## Measures

### **3/10 km zones:**

Measures according art. 18-29 Directive 2005/94/EG (protection zone)

### **Whole of the Netherlands:**

- Aim: minimise contacts -> regionalisation (slaughter transports, feed, eggs), no bird exhibitions, no visitors on poultry premises.

NB: all slaughter transports are clinically tested (and ducks PCR tested)

- Aim: lower/stabilise poultry density -> no day-old chickens to poultry farms in the Netherlands

NB: export of day-old chicks is allowed

- Aim: mitigating risk wild birds -> hunting forbidden, outdoor housing prohibited
