

# Highly pathogenic avian influenza

## Current Situation in Germany

SCoPAFF-meeting July 2023

# Evolution in wild birds

Still high level of HPAI cases in wild birds,  
mainly affected species: colony breeders/seabirds

## Situation in **poultry** and **captive birds**

Period of time	Number of outbreaks
Active outbreaks on 07/07/2023 (24/05/2023)	<b>11</b> <b>(26)</b>
New from 24/05/2023 (~last PAFF) until 11/07/2023	<b>2</b> Zoo: 0 Poultry: 2 NON-Poultry: 0
New season from 15/07/2022 until 11/07/2023	<b>223</b> <b>(212 lifted)</b>

# Evolution: Poultry and captive birds

New outbreak: Geese for fattening, measures are in place, epidemiological investigation is ongoing

Active outbreaks on 11/07/2023

DNK is part of the surveillance zone

## Summary

- Number of cases in **wild birds** still high
- Infection pressure in the wild bird population is increasing because the colonies are now dissolving and moving further away from the colonies and the risk of spread at that time is high
- Number of HPAI outbreaks in **poultry** and **captive birds** nonetheless **low**
- Biosecurity measures in place
- Still essential: awareness
