review was seeking information on carnation and *Dianthus* populations outside of cultivation.

Citation search

48 key citations from literature reviews from previous monitoring reports were searched in google scholar for citing literature, which was then screened.

Literature review short list

The initial review identified hundreds of abstracts. Papers not considered for further review covered the chemistry of secondary products, essential oil preparation and analysis, non-European studies, horticultural studies relating to carnation production and breeding, physiological and biochemical studies relating to post-harvest care in carnation, herbicide resistance and plant pathology studies. Abstracts concerning the coral species *Dianthus* or clove oil use were ignored.

Following the initial cull, 256 papers were read, including any supplementary information files provided with the papers. No naturalised populations of cultivated carnation were identified in any of the papers.

93 papers with relevance to carnation or *Dianthus caryophyllus* distribution, identification of other *Dianthus* species, potential weediness, possible biosafety implications, taxonomy and/or genetic modification are cited in the reference list below. The reference list excludes 58 papers (out of the 256 read) which provided data from vegetation surveys but where no *Dianthus* species were identified.

Attachment 6. Database information

Search terms

Databases previously identified were re-examined for any new entries listing *Dianthus caryophyllus* or *Dianthus godronianus* since the last monitoring report. In the event neither of these species were found, the databases were checked for the following species;

- *Dianthus arrostii* C.Presl
- *Dianthus caryophyllus* var. coronarius L.
- *Dianthus gasparrinii* Guss.
- *Dianthus longicaulis* Ten.
- *Dianthus saxicola* Jord
- *Dianthus sículus* C.Presl
- *Dianthus sylvestris* subsp. *longibracteatus* (Maire) Greuter and Burdet
- *Dianthus sylvestris* subsp. *boissieri* (Willk.) Dobignard
- *Dianthus tarentinus* Lacaita
- *Dianthus virgatus* Pasq.

Results

Results of the database survey are summarized in tables 1 and 2 of this attachment, Each table has the following information:

| | |
|----------------------------|---|
| Site no. | Internal number allocated to each website for cross reference. |
| URL | Address of the website |
| Site name | Title of the website, database, flora or checklist according to the website |
| Site geographical coverage | Area and/or country covered by website |
| Site description | Brief description of the information provided at the website |
| Access date | Date the website was reviewed for this report |
| Search outcome | Table 1 - Websites in which observations of carnation or <i>Dianthus caryophyllus</i> are described. For existing websites, the observations described have been made since the 2021 monitoring report was compiled. Websites reviewed for the first time are noted. |
| | Table 2 - Websites in which no observations of carnation or <i>Dianthus caryophyllus</i> are described. For websites we have previously reviewed and no observations of carnation or <i>Dianthus caryophyllus</i> have been made since the last monitoring report, we have noted the search outcome as <i>No new information</i> . For websites we have reviewed for the first time, this fact is noted and a brief description is provided of the coverage of the <i>Dianthus</i> genus provided at the website. |

Table 1. Websites in which observations of carnation or *Dianthus caryophyllus* were described.

| Site no. | URL | Site name | Site geographical coverage | Site description | Access date | Search outcome |
|----------|---|--|------------------------------------|--|--------------|---|
| 1 | www.gbif.org | Global biodiversity information Network | Worldwide | Searchable collation of multiple datasets. | 10 July 2022 | Two Europe observations of <i>Dianthus caryophyllus</i> both in 2022 and both from Norway ⁷ . |
| 2 | https://www.inaturalist.org/observations | i-naturalist | Worldwide | Searchable dataset with access to record photos and IDs. | 11 July 2022 | 432 records for <i>Dianthus caryophyllus</i> , including synonyms, since July 2021. All wild type apart from 6 cultivated, non-transgenic, carnation. |
| 3 | https://www-mittelmeerflora-de | Mediterranean and Alpine flora | Europe | Checklist with superb photographs. | 12 July 2022 | Newly identified database. <i>D.caryophyllus</i> is illustrated with images of cultivated carnation or other wild type <i>Dianthus</i> species. 113 <i>Dianthus</i> species are listed. |
| 4 | https://hirc.botanic.hr/fcd/ | Flora Croatica database | Croatia | Searchable dataset of herbaria, bibliographies and images. | 12 July 2022 | <i>Dianthus caryophyllus</i> ssp. <i>godronianus</i> is listed with an image of a five-petal flower. |
| 5 | http://www.cbn-alpin-icno.fr/Phototheque/categories | National Alpine botanical conservatory | Alps and foothills, France | Searchable datasets of herbaria sheets and photographic images, with collector ID. | 11 July 2022 | Newly identified website. Images of <i>Dianthus gordorianus</i> are of five petal wild type. |
| 6 | http://www.tela-botanica.org with links to http://siflore.fcbn.fr | Tela botanica | France and Corsica | Searchable datasets and bibliography with access to record photos and IDs. | 10 July 2022 | Two observations of <i>D.caryophyllus</i> and two of <i>D. godronianus</i> . Three are five petal wild type. |
| 7 | https://nature.silene.eu | Silene nature | Provence-Alpes-Côte d'Azur, France | Searchable datasets and bibliography with access photos and distribution. There are no means to access the record IDs. | 13 July 2022 | New additions are of <i>Dianthus</i> species synonymous to <i>D. caryophyllus</i> , Photos are of five petal wild type. |
| 8 | http://www.naturedugard.org | Observatoire du patrimoine naturel du Gard | Languedoc-Roussillon, France | Searchable dataset with access to record photo gallery and record IDs. | 10 July 2022 | Five observations of <i>D.caryophyllus</i> . Sites were Saint-Martin-de-Valgalmes, Mons, Canaules-et-Argentières, Gailhan and Saint-Dionizy. |
