

# NUTRI SCORE

**THE FRONT OF PACK NUTRITION LABELLING SCHEME  
RECOMMENDED IN FRANCE**

Dr Michel Chauillac

Direction générale de la santé

Ministère des solidarités et de la santé, France

® A registered trademark owned by Santé Publique France

# **A simple, readable, understandable graphic system**

## **A triple objective**

- Inform the consumer at the time of purchase to include the nutrition dimension in the selection criteria (in addition to price, practicality, taste, notoriety, label ...)
- Encourage producers to improve the nutritional quality of products
- Facilitate Health Professional advice on Nutrition

## **For the consumer a triple purpose:**

- Compare the nutritional quality of foods from different categories (ex : biscuits/dairy products/beverages....)
- Compare the nutritional quality of foods belonging to the same category (ex : breakfast cereals)
- Compare the nutritional quality of the same food offered by different brands ( ex : filled cereals)

# Score FSA

Calculation of the FSA/OFCOM score

Tableau de valeurs nutritionnelles

VALEURS NUTRITIONNELLES MOYENNES	POUR 100 g	POUR 30 g (1)	% (2) POUR 30 g
Energie	2256 kJ 541 kcal	677 kJ 162 kcal	8%

<b>Total</b>	<b>Points A = (a) + (b) + (c) + (d) [0 – 40]</b>							<b>Points C = (a) + (b) + (c) [0 – 15]</b>				

