

Implementation of **Bovine and Small Ruminant's** Brucellosis Eradication Programmes in Portugal

2017

PAFF Standing Committee
Brussels, 13 June 2018

Bovine

Brucellosis Eradication Programme

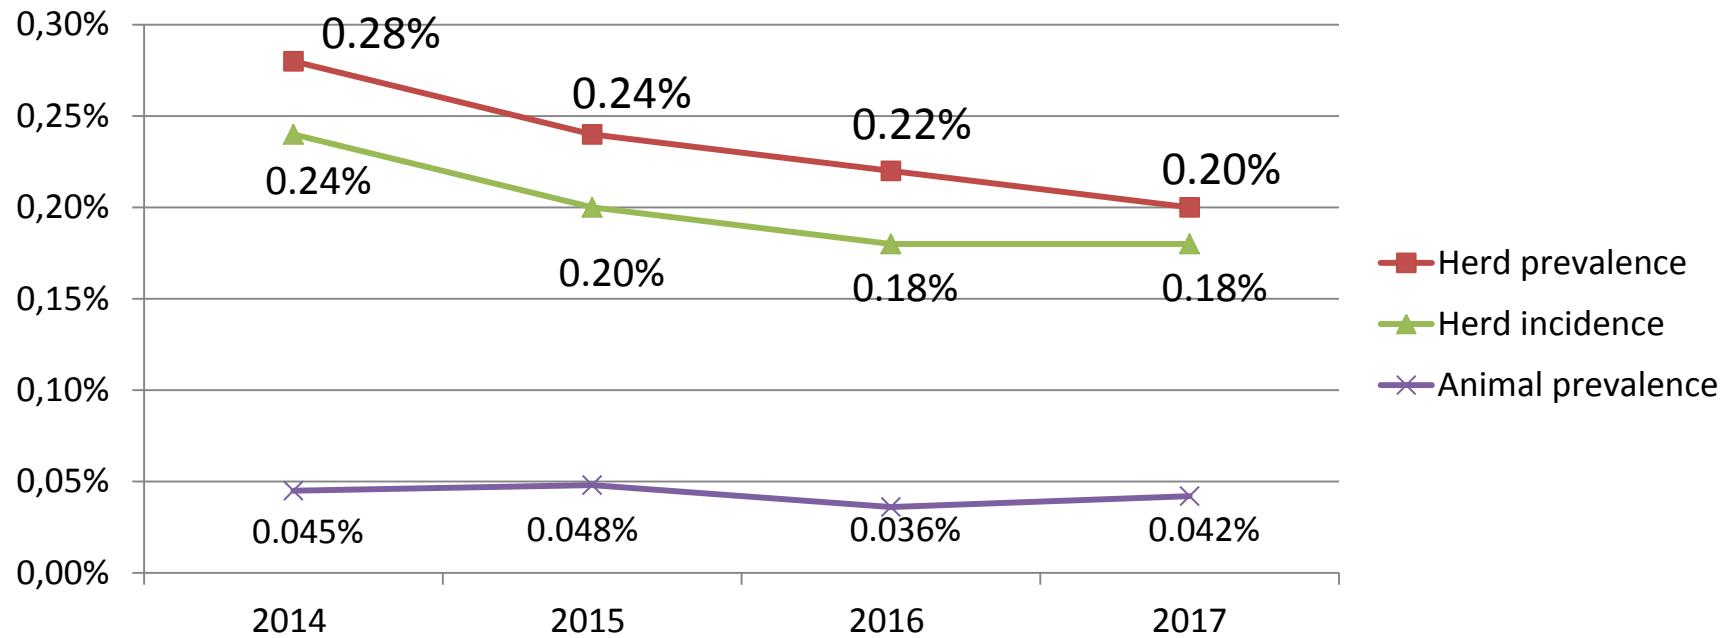

2017

Bovine brucellosis eradication programme

Implemented in 4 regions of the Continent
and 3 islands of the Azores

Evolution in the past years

Positive herd: those with at least 1 serologically positive animal (RB+ and CF>20 IU/mL)

Bovine brucellosis eradication programme

Results 2017 (herds)

DSAVR	In the program	% Tested	with 1 positive animal	New positives	% with 1 positive animal (prev.)	% new positive (incidence)	Bacteriology positive	Non indemne 31/12/2017	Suspended 31/12/2017
Norte	16042	99.9	31	31	0.19	0.19	18	22	46

