Country or territory: Slovakia

Disease name: A.S.F. in domestic pigs

ADIS reference	Primary or secondary	Country-Administrative zone	Species
SK-ASF-2021-00436	Primary	SVK-Banskobystrický	Swine

Details of the outbreak

Date of suspicion: 21/06/2021 Date of confirmation: 22/06/2021

Preliminary cleaning & disinfection date (if applicable): -

Date of submission: 23/06/2021

ASF in domestic pigs- Lučenec farm - epidemiological investigation

- ASF monitoring in place every week (2 samples) 14.6.-18.6. (negative results)
- The first clinical signs by 6 fattening pigs 19.-20.6.2021 in appetence, fever 40-41
 °C, mortality, pathological changes observed-splenomegaly
- 21.6. 2021 confirmation (all samples of <u>dead swine</u> positive)
- Expected introduction of ASFV 11.6.-15.6.2021
- Movement pigs from the farm in June 2021 only slovak slaughterhouses
- No movement of pigs from the farm into the MS
- High level of biosecurity the establishment of the 'clean' and 'dirty' areas for personnel, stock-proof fencing, cleaning and disinfection of the premises...
 - Possible source Fomites? Insects? Rodents?
- contact WB/domestic swine practically excluded (no footprints of WB; solid fence)

Summary – domestic pigs

- All veterinary measures in outbreak, protection zone and surveillance zone in force/ordered/adopted
- New infected zone III in region Lučenec
- Eradication of ASF outbreak finished
- No further ASF outbreak in the infected region

Acitivities and competences of the SVFA/CVO

• The Chief Veterinarian of the Slovak Republic (CVO) plays a key role in the entire process of protection of the Slovak Republic and it is highly desirable that he be temporarily granted extensive competencies and powers.

Key temporary powers during the ASF crisis include to enable:

- the extraordinary subordination of hunting organizations and hunting grounds to the competence of CVO
- the imposition of measures aimed at increasing the wild game hunting plan directly to hunting grounds (In districts without a positive finding in wild game and in a buffer zone next to the districts with a positive finding in wild game, the wild game must be reduced **to close to 0**. This rule must be applied across the board, with no exceptions for protected areas of any kind of . degree.)
- effective and efficient controls of the hunting plans based on the samples examined
- an extraordinary regulation of the exercise of the hunting right for all hunters, regardless of the local affiliation to the hunting ground
- To allow the authorization of unauthorized hunting practices

Moreover

- Ask other ministries for co-operation and request activities related to the elimination of the spread of the disease
- To enable the granting of an exemption for forms of hunting and baiting also for protected areas of the Slovak Republic
- the performance of rodent control, disinfection, disinfection if the situation requires

Thank you for your attention