## Adaptations for 3 food groups:

- Added fats: butter, oils,...
- Cheeses
- Beverages

## 2. Score Final entre -15 et 40 points.

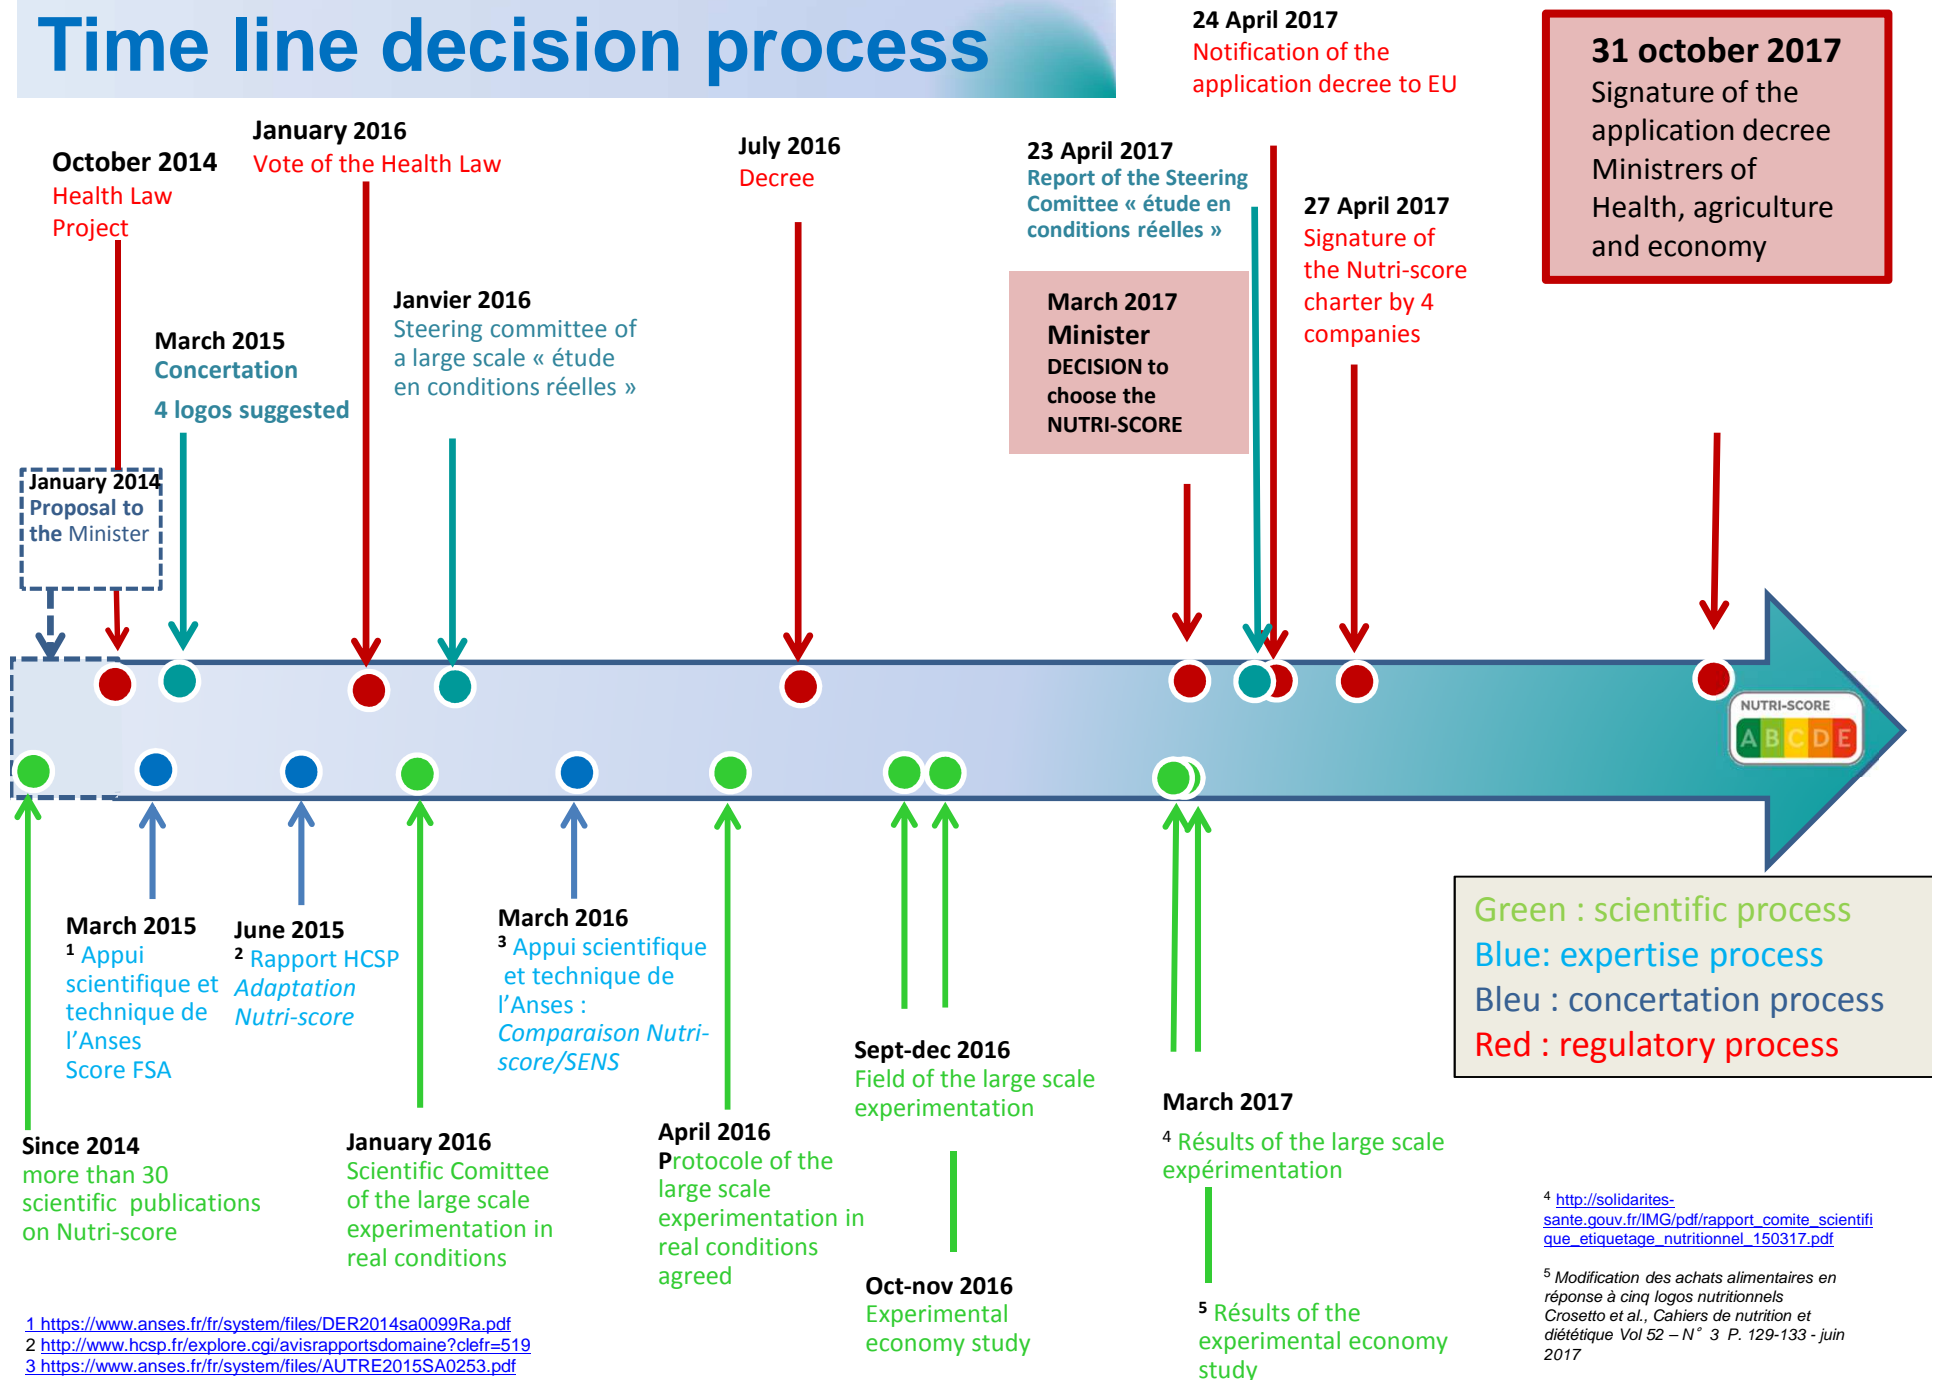

## 3. Attribution des classes:

Aliments solides (points)	Boissons (points)	Couleur
Min à -1	Eau	Vert foncé
0 à 2	Min à 1	Vert clair
3 à 10	2 à 5	Jaune
11 à 18	6 à 9	Orange clair
19 à Max	10 à Max	Orange foncé