RB51 Vaccination

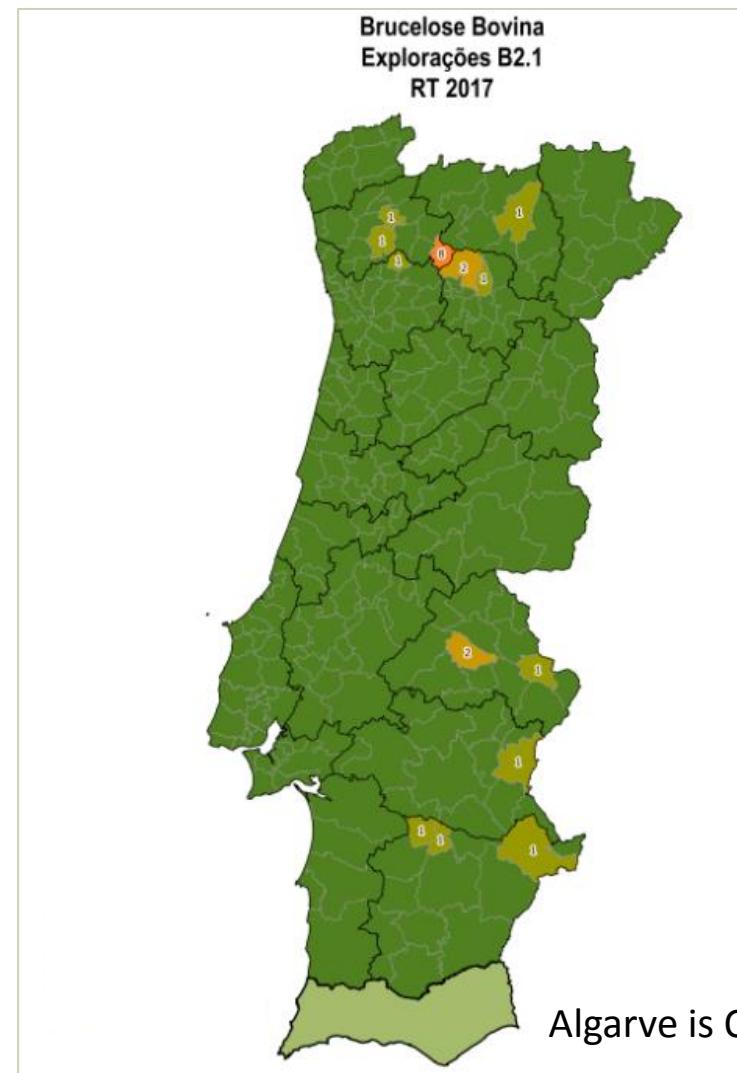

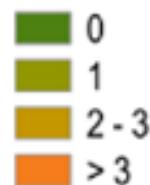

Bovine brucellosis eradication programme

Results 2017

Herds with confirmed infected status
31 December 2017
- 22 herds

Infected herds

Bovine brucellosis eradication programme

Challenges and expected targets

- Control of contacts in pastures in certain areas
- Early detection
- Main measures are:
 - reinforcement of **epidemiological investigation**
 - investigation of abortions
 - Involvement of farmers and the rural community

Variation from 2014 to 2017	0.28% → 0.20% <i>Herd prevalence</i> 29% decrease	0.24% → 0.18% <i>Herd incidence</i> 25% decrease	Targets 2018* Prev 0.17% Incid 0.14%
-----------------------------	---	--	--