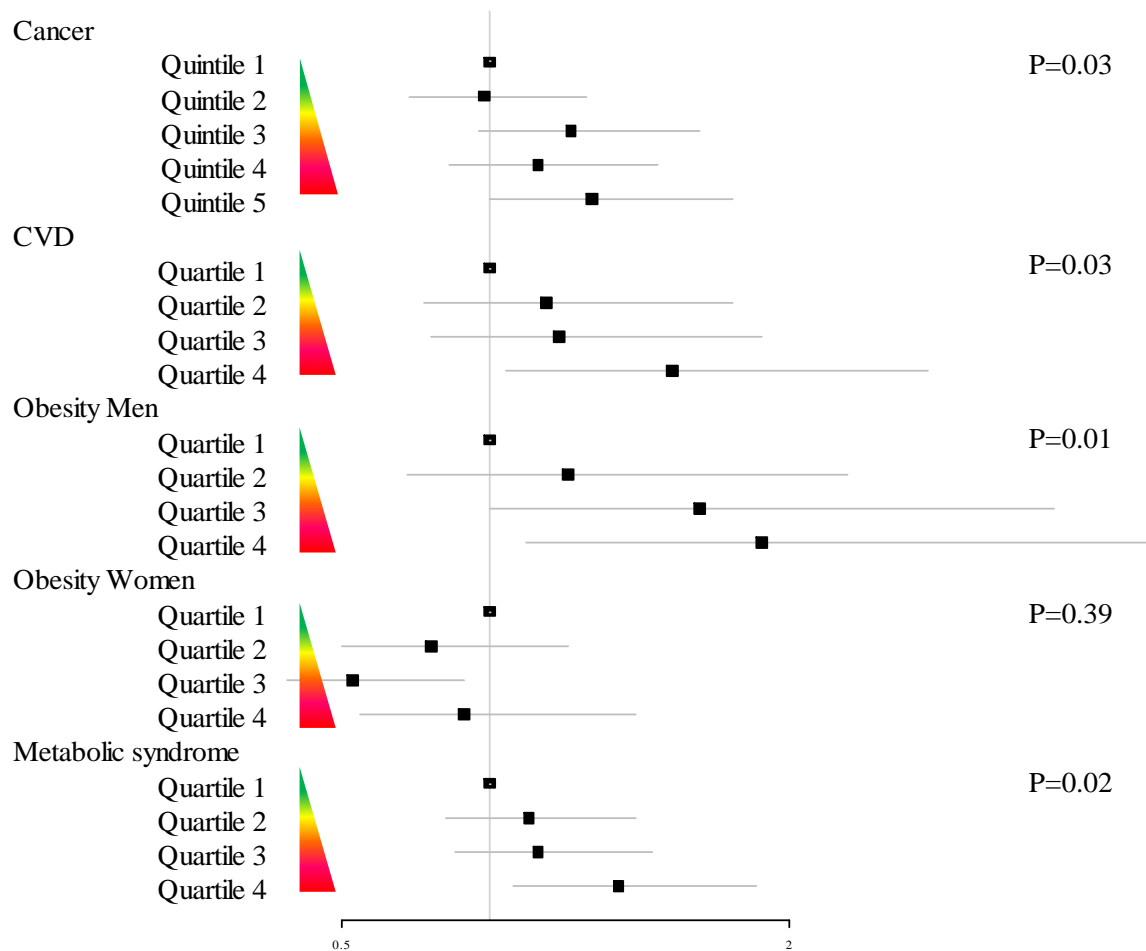

Vert : meilleure qualité Orange foncé : moins bonne qualité

# Time line decision process

# Prospective associations with health outcomes

→ the SU.VI.MAX cohort (6435 subjects, 13y follow-up)

Higher FSA-NPS DI (*overall, poorer diets*), was associated with a higher risk of developing a chronic disease

- + 34 % for cancers
- + 61 % CVD
- + 61 % for obesity (in men)
- + 43 % for metabolic syndrome

→ the NutriNet-Santé cohort study (46 864 subjects, 6 y follow-up)

- + 40 % CVD
- + 52 % for breasts cancers

## Prospective associations with health outcomes

→ the EPIC study: 524,000 healthy men and women aged between 25 and 70 y recruited from 23 centres in Denmark, France, Germany, Greece, Italy, the Netherlands, Norway, Spain, Sweden and UK

After 15.3 years of follow-up, 49,794 total cancer cases were recorded

A higher FSAm/HCSP-NPS DI score (*indicating lower nutritional quality of the food consumed*), was associated with

- **an increased risk of total cancer** (HR Q5 vs Q1 (95%CI)=**1.07** (1.03-1.10), p-trend<.0001),
- **elevated risks of cancers of the colon-rectum, kidney, upper aero digestive tract and stomach, lung and prostate for men, and liver and post-menopausal breast for women** (all p<0.05).

# Understanding and Purchasing intention *(large scale experimentation)*

60 supermarkets (10 for each label + 20 controls), 10 weeks

Improvement of the nutritional quality of the food products in the shopping carts

+ 4,5%

+ 3,9%

+ 3,3 %

0 %

**Nutri-Score was associated with the largest improvement in the nutritional quality of the purchased items, followed by MTL and SENS.**

## ○ *Sub-group analysis*

Nutri-Score: **higher impact in subjects buying less expensive products (FSA -0.312 vs -0,267 for the whole population), MTL (-0.229 vs -0,233 for the whole population);**

Nutri-Score: no deterioration of the nut quality of the shopping cart in any subgroup

## Spontaneous understanding

- Nutri score 92% ;
- MTL 29%

# Experimental economy

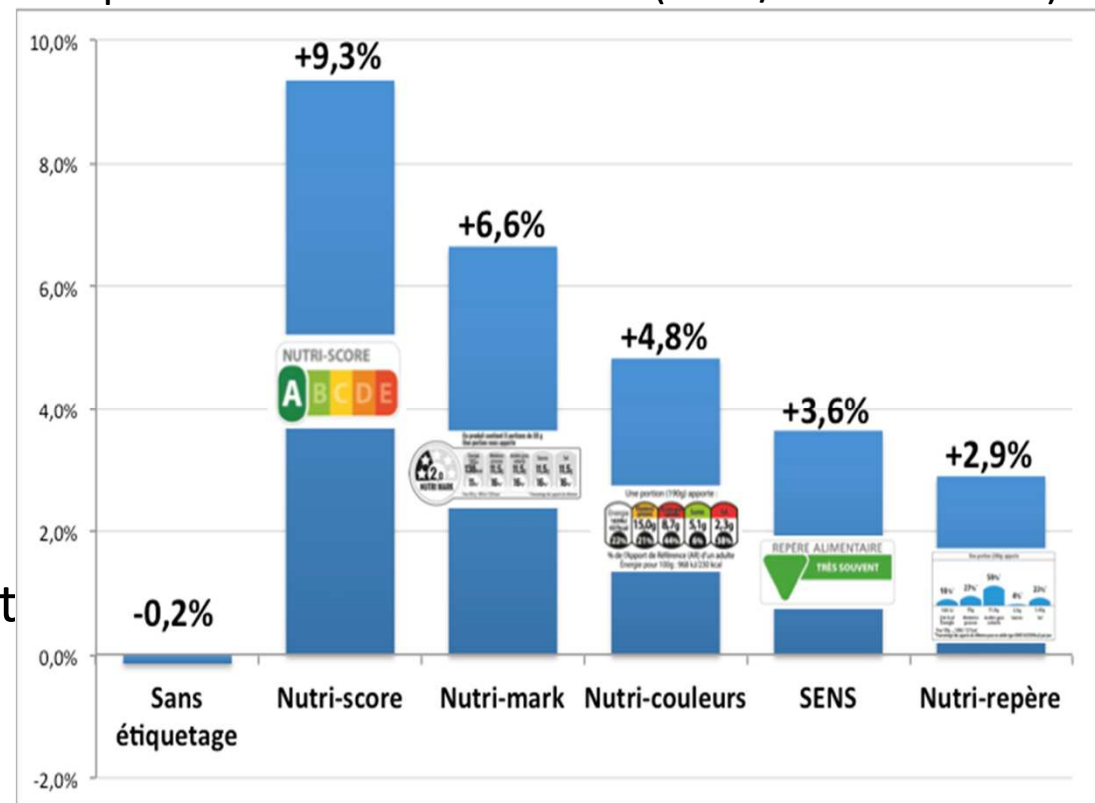

## Test in experimental economy

- 5 labels tested (+HSR=NutriMark)
- Constitution of a shopping cart before an after exposure to a label

## Results

- The Nutri-Score is associated with the highest improvement
- **In particular for disadvantaged groups**

Improvement of the FSA score (after/before a label)

Crosetto et al., 2017

# Evaluation/Monitoring

**Decree 16th July 2016** : « Une évaluation du dispositif [...] est réalisée par les ministres chargés de la santé, de la consommation et de l'agroalimentaire au plus tard dans un délai de trois ans »

Companies choosing Nutri score send the nutritional composition of the foods to the Observatory on nutritional food quality (OQALI) .

- Every 3 months OQALI monitors the number of products with the Nutri Score label, their category (in shops and on line) ;
- Every year :
  - Their nutritional composition will be compared with the foods of the same category without Nutri score (with boxplot) ;
  - Comparison of the nutrient content before and after Nutri score for some specific brands, when feasible (using to the OQALI data base)
- In September 2018 : First analysis of the market share per category and first examples of results from the yearly monitoring

Evaluations of Consumers habits will be carried out (what use of Nutri-Score some times after large implementation)

**A global evaluation by the end of 2020**

# Challenges

- Increase the market share of the products with Nutri Score
  - 55 companies including large producers (Danone, Fleury Michon, McCain, Marie... ) large retailers (Auchan, Leclerc, Intermarché, Casino), and many small companies are involved as of April 10th 2018 ;
  - An estimate of over 15% of the market share
  - An on line official « calculator » to help them
  - First packages with Nutri-Score were on shelves in September 2017. Their number keep increasing
  - Nutri-score is on many E- Commerce websites
- Initiate a real large reformulation movement
- A decision following the « Etats Généraux de l'alimentation » to have the Nutri Score in collective catering
- Increase the awareness and demand from the consumers
  - Institutional Communication and from Companies
  - General public, medical doctors, teachers
- At International level : in 12 countries (6EU) : a comparison of the FoP labels (results in september 2018)