Foreseen targets → **2018: 0.14%** **2019: 0.10%** **2020: 0.05%** **2021: 0%**

Brucellosis Eradication Programme

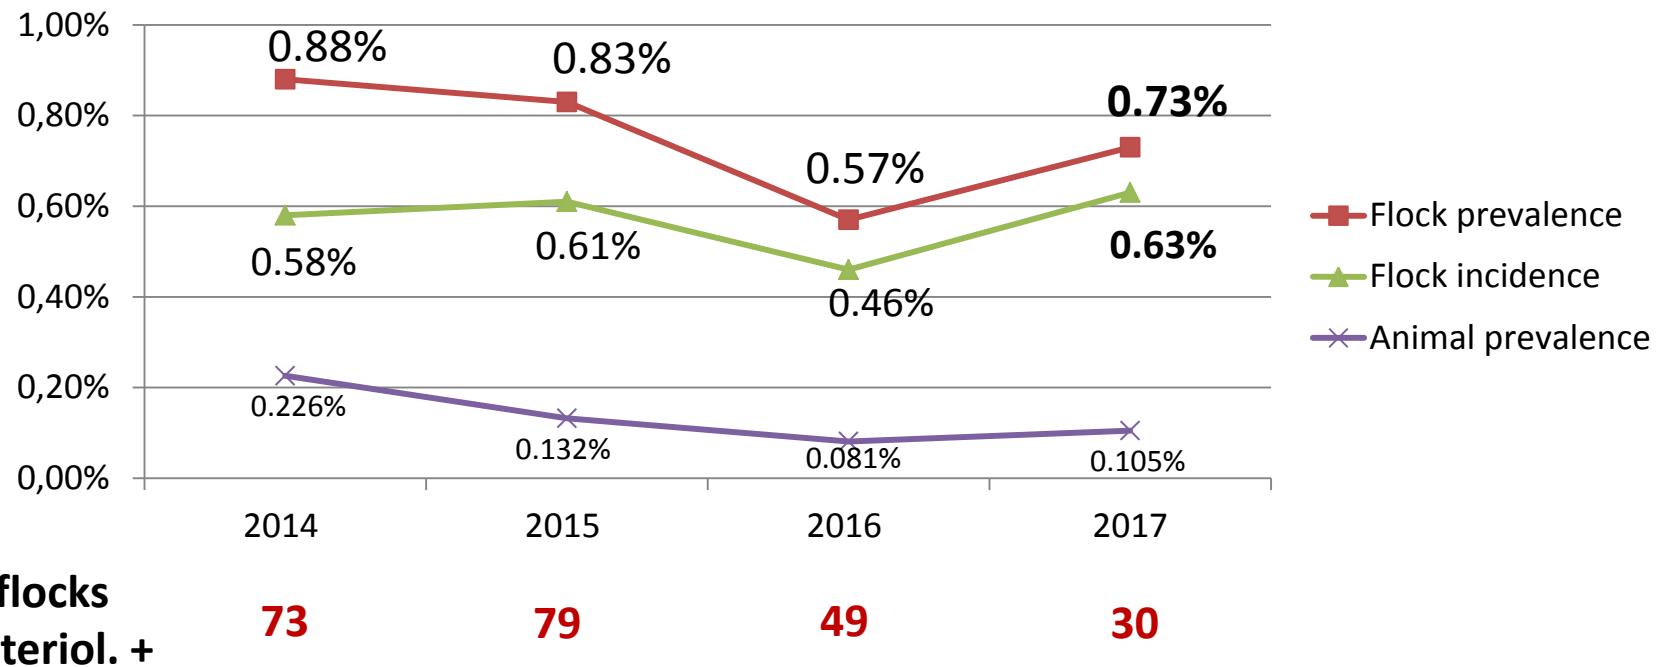

2017

SR brucellosis eradication programme

Implemented in 5 regions of the Continent

Evolution in the past years

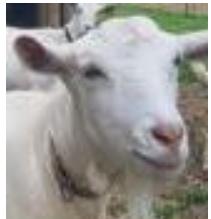

Nº flocks
bacteriol. +

- The increase in % of positive holdings is mainly related to the Region N where Rev1 Vac is applied :
 - 62% of positive holdings have only positive vaccinated animals (204/329)
 - From those 80% (164) have 1 or 2 positive vaccinated animal – bacteriology NEG
- In 2017 - discontinuation of the protocol used when there is suspicion of non-specific reactions

SR brucellosis eradication programme

Results 2017

**Flocks with confirmed infected status
31 December 2017
- 45 flocks**

SR Brucellosis eradication programme

Challenges and expected targets

- Thorough **epidemiological investigation** of flocks with positive results
- Reinforce **coverage** of programme (small flocks)
- Animal **movement control** (pre-movement testing)
- **Farmers/vets involvement:** monthly meetings in the most affected regions
- **Total slaughter** of infected flocks
- **Protocol** for management of Positive Serological Reactions not related to infection with *B. melitensis*
- Revision of all **diagnostic procedures**, from sample collection to laboratory results

Variation from 2014 to 2017	$0.88 \rightarrow 0.73\%$ <i>Flock prevalence</i> 17% decrease	$0.58 \rightarrow 0.63\%$ <i>Flock incidence</i> 8% increase	Targets 2018* Prev 0.58 Incid 0.43
--------------------------------	---	---	---

Foreseen targets → **2018: 0.58%** **2019: 0.4%** **2020: 0.2%** **2021: 0.1%** **2022: 0.05%**
2023: 0.02% **2024: 0%**
